

1. Administrative & Study Identification

Full Study Title A Long Term Extension Study to Evaluate the Safety and Efficacy of Afimkibart (R07790121) in Participants With Atopic Dermatitis **Short Title/Acronym** Velarite-LTE **Protocol Number** CS45943 / 2025-520771-59-00 **NCT Number** NCT07223697 **Sponsor Name** Hoffmann-La Roche **Investigational Product** Afimkibart (R07790121, PF-06480605, RVT-3101) **Phase of Development** Phase II **Medical Monitor** Hoffmann-La Roche Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective

- **Primary Objective:** To evaluate the long-term safety and efficacy of Afimkibart (R07790121) as a subcutaneous injection in patients with atopic dermatitis who participated in previous afimkibart clinical trials.
- **Secondary Objectives:** To assess changes in clinical outcomes through patient-reported and clinician-reported instruments (including DLQI and POEM), and to evaluate long-term pharmacokinetics (PK).

2.2 Background & Rationale To address the gap in treatment for patients with moderate to severe atopic dermatitis (AD). Afimkibart is a first-in-class treatment targeting tumor necrosis factor-like ligand 1A (TL1A). Unlike traditional treatments like topical corticosteroids or calcineurin inhibitors, which mainly focus on reducing inflammation on the skin's surface, Afimkibart offers potentially more systemic relief and a novel mechanism of action, which could lead to improved outcomes for patients who haven't responded well to existing therapies.

3. Study Design & Methodology

3.1 Design Framework

- **Study Type:** Interventional (Extension Study)
- **Control Type:** Single-arm (Non-Randomized, parallel assignment)
- **Blinding:** Open-label
- **Randomization:** Non-Randomized

3.2 Planned Enrollment & Duration

- **Target \$\$\$:** Approximately 120 participants

- **Number of Sites:** Multicenter (Europe, Canada, US)
 - **Estimated Study Start:** Q1 2026
 - **Estimated Primary Completion:** To be determined based on LTE duration
-

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Age ≥ 18 years. 2. Ability and willingness to comply with all aspects of the protocol including completion of the efficacy assessments (EASI and IGA), clinical outcome assessment instruments (DLQI, POEM), and safety and PK sample collections for the duration of the study. 3. Parent Clinical Trial-Specific Criteria: Study CS45570 participants who continued to be evaluated at the Week 36 follow-up visit and achieved $\geq$ EASI50 response from study baseline.

4.2 Exclusion Criteria 1. Evidence of other skin conditions that would interfere with the assessment of AD. 2. Withdrawal of consent and/or premature discontinuation from the parent study, or any permanent discontinuation of study drug in the parent study. 3. History of severe allergic reaction or anaphylactic reaction to any biologic agent or known hypersensitivity to any component of Afimkibart.

5. Intervention & Treatment Plan

5.1 Investigational Regimen

- **Dosage/Frequency:** Administered as per the schedule defined in the protocol.
- **Route of Administration:** Subcutaneous (SC) injection.
- **Duration of Treatment:** Long-term extension.

5.2 Concomitant & Prohibited Therapy

- **Permitted:** Use of a simple, additive-free moisturizer daily.
 - **Prohibited:** Participants must have stopped using oral and injectable corticosteroids, certain topical treatments for eczema, and systemic therapies like methotrexate and cyclosporine at least 4 weeks before the parent study started and during the study.
-

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures
Screening / Roll-over	Day -14 to 0	Informed Consent, verification of parent trial completion, Baseline EASI / IGA Assessment
Baseline	Day 0	First LTE Dose (SC), DLQI/ POEM Questionnaires, Safety Labs
Interim	TBD	SC injection administration, Efficacy Assessment, PK Sample Collection
End		

of Study | TBD | Final Vital Signs, Exit Interview, IP Accountability, Final PK / Safety evaluation |

(Note: Exact visit windows are governed by the internal CS45943 long-term extension schedule)

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint * **Definition:** Long-term safety profile and incidence of treatment-emergent adverse events (TEAEs), and maintenance of clinical efficacy from the parent study. *

Measurement Method: Clinical assessment utilizing the Eczema Area and Severity Index (EASI) and the Investigator's Global Assessment (IGA).

7.2 Secondary & Exploratory Endpoints * Dermatology Life Quality Index (DLQI) scores * Patient-Oriented Eczema Measure (POEM) scores * Pharmacokinetics (PK)

8. Safety & Adverse Event Reporting

- **Adverse Event (AE) Monitoring:** Standard collection via regular study visits and safety labs.
 - **Serious Adverse Events (SAEs):** Reported within 24 hours of site awareness.
 - **Data Monitoring Committee (DMC):** Internal/External committee details utilized for continuous evaluation of safety data throughout the LTE Phase.
-

9. Statistical Analysis Plan (SAP) Summary

- **Analysis Populations:** Intent-to-Treat (ITT) for efficacy, Safety Set for all participants receiving at least one dose of Afimkibart in the extension.
 - **Sample Size Justification:** Descriptive and long-term cohort tracking (\$N \approx 120\$) carried over from the parent clinical trial CS45570.
 - **Handling of Missing Data:** Last Observation Carried Forward (LOCF) or Multiple Imputation for longitudinal AD symptom scoring.
-

10. Quality Assurance & Regulatory Compliance

- **GCP Compliance:** This study will be conducted in accordance with Good Clinical Practice (GCP) and the Declaration of Helsinki.

- **Monitoring Plan:** Regular onsite and remote monitoring visits to ensure integrity of patient-reported outcomes and proper SC administration of Afimkibart.
 - **Audit Trail:** Detailed eCRF locking mechanisms and electronic capture for PROs (Patient-Reported Outcomes) like DLQI and POEM.
-

11. Study Identifiers & Governance

- **Primary ID:** CS45943 / 2025-520771-59-00
 - **Registry Number:** NCT07223697
 - **Sponsor/Lead Organization:** Hoffmann-La Roche
 - **Study Title:** Velarite-LTE
 - **Official Regulatory Title:** An Extension Study To Evaluate the Long-Term Safety and Efficacy of Afimkibart (R07790121) in Patients With Atopic Dermatitis Who Participated in Previous Afimkibart Clinical Trials
-

12. Clinical Framework (Atopic Dermatitis Specific)

- **Primary Condition:** Atopic Dermatitis (AD)
 - **Diagnosis Threshold:** Confirmation by a dermatologist according to the Hanifin/Rajka criteria at least 1 year prior to initial screening.
 - **Medical Methodology:** Biologic targeted therapy (Anti-TL1A monoclonal antibody).
 - **Optimization Target:** Sustained $\geq$ EASI50 response and long-term relief from skin inflammation and pruritus.
-

13. Study Procedures & Methodology

- **Management Pathway:** Long-Term Extension Maintenance Therapy
 - **Education Protocol (HCP):** Subcutaneous injection administration training
 - **Education Protocol (Patient):** Compliance tracking for standard daily emollient use
 - **Quality Audit Mechanism:** Periodic review of DLQI and POEM instruments
-

14. Observation & Follow-Up Schedule

- **Total Duration:** TBD (Long Term Extension)
 - **Onsite Visit Cadence:** TBD
 - **Remote Monitoring Frequency:** Intermittent PK/PRO review
 - **Checklist Review Interval:** Regular symptom tracking as per LTE guidelines
-
