

1. Administrative & Study Identification

Full Study Title: Anifrolumab Real-world Treatment Outcomes in Systemic Lupus Erythematosus **Short Title/Acronym:** SLE-ARTEMIS
Protocol Number: D3461R00082 **NCT Number:** NCT06673043 **Posting ID:** 159991143422265266 **Sponsor / Company Name:** AstraZeneca
Investigational Product: Anifrolumab **Phase of Development:** Not Applicable **Medical Monitor:** AstraZeneca Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To collect longitudinal data on the characteristics of patients with systemic lupus erythematosus (SLE) and evaluate the clinical outcomes of anifrolumab administered in the scope of routine clinical practice. **Secondary Objectives:** To evaluate the changes from the index date in the Systemic Lupus Erythematosus Disease Activity Index 2000 (SLEDAI-2K) score and the Physician Global Assessment (PGA) score over a 24-month follow-up period.

2.2 Background & Rationale This is a Polish multicenter observational (non-interventional) cohort study aiming to gather real-world evidence. The study will assess the management and clinical outcomes of patients with SLE who receive anifrolumab within the framework of the National Drug Program (NDP) in Poland. This addresses the need for real-world data regarding the effectiveness and routine clinical management of SLE patients treated with anifrolumab.

3. Study Design & Methodology

3.1 Design Framework Study Type: Observational, Cohort Study **Control Type:** Single-arm (Non-interventional) **Blinding:** Open-label **Randomization:** N/A

3.2 Planned Enrollment & Duration Trial Status: RECRUITING (Currently recruiting participants) **Targeted Enrollment (\$N\$):** 100 adult patients **Number of Sites:** Multicenter (~11 sites in Poland) **Estimated Study Start:** 28-Feb-2025 **Estimated Primary Completion:** 30-Jun-2028

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Adult (aged \$ge 18\$ years old) patients with SLE who received anifrolumab treatment within the

frames of the NDP in Poland. 2. Patients willing to participate in the study and who have signed an Informed Consent Form (ICF).

4.2 Exclusion Criteria 1. Those who participated in an anifrolumab clinical trial in the past, and/or those who participated/plan to participate in a clinical trial on/after the date of the first anifrolumab infusion through the NDP. 2. Cognitive incapacity, unwillingness, or language barriers precluding adequate understanding or cooperation.

5. Intervention & Treatment Plan

5.1 Investigational Regimen **Drug Name:** Anifrolumab **Trade Name:** Saphnelo **Preferred UMLS Name:** Anifrolumab therapy **ATC Code:** L04AA51 **Dosage/Frequency:** Anifrolumab administered as per standard routine clinical practice within the National Drug Program (NDP). **Route of Administration:** Intravenous (IV) Infusion. **Duration of Treatment:** Up to 30 months total observation period (incorporating ~6 months of retrospective baseline data and ~24 months of prospective follow-up). **EMA URL:** [Saphnelo EPAR Product Information](#)

5.2 Concomitant & Prohibited Therapy Permitted: Standard maintenance doses of immunosuppressive drugs, biologics, antimalarials, and systemic corticosteroids (e.g., prednisone-equivalent dose ≤ 7.5 mg/day) as dictated by standard SLE maintenance guidelines. **Prohibited:** Concurrent participation in other interventional clinical trials involving anifrolumab.

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures
Screening/Baseline	Index Date	Informed Consent, Medical History, Retrospective Data Collection (~6 months prior)
Interim 1	Month 6	Disease Activity Assessment (SLEDAI-2K, PGA), Corticosteroid dose tracking
Interim 2	Month 12 & 18	Disease Activity Assessment, Routine Safety Labs, Efficacy Assessment
End of Study	Month 24	Final clinical assessment (SLEDAI-2K, PGA), LLDAS evaluation, Exit review

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint * Change from index date in Systemic Lupus Erythematosus Disease Activity Index 2000 (SLEDAI-2K) score.

7.2 Secondary Endpoints * Change from index date in Systemic Lupus Erythematosus Disease Activity Index 2000 (SLEDAI-2K) score. * Change from index date in Physician Global Assessment

(PGA) score. * Proportion of patients attaining the composite endpoint of modified SLE Responder Index (mSRI).

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Real-world observational monitoring via routine HCP interactions and medical record extraction. **Serious Adverse Events (SAEs):** Standard pharmacovigilance reporting timelines as dictated by non-interventional post-marketing surveillance guidelines. **Data Monitoring Committee (DMC):** Managed via AstraZeneca's internal real-world evidence and pharmacovigilance teams.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Observational Cohort (All enrolled SLE patients receiving anifrolumab via NDP with signed ICF). **Sample Size Justification:** Target Enrollment of 100 based on the estimated real-world population eligible for the NDP anifrolumab track in the participating Polish centers. **Handling of Missing Data:** Standard handling procedures for missing observational data (e.g., Multiple Imputation or analyzing as observed without explicit imputation, as pre-specified in the observational SAP).

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with the Guidelines for Good Pharmacoepidemiology Practices (GPP) and the Declaration of Helsinki. **Monitoring Plan:** Periodic source data verification against electronic health records (EHR) to ensure registry accuracy. **Audit Trail:** Electronic Data Capture (EDC) system with full audit trails and periodic data clarification reviews.

11. Study Identifiers & Governance

Primary ID: D3461R00082 **Registry Number:** NCT06673043 **Posting ID:** 159991143422265266 **Sponsor/Lead Organization:** AstraZeneca **Study Title:** SLE-ARTEMIS **Official Regulatory Title:** Anifrolumab Real-world Treatment Outcomes in Polish Patients With Systemic Lupus Erythematosus (SLE). Multicenter, Non-interventional Study

12. Clinical Framework (SLE Specific)

Disease Area / Preferred Name: Lupus Erythematosus, Systemic (Lupus) **Semantic Type:** Disease or Syndrome **Diagnosis Threshold:** Confirmed SLE diagnosis qualifying for the National Drug Program

(NDP) **Disease Definition:** A chronic, relapsing, inflammatory, and often febrile multisystemic disorder of connective tissue, characterized principally by involvement of the skin, joints, kidneys, and serosal membranes. It is of unknown etiology, but is thought to represent a failure of the regulatory mechanisms of the autoimmune system. The disease is marked by a wide range of system dysfunctions, an elevated erythrocyte sedimentation rate, and the formation of LE cells in the blood or bone marrow.

Classification Codes: * **MeSH Code:** D008180 * **HPO Code:** HP:0002725
* **SNOMED ID:** 55464009

13. Study Procedures & Methodology

Management Pathway: Standard routine clinical pathway for SLE management in Poland **Education Protocol (HCP):** NDP guideline adherence training **Education Protocol (Patient):** Standard clinical care counseling **Quality Audit Mechanism:** Longitudinal EHR data extraction and clinical outcome tracking

14. Observation & Follow-Up Schedule

Total Duration: ~30 months (~6 months retrospective baseline, ~24 months prospective follow-up) **Onsite Visit Cadence:** Routine clinical care intervals (Data collection at Index, Months 6, 12, 18, 24) **Remote Monitoring Frequency:** Based on real-world data extraction intervals **Checklist Review Interval:** Data entry QA at 6-month intervals
