

1. Administrative & Study Identification

Public Study Title: A Study of How Safe Abrocitinib (CIBINQO) is in Pregnant Women and Their Offspring **Official Study Title:** CIBINQO™ Pregnancy Registry: An Observational Study of the Safety of Abrocitinib Exposure in Pregnant Women and Their Offspring **Short Title/Acronym:** CIBINQO Pregnancy Registry **Protocol Number:** B7451095 **NCT Number:** NCT05721937 **Posting ID:** 167610708350346724 **Sponsor/Company Name:** Pfizer **Investigational Product:** Abrocitinib (Trade Name: CIBINQO) **ATC Code:** D11AH08 **Phase of Development:** Not Applicable **Trial Status:** RECRUITING (Currently recruiting participants) **Medical Monitor:** Pfizer CT.gov Call Center / Medical Monitor

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To evaluate the safety of abrocitinib (CIBINQO) in pregnant women and their offspring. **Secondary Objectives:** To compare the experiences and outcomes of pregnant women exposed to abrocitinib during pregnancy against an unexposed group of pregnant women with moderate-to-severe atopic dermatitis.

2.2 Background & Rationale To address the knowledge gap regarding the safety of abrocitinib (a Janus kinase 1 inhibitor) exposure during pregnancy. Since pregnant individuals are typically excluded from pre-approval clinical trials, this observational registry is necessary to determine if abrocitinib is safe during pregnancy and to monitor any potential impacts on fetal development, birth outcomes, and early infant milestones.

3. Study Design & Methodology

3.1 Design Framework Study Type: Observational (Pregnancy Registry) **Control Type:** Unexposed cohort (Pregnant women with moderate-to-severe AD not exposed to abrocitinib) **Blinding:** Open-label (None) **Randomization:** N/A

3.2 Planned Enrollment & Duration Targeted Enrollment: 400 participants **Number of Sites:** Multicenter (Managed via a virtual research coordinating center) **Estimated Study Start:** 25-Jul-2023 **Estimated Primary Completion:** 31-Dec-2027

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Women of any age who are currently or recently pregnant (recently pregnant defined as enrollment within 1 year of pregnancy outcome). 2. Consent to participate in this study and evidence of a personally signed and dated informed consent document indicating that the patient (or a legally acceptable representative) has been informed of all pertinent aspects of the study. 3. Authorization for her healthcare provider(s) to provide data to the registry. 4. Must receive at least one dose of CIBINQO at any time during pregnancy or prior to pregnancy (within 1 day prior to the date of conception) OR have a diagnosis of moderate-to-severe atopic dermatitis at any time prior to pregnancy outcome.

4.2 Exclusion Criteria 1. Participants will be excluded from the registry if they do not meet the inclusion criteria listed above. 2. Unwilling or unable to provide informed consent. 3. Unwilling to authorize the release of medical records for the duration of the registry.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: Routine clinical care (as prescribed by the healthcare provider; no assigned study intervention). **Route of Administration:** Oral (for abrocitinib). **Duration of Treatment:** Real-world exposure during pregnancy, with follow-up extending until the infant is 12 months of age.

5.2 Concomitant & Prohibited Therapy Permitted: All standard-of-care treatments for moderate-to-severe atopic dermatitis and routine prenatal care. **Prohibited:** None specified (Observational, routine care study design).

6. Study Timeline & Visit Schedule

Note: No additional visits beyond routine care are required. Data is collected via a virtual research coordinating center.

Visit ID	Window	Key Activities/Procedures	:---	:---
:---	Screening/Enrollment	Any time during pregnancy or up to 1 yr post-outcome	Informed Consent, Medical History, Baseline Data Collection	Interim 1 End of 2nd Trimester Maternal safety, AD status, and pregnancy progress tracking Pregnancy Outcome Delivery / Fetal Loss Tracking of live birth, involuntary fetal loss (<20 or ≥20 weeks), and birthweight End of Study Infant Age: 4 & 12 Months Infant safety, developmental milestones (CDC criteria)

7. Outcome Measures (Endpoints)

7.1 Primary Outcomes 1. **Percent of live birth children with major congenital malformations:** An abnormality of body structure or function that is present at birth, is of prenatal origin (i.e., birth defect), has significant medical, social, or cosmetic consequences for the affected individual, and typically requires medical intervention. (*Measurement Method: Clinical medical records collection from healthcare providers.*)

7.2 Secondary Outcomes 1. Percent of participants with children with minor congenital malformations. 2. Percent of participants with spontaneous abortion. 3. Percent of participants with stillbirths.

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Data collected remotely via the virtual coordinating center through patient interactions and healthcare provider records at specific pregnancy and infant milestones. **Serious Adverse Events (SAEs):** Routine pharmacovigilance tracking per registry standards for fetal and maternal health. **Data Monitoring Committee (DMC):** Internal sponsor (Pfizer) registry oversight.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Exposed Group (pregnant women exposed to abrocitinib) and Unexposed Group (pregnant women with moderate-to-severe AD, not exposed). **Sample Size Justification:** Registry is exploratory and descriptive; enrollment size is targeted at 400 participants based on real-world identification of eligible participants. **Handling of Missing Data:** Standard observational imputation and analysis strategies per the registry's Statistical Analysis Plan (SAP).

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Pharmacoepidemiology Practices (GPP) and the Declaration of Helsinki where applicable. **Monitoring Plan:** Remote data monitoring and collection through a centralized virtual coordinating center. **Audit Trail:** Verification of exposure and outcomes via direct authorization from the participants' healthcare providers.

11. Study Identifiers & Governance

Primary ID: B7451095 **Posting ID:** 167610708350346724 **Registry Number:** NCT05721937 **Sponsor/Company:** Pfizer **Public Study Title:** A Study of How Safe Abrocitinib (CIBINQO) is in Pregnant Women and Their Offspring **Official Regulatory Title:** CIBINQO™ Pregnancy Registry: An Observational Study of the Safety of Abrocitinib Exposure in Pregnant Women and Their Offspring **Trial Status:** RECRUITING

12. Clinical Framework (Atopic Dermatitis / Pregnancy Specific)

Disease Area / Primary Condition: Atopic Dermatitis in Pregnant Women **Diagnosis Threshold:** Diagnosis of moderate-to-severe atopic dermatitis **Medical Methodology:** Routine clinical care and standard AD management **Optimization Target:** Tracking maternal safety, pregnancy outcomes, and infant development

13. Study Procedures & Methodology

Management Pathway: Standard routine care for pregnancy and AD management **Education Protocol (HCP):** HCP instructions for registry reporting and data sharing **Education Protocol (Patient):** Virtual registry enrollment and milestone reporting **Quality Audit Mechanism:** Cross-referencing patient-reported milestones with authorized healthcare provider medical records

14. Observation & Follow-Up Schedule

Total Duration: Length of pregnancy plus up to 12 months post-partum **Onsite Visit Cadence:** No additional onsite research visits; routine care only **Remote Monitoring Frequency:** Enrollment, End of 2nd Trimester, Pregnancy Outcome **Checklist Review Interval:** Infant follow-up at 4 months and 12 months of age

15. Sign-off & Approval
