

1. Administrative & Study Identification

Full Study Title: A Phase IIIb Study of Durvalumab as Consolidation Treatment for Patients Diagnosed With Limited Stage Small Cell Lung Cancer Who Have Not Progressed Following Definitive Concurrent or Sequential Platinum-based Chemoradiation Therapy in Spain (ALBORAN) **Short Title/Acronym:** ALBORAN Study **Protocol Number:** AstraZeneca Internal Study ID (ALBORAN) **NCT Number:** NCT06992609 **Posting ID:** 279854364345578506 **Trial Status:** Recruiting (Currently recruiting participants) **Sponsor Name:** AstraZeneca **Investigational Product:** Durvalumab **Phase of Development:** Phase IIIb **Medical Monitor:** AstraZeneca Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To describe the safety profile of durvalumab for patients with Limited-Stage Small Cell Lung Cancer (LS-SCLC) who have not progressed following concurrent or sequential platinum-based chemoradiation therapy (CRT). **Secondary Objectives:** To describe the effectiveness of durvalumab for patients with LS-SCLC who have not progressed following CRT, and to further describe the safety profile, patient characteristics, treatment exposure, administration, and quality of life (QoL).

2.2 Background & Rationale Lung cancer is the leading cause of cancer death worldwide, with small cell lung cancer (SCLC) accounting for ~14-15% of cases. SCLC is a highly aggressive and lethal malignancy with a 5-year survival rate of <7%, characterized by early metastatic spread. Based on the pivotal ADRIATIC trial, durvalumab demonstrated a statistically significant and clinically meaningful improvement in overall survival (OS) and progression-free survival (PFS) as a consolidation therapy. This ALBORAN phase IIIb study aims to assess the real-world safety and effectiveness of durvalumab in an LS-SCLC population in Spain, providing crucial insights into routine clinical practice, patient outcomes, and QoL.

3. Study Design & Methodology

3.1 Design Framework Study Type: Interventional **Control Type:** Single-arm **Blinding:** Open-label **Randomization:** N/A

3.2 Planned Enrollment & Duration Target \$\$\$: 70 patients **Number of Sites:** Multiple sites in Spain (e.g., Hospital Universitario

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Female or male patients aged ≥ 18 years at the time of signing the Informed Consent Form (ICF). 2. Diagnosed with Limited Stage Small Cell Lung Cancer (LS-SCLC) and have not progressed following definitive concurrent or sequential platinum-based chemoradiation therapy. 3. Written informed consent to collect baseline tissue and blood samples for future translational biomarker assessment.

4.2 Exclusion Criteria 1. Patients with Extensive-Stage SCLC (ES-SCLC). 2. Objective disease progression observed after platinum-based CRT. 3. Active or prior documented autoimmune or inflammatory disorders, or active infections (e.g., tuberculosis, HIV, Hepatitis B/C).

5. Intervention & Treatment Plan

5.1 Investigational Regimen Investigational Product: Durvalumab **Trade Name:** Imfinzi **ATC Code:** L01FF03 **Dosage/Frequency:** Durvalumab maintenance therapy administered once every 4 weeks. **Route of Administration:** Intravenous (IV). **Duration of Treatment:** Consolidation treatment for up to 24 months, or until confirmed disease progression or unacceptable toxicity. **Regulatory Link:** [EMA Product Information](#)

5.2 Concomitant & Prohibited Therapy Permitted: Standard supportive and palliative care for symptoms associated with lung cancer. **Prohibited:** Concurrent immunosuppressive therapies (e.g., systemic corticosteroids > 10 mg/day prednisone equivalent) that could counteract durvalumab's immune-mediated mechanism of action.

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures
Screening	Day -28 to 0	Informed Consent, Medical History, Baseline Tissue & Blood sampling
Baseline	Day 0	Randomization/Enrollment, First Dose of Durvalumab
Interim	Cycles 1, 2, 3, 4, 7, 10, 13...	Durvalumab administration, Safety/AE monitoring, QoL, Biomarker assessment
End of Study	Up to 24 months	Final Assessments, 90-day post-treatment safety follow-up

7. Outcome Measures (Endpoints)

7.1 Primary Endpoints (Safety) * Incidence of grade ≥ 3 adverse events (AEs). * Incidence of immune-mediated AEs (imAEs) defined as an AE associated with drug exposure consistent with an immune-mediated mechanism of action without a clear alternate etiology. * Incidence of AEs leading to treatment delays, interruptions, or permanent discontinuation.

7.2 Secondary & Exploratory Endpoints (Effectiveness & Additional Safety) * Progression-Free Survival (PFS), defined as the time from the date of the first dose of durvalumab until the date of objective disease progression or death (by any cause in the absence of progression). * Further description of the safety profile of durvalumab. * Quality of Life (QoL) and overall treatment exposure profiles.

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Routine collection during clinical visits, focusing closely on immune-mediated adverse events (imAEs). **Serious Adverse Events (SAEs):** Evaluated continuously throughout treatment and up to 90 days after the last dose of durvalumab. **Data Monitoring Committee (DMC):** Safety monitoring and oversight managed by AstraZeneca.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Safety Set for all primary AE/SAE/imAE evaluations. Intent-to-Treat (ITT) for secondary effectiveness outcomes (e.g., PFS evaluation). **Sample Size Justification:** Target sample of $N=70$ patients intended to describe real-world effectiveness, safety, and exposure profiles within the Spanish population. **Handling of Missing Data:** Standard censoring methods for time-to-event endpoints using Kaplan-Meier methodology for PFS analysis.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Clinical Practice (GCP) and the Declaration of Helsinki. **Monitoring Plan:** Scheduled onsite and remote monitoring visits to ensure data validity and protocol adherence across participating Spanish centers. **Audit Trail:** Electronic Case Report Form (eCRF) tracking, query resolution, and data clarification mechanisms.

11. Study Identifiers & Governance

Primary ID: ALBORAN **Registry Number:** NCT06992609 **Posting ID:** 279854364345578506 **Sponsor/Lead Organization:** AstraZeneca **Study Title:** Durvalumab After Chemoradiotherapy in Limited Stage Small Cell Lung Cancer (ALBORAN) **Official Regulatory Title:** A Phase IIIb Study of Durvalumab as Consolidation Treatment for Patients Diagnosed With Limited Stage Small Cell Lung Cancer Who Have Not Progressed Following Definitive Concurrent or Sequential Platinum-based Chemoradiation Therapy in Spain (ALBORAN)

12. Clinical Framework (SCLC Specific)

Primary Condition: Small Cell Lung Cancer (LS-SCLC) Preferred
Name: Small cell carcinoma of lung (Small Cell Lung Carcinoma)
MeSH Code: D055752 **HPO Code:** HP:0030357 **SNOMED ID:** 254632001
Diagnosis Threshold: Histologically or cytologically documented LS-SCLC without progression post-CRT. **Medical Methodology:** Immunotherapy (PD-L1 blockade) consolidation therapy.
Optimization Target: Acceptable safety profile and Progression-Free Survival (PFS) extension.

13. Study Procedures & Methodology

Management Pathway: Durvalumab maintenance post-CRT. **Education Protocol (HCP):** Protocol guidelines covering AE grading and early immune-mediated AE management. **Education Protocol (Patient):** Treatment expectations, schedule adherence, and immediate reporting of potential imAE symptoms. **Quality Audit Mechanism:** Source data verification and continuous safety reviews.

14. Observation & Follow-Up Schedule

Total Duration: Up to 24 months of active treatment, followed by a 90-day safety follow-up. **Onsite Visit Cadence:** Corresponds directly with treatment infusion cycles (e.g., Cycles 1, 2, 3, 4, 7, 10, 13). **Remote Monitoring Frequency:** Standard inter-cycle AE monitoring per site guidelines. **Checklist Review Interval:** Routine continuous assessment at every infusion visit.
