

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 02-Apr-2026

1. Administrative & Study Identification

Full Study Title: Transgene Assay Testing Service of Tumor Samples From Patients Who Received a Bristol-Myers Squibb Manufactured Gene Modified Cell Therapy and Have a Qualifying Second Primary Malignancy

Short Title/Acronym: Transgene Service Assay (CA082-085)

Protocol Number: CA082-085

NCT Number: NCT06357754

Posting ID: 347256208781171904 **Sponsor/Company Name:** Bristol Myers Squibb

Investigational Product: Idecabtagene vicleucel (Trade name: Abecma; ATC Code: L01XL07) and Lisocabtagene maraleucel (Breyanzi) / Gene Modified Cell Therapy (GMCT)

Phase of Development: Not Applicable

Trial Status: RECRUITING **Medical Monitor:** Bristol Myers Squibb Pharmacovigilance / Medical Monitor

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To evaluate tumor samples for transgene levels in patients who received a commercially available Bristol-Myers Squibb manufactured gene modified cellular therapy and have reported a qualifying second malignancy. **Secondary Objectives:** Not applicable.

2.2 Background & Rationale Patients treated with Bristol Myers Squibb (BMS) manufactured GMCTs (such as Abecma or Breyanzi) may develop secondary malignancies. BMS is providing this worldwide non-interventional laboratory testing protocol to fulfill post-marketing requirements and pharmacovigilance (PVP) / Risk Management Plan (RMP) commitments to Health Authorities. The study aims to investigate secondary malignancies suspected of T-cell origin or other types by evaluating tumor samples for transgene levels and potential insertional oncogenesis.

3. Study Design & Methodology

3.1 Design Framework Study Type: OBSERVATIONAL (Worldwide non-interventional laboratory testing protocol) **Control Type:** Single-arm (No control group) **Blinding:** Open-label **Randomization:** N/A

3.2 Planned Enrollment & Duration Target N\$: 50 Number of Sites: 8 Global Locations (including sites in the US, Germany, and Japan) **Estimated Study Start:** 06-Oct-2023 **Estimated Primary Completion:** 06-Oct-2038

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Participant has received a commercially available Bristol-Myers Squibb (BMS) manufactured Gene Modified Cell Therapy (GMCT) and has been diagnosed with a qualifying second primary malignancy or a second primary malignancy which BMS has qualified for testing. 2. Participant has received a commercially available BMS manufactured GMCT in a clinical trial or other investigational setting (including non-conforming product) for which there is no testing protocol in place for that trial or investigational setting and has been diagnosed with a qualifying second primary malignancy or a second primary malignancy which BMS has qualified for testing.

4.2 Exclusion Criteria 1. Participant is actively participating in a clinical trial where information and sample collection is being conducted under that clinical trial. 2. Participant has not received a BMS manufactured GMCT or has not been diagnosed with a qualifying second primary malignancy.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: N/A (Observational testing service; no active treatment administered). Acceptable sample types for testing include Formalin fixed paraffin embedded (FFPE) tumor sample (twenty 4-5 µm freshly cut sections), Bone marrow aspirate (up to 6mL, minimum 4mL), FFPE bone marrow biopsy, and Peripheral blood (6ml). **Route of Administration:** In vitro laboratory testing. **Duration of Treatment:** N/A (Observation period for secondary malignancies is up to 15 years).

5.2 Concomitant & Prohibited Therapy Permitted: Standard of care therapies for the secondary malignancy as prescribed by the treating physician. **Prohibited:** N/A

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures
1	Screening	Upon diagnosis of secondary malignancy Informed Consent, Collection of Samples (Tumor tissue, bone marrow, or blood)
2	Observation	Up to 15 years post-GMCT Pharmacovigilance tracking, AE / Secondary Malignancy reporting
3	End of Study	Year 2038 Final data collection and insertion site analysis outcomes

7. Outcome Measures (Endpoints)

7.1 Primary Endpoints Definition: 1. Participant in situ hybridization (ISH) or droplet-based digital Polymerase chain reaction (ddPCR) transgene testing results. 2. Participant insertion site analysis (ISA) testing results: For participants with positive in situ hybridization (ISH) transgene or droplet-based digital polymerase chain reaction (ddPCR) transgene results. **Measurement Method:** In Situ Hybridization (ISH) or droplet-based digital Polymerase chain reaction (ddPCR) to detect applicable transgene levels in tumor tissue. If detected at qualifying levels, Insertion Site Analysis (ISA) is performed to identify the transgene location and frequency of insertions.

7.2 Secondary & Exploratory Endpoints Not applicable per protocol CA082-085.

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Routine post-market tracking of secondary malignancy occurrences via structured secondary malignancy Case Report Forms (CRFs). **Serious Adverse Events (SAEs):** Secondary malignancies are reported to BMS Pharmacovigilance and submitted to applicable Health Authorities as part of the overarching Risk Management Plan (RMP). **Data Monitoring Committee (DMC):** Internal BMS Safety and Pharmacovigilance Teams.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: All participants submitting qualifying samples for testing. **Sample Size Justification:** Descriptive, real-world observational study driven by the incidence of secondary malignancies (Targeted enrollment: 50). **Handling of Missing Data:** Descriptive statistics without imputation.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: Conducted in accordance with Good Pharmacoepidemiology Practices (GPP) and Health Authority post-market safety requirements. **Monitoring Plan:** Safety monitoring dictated by the product-specific Pharmacovigilance Plan (PVP) and Risk Management Plan (RMP). **Audit Trail:** Central laboratory tracking of sample integrity, structured secondary malignancy CRFs, and database locking.

11. Study Identifiers & Governance

Primary ID: CA082-085 **Registry Number:** NCT06357754 **Sponsor/Lead Organization:** Bristol Myers Squibb **Study Title:** Transgene Assay Testing Service of Tumor Samples From Patients Who Received a Bristol-Myers Squibb Manufactured Gene Modified Cell Therapy and Have a Qualifying Second Primary Malignancy **Official Regulatory Title:** Protocol for Transgene Assay Service

12. Clinical Framework (Gene-Modified Cell Therapy Specific)

Disease Areas & Conditions: Non-Hodgkin Lymphoma, Chronic Lymphocytic Leukaemia, Multiple Myeloma, Hodgkin Disease, Second Primary Malignancy **Preferred UMLS Name:** Neoplasms, Experimental **MeSH Code:** D006689 **Diagnosis Threshold:** Histologically confirmed qualifying secondary malignancy post-GMCT infusion. **Medical Methodology:** Observational Laboratory Testing (Transgene Assay Service) **Optimization Target:** Detection of insertional oncogenesis or transgene presence

13. Study Procedures & Methodology

Management Pathway: Tissue biopsy and blood sampling executed following the diagnosis of a secondary malignancy. **Education Protocol (HCP):** Instructions provided to Health Care Providers on sample collection and Health Authority reporting requirements for GMCT-related secondary malignancies. **Education Protocol (Patient):** Informed consent detailing the testing of tumor tissue to assess potential links to the previously administered gene therapy. **Quality Audit Mechanism:** Centralized laboratory analysis (ISH/ddPCR/ISA) and Pharmacovigilance database oversight.

14. Observation & Follow-Up Schedule

Total Duration: Up to 15 years post-infusion (Estimated study completion Oct-2038) **Onsite Visit Cadence:** Dictated by the standard of care for the diagnosed secondary malignancy. **Remote Monitoring Frequency:** Continuous Pharmacovigilance tracking. **Checklist Review Interval:** Event-driven reporting as secondary malignancies occur.

15. Sign-off & Approval
