

Clinical Study Summary Report (CSSR)

Document Status: Draft | Version: 0.1 | Date: 07-Apr-2026

1. Administrative & Study Identification

Full Study Title: Master Screening Study to Determine Individuals With Potential Trial Eligibility for Alzheimer's Disease Studies as Assessed by Biomarker Status and Cognition **Short Title/ Acronym:** TRAVELLER Study **Protocol Number:** WP45722 **NCT Number:** NCT07177352 **Sponsor Name:** Hoffmann-La Roche **Investigational Product:** No Intervention (Diagnostic/Screening: pTau217 blood biomarker & memory cognitive test) **Phase of Development:** Phase 3 **Medical Monitor:** [Name and Contact Information]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective: To identify individuals who may be eligible for future clinical trials testing new drugs for Alzheimer's disease (AD) through the assessment of the pTau217 blood biomarker status and cognitive memory testing.

Secondary Objectives: To evaluate the feasibility, scalability, and predictive utility of the pTau217 blood biomarker in screening potential candidates for large-scale AD clinical trials.

2.2 Background & Rationale

To address the need for a streamlined and efficient pre-screening process for interventional Alzheimer's disease studies. Accurately identifying appropriate candidates for AD trials is historically challenging and resource-intensive. By utilizing a blood biomarker (pTau217) developed to identify people likely to have AD alongside cognitive memory assessments, this study aims to efficiently map participants to future interventional therapeutic trials.

3. Study Design & Methodology

3.1 Design Framework

Study Type: Interventional (Pre-screening / Diagnostic) **Control Type:** Single-arm (No Intervention) **Blinding:** Open-label **Randomization:** N/A

3.2 Planned Enrollment & Duration

Target \$N\$: 13,000 estimated patients **Number of Sites:** 207 locations globally (including sites in USA, Canada, Australia, Argentina, and Poland) **Estimated Study Start:** 02-Jul-2025 **Estimated Primary Completion:** 31-Jul-2035 (Estimated End Date)

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

1. Age 50 to 90 years old.
2. Report of objective or subjective memory concerns (by the participant and/or their informant) within the last year with or without a previous clinical diagnosis of Mild Cognitive Impairment (MCI) or dementia due to AD.

4.2 Exclusion Criteria

1. Dependency in basic activities of daily living (bADLs) due to cognitive impairment.
2. Visual or auditory impairment that would prevent them from performing the cognitive assessments (eyeglasses and hearing aids are permitted).
3. Any self-reported evidence or known diagnosis of a neurological or neurodegenerative condition that may lead to cognitive impairment other than AD (e.g., frontotemporal dementia, vascular dementia, Parkinson's disease, seizure disorder).
4. History of severe, clinically significant central nervous system trauma or any serious medical condition that precludes a participant's safe participation and completion of a clinical study.

5. Intervention & Treatment Plan

5.1 Investigational Regimen

Dosage/Frequency: No medication or therapeutic intervention will be administered. Participants will undergo a single memory test and provide one blood sample.

Route of Administration: Venipuncture (blood sample) and Oral/Interactive (cognitive assessment).

Duration of Treatment: Single assessment period (Pre-screening).

5.2 Concomitant & Prohibited Therapy

Permitted: Standard medications allowed for co-morbidities.

Prohibited: N/A (Observational/pre-screening nature of the trial imposes no therapeutic restrictions).

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures	:---
:---	:---	Screening	Day 0 Informed Consent, Medical History, Cognitive/Memory Test, Blood Sample for pTau217 biomarker
End of Study	Variable	Notification of Eligibility for future Roche interventional AD studies	

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint

Definition: Identification of clinical trial eligibility based on

biomarker positivity and cognitive impairment thresholds.

Measurement Method: Central Laboratory Analysis of blood sample (pTau217 biomarker) and standardized cognitive memory scoring.

7.2 Secondary & Exploratory Endpoints

Proportion of screened individuals meeting the eligibility criteria for future AD interventional trials.

Correlation between subjective memory concerns and pTau217 biomarker positivity.

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Standard clinical monitoring during venipuncture and cognitive assessments.

Serious Adverse Events (SAEs): Standard reporting timelines, typically within 24 hours of site awareness.

Data Monitoring Committee (DMC): Internal safety and data monitoring committee managed by Hoffmann-La Roche.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Enrolled Set (all patients who consent and provide a blood sample) and Evaluable Population (patients with valid pTau217 and cognition scores).

Sample Size Justification: \$N = 13,000\$ participants estimated to yield an adequately sized pool of eligible candidates to power subsequent Phase 3 interventional AD studies.

Handling of Missing Data: Patients with missing core biomarker or cognition data will be excluded from the final eligibility pool.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Clinical Practice (GCP) and the Declaration of Helsinki.

Monitoring Plan: Periodic site monitoring to ensure strict adherence to informed consent protocols, proper cognitive testing administration, and blood sample handling procedures.

Audit Trail: eCRF locking and data clarification forms via secure central laboratory and clinical databases.

11. Study Identifiers & Governance

Primary ID: WP45722 **Registry Number:** NCT07177352 **Sponsor/Lead**

Organization: Hoffmann-La Roche **Study Title:** TRAVELLER **Official**

Regulatory Title: Master Screening Study to Determine Individuals With Potential Trial Eligibility for Alzheimer's Disease Studies as Assessed by Biomarker Status and Cognition

12. Clinical Framework (Alzheimer's Disease / Screening Specific)

Primary Condition: Alzheimer's Disease (AD), Memory Loss, Dementia, Mild Cognitive Impairment **Diagnosis Threshold:** Positive pTau217 blood biomarker combined with objective memory test results **Medical Methodology:** Biomarker and Cognitive Screening **Optimization Target:** Identification of future clinical trial eligibility

13. Study Procedures & Methodology

Management Pathway: Pre-screening pathway for AD clinical trials **Education Protocol (HCP):** Site training on cognitive assessment administration and venipuncture sample processing **Education Protocol (Patient):** Information provisioning regarding potential future trial eligibility **Quality Audit Mechanism:** Centralized laboratory tracking for pTau217 processing and site-level cognitive testing accuracy

14. Observation & Follow-Up Schedule

Total Duration: Single screening interaction **Onsite Visit Cadence:** Baseline screening visit **Remote Monitoring Frequency:** N/A (Point-in-time screening) **Checklist Review Interval:** N/A

15. Sign-off & Approval
