

1. Administrative & Study Identification

Full Study Title: A Multicenter, Non-interventional Prospective Active Surveillance Study Among Participants Receiving Somatrogen Under Routine Clinical Care in India **Short Title/Acronym:** Somatrogen in pGHD India Study **Posting ID:** 4620456242241079 **Protocol Number:** C0311026 **NCT Number:** NCT06587035 **Sponsor/Company Name:** Pfizer **Investigational Product:** somatrogen **Phase of Development:** Not Applicable (Phase ID: Not Applicable) **Trial Status:** RECRUITING (Currently recruiting participants) **Medical Monitor:** Pfizer Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To evaluate and learn about the safety of Somatrogen for the treatment of pediatric growth hormone deficiency (p GHD) in India by observing the occurrence of side effects over a 3-year period. **Secondary Objectives:** To monitor real-world utilization, tolerability, and longitudinal clinical outcomes of Somatrogen in a routine clinical care setting.

2.2 Background & Rationale Pediatric GHD is a condition caused by too little amounts of growth hormone in the body, leading to short stature. Children with GHD can have the condition present at birth or develop it later. The condition occurs if the pituitary gland makes too little growth hormone. Somatrogen is an injectable growth hormone treatment. This observational study is being conducted to prospectively gather real-world safety data on the side effects associated with Somatrogen when prescribed and administered under routine clinical practice in the Indian pediatric population.

3. Study Design & Methodology

3.1 Design Framework Study Type: Observational (Non-interventional Prospective Active Surveillance) **Control Type:** Single-arm **Blinding:** Open-label **Randomization:** N/A

3.2 Planned Enrollment & Duration Targeted Enrollment: 50 estimated participants **Number of Sites:** 4 sites across India (Bengaluru, Chennai, Coimbatore, Madurai) **Estimated Study Start:** 30-Jan-2025 **Estimated Primary Completion:** 21-Sep-2026

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Prescription of Somatrogen for p GHD in participants aged 3 years or more. 2. Evidence of a personally signed and dated informed consent document indicating that the participant (or a legally acceptable representative) has been informed and agrees to all pertinent aspects of the study. 3. Assent will also be sought from children of applicable age in line with national guidance. In all cases, the treating physician responsible for enrolling the participant into the study will assess the appropriateness of gaining assent from a participant (or a legally acceptable representative) at their discretion during routine clinical care.

4.2 Exclusion Criteria 1. Participation in any interventional clinical trials at the time of enrollment.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Drug Name / Preferred Name: somatrogen **Trade Name:** Ngenla **ATC Code:** H01AC08 **EMA URL:** [Ngenla EPAR Product Information](#) **Dosage/Frequency:** Somatrogen administered per the treating physician's prescription in routine clinical care (typically once weekly). **Route of Administration:** Subcutaneous Injection. **Duration of Treatment:** Monitored over a follow-up period of up to 3 years.

5.2 Concomitant & Prohibited Therapy Permitted: Standard concomitant therapies and routine medical care for managing p GHD and general health. **Prohibited:** Concurrent participation in other interventional investigational drug trials.

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures
1	Screening/Baseline	Day 0 Informed Consent/ Assent, Medical History, Confirmation of Somatrogen prescription
2	Follow-Up Visits	Up to 3 Years Safety tracking, side effect collection via clinic re-visits or over a call (no mandatory study-specific clinic visits required)
3	End of Study	Year 3 Final safety evaluation, data collection, and CRF completion

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: Number of adverse events in participants on Somatrogen. **Measurement Method:** Clinical observation and patient/caregiver reporting; side effect information collected by the study doctor and recorded onto

patient case report forms (CRFs) during clinic re-visits or follow-up calls within 3 years after taking Somatrogen.

7.2 Secondary & Exploratory Endpoints 1. Number of participants reporting missed injections with Somatrogen in order to evaluate treatment adherence. 2. Overall clinical well-being and symptom management under standard of care.

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Evaluated through expected and unexpected side effects. Data is collected by the treating physician during routine check-ups or phone calls and logged into the study CRF. **Serious Adverse Events (SAEs):** Reported according to standard pharmacovigilance timelines for post-marketing observational studies. **Data Monitoring Committee (DMC):** Managed through Pfizer's internal pharmacovigilance and safety monitoring teams.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Safety Set (all participants who provided consent, were prescribed Somatrogen, and contributed safety follow-up data). **Sample Size Justification:** Target enrollment of 50 participants based on the estimated population of pediatric patients prescribed Somatrogen across the 4 participating clinical sites in India. **Handling of Missing Data:** Due to the non-interventional nature of the trial, safety outcomes will be summarized descriptively using available observed data without imputation.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Pharmacoepidemiology Practices (GPP), local regulatory guidelines, and the Declaration of Helsinki. **Monitoring Plan:** Participants are followed as per routine clinical practice; relevant data is systematically entered into CRFs to ensure fidelity to source records. **Audit Trail:** Standard electronic data capture protocols with audit trails for safety reporting and data clarification. **Phase Requirement Criteria:** Criteria Type: PHASE_REQUIREMENT | Criteria Text: Trial must be in Not Applicable

11. Study Identifiers & Governance

Primary ID: C0311026 **Registry Number:** NCT06587035 **Sponsor/Lead Organization:** Pfizer **Study Title:** A Study to Learn About

Somatrogon in Patients With Pediatric Growth Hormone Deficiency (p GHD) in India. **Official Regulatory Title:** A Multicenter, Non-interventional Prospective Active Surveillance Study Among Participants Receiving Somatrogon Under Routine Clinical Care in India **Status Name:** RECRUITING **Source Level:** 5

12. Clinical Framework & Disease Ontology (pGHD Specific)

Primary Condition / Preferred UMLS Name: Pediatric Growth Hormone Deficiency (p GHD) **Disease Areas:** Dwarfism, Pituitary **Condition Name / Preferred Name:** Dwarfism **Semantic Type:** Disease or Syndrome **Definition:** Short stature that usually results from genetic mutations. Other causes include hormonal deficiencies and poor nutrition. **MeSH Code:** D004392 **HPO Codes:** HP:0003510 **SNOMED ID:** 237836003 **SNOMED Hierarchy:** 237834000|Disorder of stature|Disorder of stature (disorder), 5294002|Developmental disorder|Developmental disorder (disorder), 64572001|Disease|Disease (disorder)

13. Study Procedures & Methodology

Management Pathway: Standard routine clinical pathway for p GHD management **Education Protocol (HCP):** Pharmacovigilance training and instructions for entering participant data onto case report forms (CRFs) **Education Protocol (Patient):** HCP guidance on Somatrogon injection use, side effect awareness, and follow-up expectations **Quality Audit Mechanism:** Periodic review of CRFs submitted by the treating physicians

14. Observation & Follow-Up Schedule

Total Duration: 3 years of safety follow-up **Onsite Visit Cadence:** Dictated entirely by routine clinical care standards; no protocol-mandated clinic visits **Remote Monitoring Frequency:** Over-the-phone follow-ups are permitted as alternatives to physical clinic re-visits to capture side effect data **Checklist Review Interval:** Ongoing real-time assessment during the 3-year surveillance window
