

Clinical Study Summary Report (CSSR)

Document Status: Draft | Version: 1.0 | Date: 02-Apr-2026

1. Administrative & Study Identification

Full Study Title / Official Title: Observational Retrospective Study to Characterize and Assess Clinical Outcomes of Patients Receiving Tezepelumab After Marketing Approval in Spain **Short Title/Acronym:** T-ROSS-II **Protocol Number:** D5180R00038 **NCT Number:** NCT07013760 **Sponsor Name:** AstraZeneca **Investigational Product:** Tezepelumab **Phase of Development:** Phase IV / Observational **Medical Monitor:** AstraZeneca Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To characterize and assess the clinical outcomes of patients 12 years and older receiving tezepelumab for severe asthma in routine clinical practice in Spain after its marketing launch. **Secondary Objectives:** To evaluate asthma control, improvements in quality of life, sino-nasal symptoms in patients with comorbid nasal polyposis, and the presence of other comorbidities (e.g., COPD, allergic rhinitis, atopic dermatitis).

2.2 Background & Rationale Following the marketing approval of tezepelumab in Spain, there is a need to generate additional real-world evidence (RWE) on its use, effectiveness, and safety in a broader, non-clinical trial population. This study (T-ROSS-II) aims to bridge the gap between controlled phase III data and routine clinical practice in patients with severe, uncontrolled asthma.

3. Study Design & Methodology

3.1 Design Framework Study Type: Observational, multi-centre, retrospective **Control Type:** Single-arm **Blinding:** Open-label **Randomization:** N/A **Sampling Method:** Non-Probability Sample

3.2 Enrollment & Duration Target \$N\$ / Enrollment: 400 patients **Number of Sites:** Multi-centre across Spain **Actual Study Start Date:** 23-Jun-2025 **Actual Primary Completion Date:** 19-Dec-2025 **Actual Study Completion Date:** 19-Dec-2025

4. Subject Selection (Eligibility Criteria)

Study Population: All patients \$\\ge\$ 12\$ years old who have received tezepelumab according to the usual clinical practice

under the discretion of the physician according with the European SmPC and the reimbursement conditions in Spain. **Ages Eligible for Study:** 12 Years to 105 Years (Child, Adult, Older Adult) **Sexes Eligible for Study:** All Genders **Accepts Healthy Volunteers:** No

4.1 Inclusion Criteria 1. Patients aged ≥ 12 years at the index date. 2. Diagnosed with severe asthma who are inadequately controlled with high-dose inhaled corticosteroids (ICS) and a long-acting β_2 -agonist (LABA) $\pm$ additional medications for asthma control. 3. Patients who received at least 1 tezepelumab dose after commercialization in Spain (Index date). 4. Continuous enrolment in the data source for at least 12 months before the index date and at least 3 months after the index date.

4.2 Exclusion Criteria 1. Patients who received tezepelumab or any biologic drug for the treatment of asthma in a clinical trial at any time during the 12-months prior to the index date. 2. Patients who had initiated 3 or more non-tezepelumab biologic treatments (omalizumab, mepolizumab, reslizumab, benralizumab, and dupilumab) for severe asthma at any time prior to the index date. 3. Participation in any interventional clinical trial during the observation period. 4. Incomplete or missing critical baseline data in the electronic health records preventing accurate retrospective analysis.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: Tezepelumab administered per routine clinical practice and local label instructions. **Route of Administration:** Subcutaneous (SC) injection. **Duration of Treatment:** Retrospective observation with a minimum 3 months post-index continuous follow-up.

5.2 Concomitant & Prohibited Therapy Permitted: Standard of care maintenance therapies (high-dose ICS, LABA, OCS, and medications for comorbidities like COPD, GERD, and nasal polyposis). **Prohibited:** N/A (Observational real-world study).

6. Study Timeline & Visit Schedule

Visit ID	Window	Key Activities/Procedures	:---	:---
:---	Screening/Baseline	12 months prior to Index Date		
Retrospective extraction of baseline characteristics, comorbidities, and historical exacerbations. Index Date Day 0 First documented administration of tezepelumab. Follow-up ≥ 3 months post-Index Extraction of post-initiation clinical outcomes, quality of life scores, and asthma control assessments.				

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: Real-world clinical outcomes and effectiveness of tezepelumab, primarily focused on the reduction of asthma exacerbations and overall symptom control following treatment initiation. **Measurement Method:** Retrospective review of electronic health records and clinical databases.

7.2 Secondary & Exploratory Endpoints

- * **Asthma Control:** Evaluated using established scoring ranges (e.g., scores 0-1 indicating well-controlled asthma, 2-4 no well-controlled, and ≥ 5 indicating bad control).
- * **Quality of Life:** Assessed using the 32-item Asthma Quality of Life Questionnaire (AQLQ) or 15-item MiniAQLQ (scored 1-7).
- * **Sino-Nasal Symptoms:** Evaluated in applicable patients using the 22-item SNOT-22 questionnaire (scores ranging from 0-110, with higher scores indicating worse symptoms).

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Extracted retrospectively from patient medical charts and healthcare databases during the post-index period. **Serious Adverse Events (SAEs):** Captured as recorded by treating physicians in routine clinical practice. **Data Monitoring Committee (DMC):** N/A for this retrospective observational study.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: All eligible patients who received ≥ 1 dose of tezepelumab and met the minimum continuous enrollment criteria. **Sample Size Justification:** A cohort of 400 patients is statistically sufficient to evaluate real-world clinical outcomes and subgroup variations in the Spanish population. **Handling of Missing Data:** Dealt with using standard pharmacoepidemiologic methods; analyses are primarily conducted on available/observed cases.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Pharmacoepidemiology Practices (GPP) and local data privacy laws (e.g., GDPR in Spain). **Monitoring Plan:** Centralized data review and quality checks on the extracted retrospective datasets. **Audit Trail:** Maintained within the secure electronic data capture (EDC) system utilized for the abstraction of clinical source data.

11. Study Identifiers & Governance

Primary ID: D5180R00038 **Registry Number:** NCT07013760 **Sponsor/Lead Organization:** AstraZeneca **Study Title:** T-ROSS-II **Official Regulatory Title:** Observational Retrospective Study to Characterize and Assess Clinical Outcomes of Patients Receiving Tezepelumab After Marketing Approval in Spain

12. Clinical Framework (Severe Asthma Specific)

Primary Condition: Asthma (Severe Asthma) **Diagnosis Threshold:** Inadequately controlled on high-dose ICS and LABA **Medical Methodology:** Routine Clinical Practice / Real-World Evidence **Optimization Target:** Improvement of asthma control, reduction in exacerbations, and enhancement of quality of life

13. Study Procedures & Methodology

Management Pathway: Standard routine clinical care in Spain **Education Protocol (HCP):** N/A (Retrospective observational) **Education Protocol (Patient):** N/A (Retrospective observational) **Quality Audit Mechanism:** Data verification against source electronic health records (EHR)

14. Observation & Follow-Up Schedule

Total Duration: Minimum 12-month baseline period + ≥ 3 -month follow-up period **Onsite Visit Cadence:** N/A (Retrospective study) **Remote Monitoring Frequency:** N/A **Checklist Review Interval:** N/A

15. Sign-off & Approval
