

1. Administrative & Study Identification

Full Study Title: An open-label, multi-center rollover protocol for continued characterization of safety and tolerability for subjects who have participated in a Novartis-sponsored spartalizumab study as single agent or in combination with other study treatments **Short Title/Acronym:** Rollover Study for Continued Safety and Tolerability in Subjects Treated With Spartalizumab **Protocol Number:** CPDR001X2X01B **NCT Number:** NCT04058756 **Sponsor Name:** Novartis Pharmaceuticals Corporation **Investigational Product:** Spartalizumab (PDR001), single agent or in combination **Phase of Development:** Phase I **Medical Monitor:** Novartis Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To continue to assess safety and tolerability, and to allow continued access to study treatment for subjects already receiving spartalizumab as a single agent or in combination with other study treatments in a parent protocol. **Secondary Objectives:** To collect long-term efficacy and extent-of-exposure data for patients maintaining clinical benefit from spartalizumab-based therapies.

2.2 Background & Rationale Spartalizumab is a high-affinity, humanized anti-programmed death-1 (PD-1) IgG4 antibody that blocks the binding of PD-L1 and PD-L2 to PD-1, helping the immune system fight cancer. This rollover study is designed to ensure that participants with advanced solid tumors who are currently deriving clinical benefit from spartalizumab (either as a monotherapy or in combination regimens) in a Novartis-sponsored parent trial can continue their treatment while contributing valuable long-term safety data.

3. Study Design & Methodology

3.1 Design Framework Study Type: Interventional (Rollover Study) **Control Type:** Single-arm (No placebo group) **Blinding:** Open-label **Randomization:** N/A

3.2 Planned Enrollment & Duration Target \$N\$: Approximately 130 subjects **Number of Sites:** Multi-center (approx. 48 locations globally) **Estimated Study Start:** 29-Oct-2019 **Estimated Primary Completion:** 30-Apr-2030

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Signed informed consent must be obtained prior to participation. 2. Subject is currently enrolled in a pre-defined Novartis-sponsored study and is receiving spartalizumab as a single agent or in combination with other study treatment. 3. Subject is currently deriving clinical benefit from the study treatment, as determined by the investigator. 4. Subject has demonstrated compliance, as assessed by the investigator, with the parent protocol requirements.

4.2 Exclusion Criteria 1. Subject has been permanently discontinued from spartalizumab in the parent protocol for any reason other than enrollment in the Rollover Study. 2. Subject does not meet the criteria specified in the parent protocol for continued study treatment. 3. Subject is not willing to comply with the contraception requirements outlined in the exclusion criteria of the parent protocol.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: Spartalizumab administered at the same dose and schedule established in the parent protocol (e.g., 300 mg or 400 mg every 3 or 4 weeks), either as monotherapy or in combination with other approved study medications. **Route of Administration:** Intravenous (IV) infusion for Spartalizumab. **Duration of Treatment:** Until disease progression, unacceptable toxicity, withdrawal of consent, or study termination (estimated April 2030).

5.2 Concomitant & Prohibited Therapy Permitted: Standard supportive care and permitted concomitant medications as defined by the original parent protocol. **Prohibited:** Any investigational anticancer therapies other than the assigned combination treatments from the parent protocol.

6. Study Timeline & Visit Schedule

| Visit ID | Window (Days) | Key Activities/Procedures | | :---
| :--- | :--- | | **Screening/Baseline** | Day -14 to 0 | Informed Consent, Roll-over Eligibility Confirmation, Physical Exam, Baseline Labs | | **Interim** | Per Treatment Cycle (e.g., Q3W/Q4W) | Spartalizumab Infusion, Safety Labs, AE/SAE Assessment, Efficacy Checks | | **End of Study** | Follow-up Window | Final Vital Signs, Exit Evaluation, Safety Follow-up, IP Accountability |

(Note: Specific visit cadences are mapped directly to the individual patient's parent protocol schedule.)

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: Assessment of the safety and tolerability of spartalizumab by monitoring Adverse Events (AEs), serious adverse events (SAEs), physical examinations, and laboratory assessments from enrollment until study completion/discontinuation. **Measurement Method:** Clinical investigator assessments and Central/Local Laboratory Analysis.

7.2 Secondary & Exploratory Endpoints Long-term duration of exposure to study treatment. Long-term efficacy signals (e.g., maintenance of response) for patients with advanced solid tumors.

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Continuous monitoring via physical exams, laboratory evaluations, and patient reporting at each treatment cycle. **Serious Adverse Events (SAEs):** Standard reporting timeline (typically within 24 hours of investigator awareness). **Data Monitoring Committee (DMC):** Internal Novartis safety management and monitoring board evaluating the rollover aggregate data.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Safety Set (all patients who receive at least one dose of the rollover study drug). **Sample Size Justification:** Target sample size is descriptive (~130 subjects) and is driven by the number of eligible patients successfully rolling over from parent protocols, rather than being powered for formal hypothesis testing. **Handling of Missing Data:** Standard descriptive statistics; no formal imputation rules (e.g., LOCF or MI) are applied for primary safety endpoints.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Clinical Practice (GCP) and the Declaration of Helsinki. **Monitoring Plan:** Routine onsite and remote monitoring visits commensurate with Phase I oncology open-label standards. **Audit Trail:** Electronic Case Report Form (eCRF) tracking with stringent source document verification for AE reconciliation.

11. Study Identifiers & Governance

Primary ID: CPDR001X2X01B **Registry Number:** NCT04058756 **Sponsor/Lead Organization:** Novartis Pharmaceuticals Corporation **Study Title:** Rollover Study for Continued Safety and Tolerability in

Subjects Treated With Spartalizumab Alone or in Combination With Other Study Treatments **Official Regulatory Title:** An open-label, multi-center rollover protocol for continued characterization of safety and tolerability for subjects who have participated in a Novartis-sponsored spartalizumab study as single agent or in combination with other study treatments.

12. Clinical Framework (Oncology Specific)

Primary Condition: Advanced Solid Tumors / Neoplasms **Diagnosis Threshold:** Patients demonstrating sustained clinical benefit from prior spartalizumab study treatment. **Medical Methodology:** Anti-PD-1 Immune Checkpoint Inhibition **Optimization Target:** Maintenance of therapeutic effect and acceptable long-term safety profile.

13. Study Procedures & Methodology

Management Pathway: Standard oncology continuation/rollover clinical pathway **Education Protocol (HCP):** Site initiation and continuation training for the rollover protocol safety reporting **Education Protocol (Patient):** Informed consent review and ongoing AE self-reporting education **Quality Audit Mechanism:** Investigator compliance monitoring and central AE tracking

14. Observation & Follow-Up Schedule

Total Duration: Up to approx. 120 follow-up months (until study termination in 2030) **Onsite Visit Cadence:** Correlates with parent treatment cycles (e.g., Every 3 to 4 weeks) **Remote Monitoring Frequency:** Continuous monitoring per sponsor guidelines **Checklist Review Interval:** Every treatment cycle

15. Sign-off & Approval
