

1. Administrative & Study Identification

**Full Study Title:** A Study to Evaluate the Safety, Tolerability, and Efficacy of Escalating Doses of BMS-986463 in Participants With Select Advanced Malignant Tumors. **Short Title/Acronym:** BMS-986463 in Advanced Malignant Tumors **Protocol Number:** CA231-0000 **NCT Number:** NCT06476808 **Sponsor Name:** Bristol Myers Squibb **Investigational Product:** BMS-986463 (WEE1 kinase molecular glue degrader) **Phase of Development:** Phase 1 **Medical Monitor:** Clinical Trial Medical Director, Bristol Myers Squibb

---

2. Study Synopsis & Rationale

**2.1 Study Objective** **Primary Objective:** To evaluate the safety, tolerability, and preliminary efficacy of escalating doses of BMS-986463 in participants with select advanced malignant tumors. **Secondary Objectives:** To assess the pharmacokinetics (Cmax, AUC, Tmax) and preliminary efficacy parameters including Objective Response Rate (ORR), Disease Control Rate (DCR), and Duration of Response (DOR) up to 104 weeks.

**2.2 Background & Rationale** To address the critical unmet medical need for patients with advanced, unresectable or metastatic solid tumors (including non-small cell lung cancer, high-grade serous ovarian carcinoma, and uterine serous carcinoma). This first-in-human phase 1 trial tests a new targeted treatment (BMS-986463) to determine the optimal, safe dosage and how well the body tolerates the drug before advancing to larger efficacy trials.

---

3. Study Design & Methodology

**3.1 Design Framework** **Study Type:** Interventional **Control Type:** Single-arm (Dose escalation and dose expansion cohorts) **Blinding:** Open-label (None) **Randomization:** Non-Randomized

**3.2 Planned Enrollment & Duration** **Target N\$:** 240 evaluable participants **Number of Sites:** 13 locations initially recruiting **Estimated Study Start:** 06-Sep-2024 **Estimated Primary Completion:** 19-Dec-2028

---

4. Subject Selection (Eligibility Criteria)

**4.1 Inclusion Criteria** 1. Participants must have an Eastern Cooperative Oncology Group (ECOG) Performance Status of 0 or 1. 2. Participants must have an unresectable/metastatic carcinoma.

3. Participants must have at least 1 lesion accessible for biopsy in addition to the target lesion, from which a fresh pre-treatment biopsy must be obtained.

**4.2 Exclusion Criteria** 1. Participants must not have Leptomeningeal metastases. 2. Participants must not have concurrent malignancy (present during screening) requiring treatment or history of prior malignancy active within 2 years prior to treatment. 3. Participants must not have had any prior radiation therapy within 2 weeks prior to start of study treatment.

---

## 5. Intervention & Treatment Plan

**5.1 Investigational Regimen Dosage/Frequency:** Escalating doses of BMS-986463 in Arm 1 (dose escalation), followed by determined optimal dose in Arm 2 (dose expansion). **Route of Administration:** Administered per protocol. **Duration of Treatment:** Monitored continuously for up to 104 weeks.

**5.2 Concomitant & Prohibited Therapy Permitted:** Standard supportive care for managing disease-related symptoms. **Prohibited:** Concurrent anti-cancer therapy, and prior radiation therapy within 2 weeks prior to the start of study treatment.

---

## 6. Study Timeline & Visit Schedule

| Visit ID     | Window (Days)  | Key Activities/Procedures                                                          |
|--------------|----------------|------------------------------------------------------------------------------------|
| Screening    | Day -28 to 0   | Informed Consent, Medical History, Baseline Tumor Imaging, Fresh Biopsy Collection |
| Baseline     | Day 0          | Final Eligibility Confirmation, First Dose Administration                          |
| Interim      | Ongoing Cycles | Safety Labs, PK Assessments (Cmax, AUC, Tmax), Efficacy Scans                      |
| End of Study | Up to Week 104 | Final Tumor Response Assessment, Exit Interview, IP Accountability                 |

---

## 7. Outcome Measures (Endpoints)

**7.1 Primary Endpoint Definition:** Assessment of safety and tolerability via Dose-Limiting Toxicities (DLTs) and the incidence of treatment-related Adverse Events (AEs). **Measurement Method:** Clinical evaluation, laboratory monitoring, and standard safety assessments.

**7.2 Secondary & Exploratory Endpoints** 1. Maximum observed concentration (Cmax), Area under the concentration-time curve (AUC), and Time of maximum observed concentration (Tmax) up to 104 weeks. 2. Objective Response Rate (ORR), Disease Control Rate (DCR), and Duration of Response (DOR) up to 104 weeks.

---

## 8. Safety & Adverse Event Reporting

**Adverse Event (AE) Monitoring:** Continuous monitoring of adverse events via physician assessment and laboratory testing. **Serious Adverse Events (SAEs):** Mandated 24-hour reporting to the sponsor and Institutional Review Boards. **Data Monitoring Committee (DMC):** An internal Safety Review Committee will review safety and toxicity data to guide dose-escalation decisions.

---

## 9. Statistical Analysis Plan (SAP) Summary

**Analysis Populations:** Safety Set (all participants who receive  $\geq 1$  dose of study drug); Efficacy Evaluable Set (participants with measurable disease at baseline and  $\geq 1$  post-baseline scan). **Sample Size Justification:** Estimated  $N = 240$  appropriately scaled to identify the Maximum Tolerated Dose (MTD) in dose-escalation and to establish a preliminary safety/efficacy profile in the dose-expansion phase. **Handling of Missing Data:** Censored data methodologies for time-to-event endpoints (like DOR).

---

## 10. Quality Assurance & Regulatory Compliance

**GCP Compliance:** This study will be conducted in accordance with Good Clinical Practice (GCP) and the Declaration of Helsinki. **Monitoring Plan:** Standard clinical oncology monitoring combining onsite visits for source data verification and remote safety data review. **Audit Trail:** Secure eCRF entry, electronic data capture (EDC) locking, and timely data clarification resolution.

---

## 11. Study Identifiers & Governance

**Primary ID:** CA231-0000 **Registry Number:** NCT06476808 **Sponsor/Lead Organization:** Bristol Myers Squibb **Study Title:** A Study to Evaluate the Safety, Tolerability, and Efficacy of Escalating Doses of BMS-986463 in Participants With Select Advanced Malignant Tumors **Official Regulatory Title:** A Study to Evaluate the Safety, Tolerability, and Efficacy of Escalating Doses of BMS-986463 in Participants With Select Advanced Malignant Tumors.

---

## 12. Clinical Framework

**Primary Condition:** Advanced Malignant Tumors (e.g., unresectable or metastatic carcinoma) **Diagnosis Threshold:** Histologically confirmed advanced or metastatic disease accessible for biopsy. **Medical Methodology:** Sequential Assignment Dose Escalation and Expansion **Optimization Target:** Maximum Tolerated Dose (MTD) / Recommended Phase 2 Dose determination
