

1. Administrative & Study Identification

Study Title (Brief): A Study of Nivolumab in Patients With Head and Neck Cancer. **Full / Official Title:** A French Prospective, Non-interventional Research (NIR) of Nivolumab in Patients With Squamous Cell Carcinoma of the Head and Neck (SCCHN) Progressing on or After a Platinum-based Therapy **Short Title/Acronym:** ProNiHN
Posting ID: 656917008795274445 **Protocol Number:** CA209-9T9
NCT Number: NCT04050761
Sponsor / Company Name: Bristol Myers Squibb
Investigational Product: Nivolumab
Phase of Development: Not Applicable (Observational / Non-interventional)
Trial Status: COMPLETED **Medical Monitor:** Bristol Myers Squibb
Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To evaluate the Overall Survival (OS) of patients with recurrent or metastatic Squamous Cell Carcinoma of the Head and Neck (SCCHN) treated with nivolumab in a real-world setting. **Secondary Objectives:** To evaluate Overall Survival within Sub groups, Progression-free survival (PFS), and Overall response rate (ORR).

2.2 Background & Rationale A prospective real world evidence study of Nivolumab use in France in patient with recurrent or metastatic squamous cell carcinoma of the Head and Neck progressing on or after a platinum based therapy. This addresses the gap in real-world evidence regarding the efficacy, safety, and patient-reported outcomes outside of controlled clinical trial environments.

3. Study Design & Methodology

3.1 Design Framework Study Design Type: OBSERVATIONAL, Prospective, Non-interventional **Control Type:** Single-arm
Blinding: Open-label **Randomization:** N/A

3.2 Planned Enrollment & Duration Targeted Enrollment: 502 patients **Number of Sites:** Multicenter across France **Estimated Study Start:** 26-Jun-2019 **Estimated Primary Completion:** 18-Sep-2024 (Completed)

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Diagnosis of Squamous Cell Carcinoma Head and Neck (SCCHN) patients progressing on or after platinum-based therapy. 2. Diagnosis of SCCHN has been confirmed by histology or cytology (either at initial diagnosis or any time later during the course of the disease). 3. Treatment decision to initiate a treatment with nivolumab for the first time for the treatment of SCCHN (according to the label approved in France) has already been taken.

4.2 Exclusion Criteria 1. Patients previously treated with Nivolumab, Ipilimumab, or any other antibody or drug specifically targeting T-Cell Co stimulation or immune Checkpoint pathway. 2. Patients currently included in an interventional clinical trial for their SCCHN. 3. Other protocol defined inclusion/exclusion criteria could apply.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Investigational Product: nivolumab
Trade Names: Opdualag, Opdivo **ATC Code:** L01FF01 **Dosage/Frequency:** Administered as per standard clinical practice (typically 240 mg every 2 weeks or 480 mg every 4 weeks). **Route of Administration:** Intravenous (IV). **Duration of Treatment:** Until disease progression, unacceptable toxicity, or patient withdrawal. **EMA Product Information:** * [Opdivo EPAR](#) * [Opdualag EPAR](#)

5.2 Concomitant & Prohibited Therapy Permitted: Standard supportive care, subsequent systemic therapies, and concomitant medications as prescribed by the treating physician. **Prohibited:** Concurrent investigational anti-cancer therapies; immunosuppressive doses of systemic corticosteroids (except as permitted by label guidelines).

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures
Screening	Day -14 to 0	Informed Consent, Medical History, Baseline Characteristics
Baseline	Day 0	First Dose of Nivolumab, Baseline QoL assessments (FACT-H&N, EQ-5D)
Interim	Month 6 ± 14 days	Safety/Efficacy Assessment, QoL follow-up (Month 6 comparison)
End of Study		Disease Progression / Death Final Survival tracking, Subsequent systemic therapy recording

7. Outcome Measures (Endpoints)

7.1 Primary Outcomes 1. Overall Survival: Defined as the time from the start of nivolumab treatment to death from any cause,

measured via real-world survival tracking and clinical evaluation by the investigator.

7.2 Secondary Outcomes 1. Overall Survival within Sub groups 2. Progression-free survival (PFS) 3. Overall response rate (ORR)

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Real-world collection via routine HCP visits and clinical assessments. **Serious Adverse Events (SAEs):** Reported according to standard pharmacovigilance timelines (typically within 24 hours of site awareness). **Data Monitoring Committee (DMC):** Internal safety review mechanisms managed by the Sponsor.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: All enrolled patients who received at least one dose of nivolumab (Safety/Efficacy Set). **Sample Size Justification:** A sample size of ~500 patients adequately powers the study to provide robust real-world data and precise Kaplan-Meier estimates for survival outcomes. **Handling of Missing Data:** Censoring applied for time-to-event endpoints (OS, PFS) at the last known alive/progression-free date.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study was conducted in accordance with Good Pharmacoepidemiology Practices (GPP), Good Clinical Practice (GCP), and the Declaration of Helsinki. **Monitoring Plan:** Routine data quality checks suited for prospective observational registries. **Audit Trail:** eCRF locking and tracking of real-world data entries.

11. Study Identifiers & Governance

Primary ID: CA209-9T9 **Posting ID:** 656917008795274445 **Registry Number:** NCT04050761 **Sponsor/Lead Organization:** Bristol Myers Squibb **Study Title:** ProNiHN **Official Regulatory Title:** A French Prospective, Non-interventional Research (NIR) of Nivolumab in Patients With Squamous Cell Carcinoma of the Head and Neck (SCCHN) Progressing on or After a Platinum-based Therapy

12. Clinical Framework (SCCHN Specific)

Disease Areas / Conditions: Squamous Cell Carcinoma of the Head and Neck; Head and Neck Cancer; Head and Neck Carcinoma; Cancer

of the Head and Neck **Preferred UMLS Name:** Squamous Cell Carcinoma of Head and Neck **Name / Preferred Name:** Carcinoma **Semantic Type:** Neoplastic Process **Definition:** A malignant tumor arising from epithelial cells. Carcinomas that arise from glandular epithelium are called adenocarcinomas, those that arise from squamous epithelium are called squamous cell carcinomas, and those that arise from transitional epithelium are called transitional cell carcinomas (NCI Thesaurus). [<https://orcid.org/0000-0002-0736-9199>] **Diagnosis Threshold:** Recurrent/Metastatic disease progressing on or after platinum-based therapy **Medical Methodology:** Routine clinical practice administration of immunotherapy

Nomenclature & Classification Codes: * **MeSH Code:** D002277 * **HPO Codes:** HP:0030731 * **SNOMED ID:** 1187425009 * **SNOMED Hierarchy:** * 1187225007 | Malignant epithelial neoplasm | Malignant epithelial neoplasm (morphologic abnormality) * 118285006 | Epithelial neoplasm | Epithelial neoplasm (morphologic abnormality) * 108369006 | Neoplasm | Neoplasm (morphologic abnormality) * 1240414004 | Malignant neoplasm | Malignant neoplasm (morphologic abnormality)

13. Study Procedures & Methodology

Management Pathway: Standard clinical oncology pathway for recurrent/metastatic SCCHN **Education Protocol (HCP):** N/A (Observational real-world study) **Education Protocol (Patient):** N/A (Observational real-world study) **Quality Audit Mechanism:** Real-world tracking of treatment patterns, subsequent therapies, and Patient-Reported Outcomes.

14. Observation & Follow-Up Schedule

Total Duration: Minimum of 6 months follow-up for interim analysis, tracking ongoing until death/closure **Onsite Visit Cadence:** Follows the patient's standard clinical practice schedule **Remote Monitoring Frequency:** N/A (Observational data extraction) **Checklist Review Interval:** QoL questionnaires administered at Baseline and Month 6
