

Clinical Study Summary Report (CSSR)

Document Status: Draft | Version: 1.0 | Date: 02-Apr-2026

1. Administrative & Study Identification

Full Study Title: Retrospective Study Evaluating ABRYSV0 Vaccine Effectiveness Against Severe Lower Respiratory Tract Infection in Older Adults **Short Title/Acronym:** A Study to Learn About ABRYSV0 Vaccine in Older Adults to Prevent Severe Respiratory Syncytial Virus (RSV) Disease **Protocol Number:** C3671030 **NCT Number:** NCT06077968 **Sponsor Name:** Pfizer **Investigational Product:** ABRYSV0® vaccine (Pfizer) **Phase of Development:** N/A (Retrospective Observational Study) **Medical Monitor:** Pfizer Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To estimate the Vaccine Effectiveness (VE) of Pfizer's ABRYSV0® vaccine against RSV-related Lower Respiratory Tract Disease (LRTD) hospitalizations among Kaiser Permanente Southern California (KPSC) members who are eligible for vaccination per current Advisory Committee on Immunization Practices (ACIP) recommendations. **Secondary Objectives:** To determine ABRYSV0® VE against RSV-related LRTD hospitalizations among the immunocompetent and stratified by age group (60-74 years vs. 75 years and older). Additional objectives include assessing VE stratified by RSV subgroup (RSV A and RSV B), against Acute Respiratory Infection (ARI) endpoints, Emergency Department (ED) visits, death, and among high-risk subgroups.

2.2 Background & Rationale To evaluate the real-world effectiveness of Pfizer's ABRYSV0 vaccine in older adults. RSV is a virus that can cause infections in the airways leading to severe lower respiratory tract disease and hospitalization. This study addresses the need to understand how well the vaccine prevents these severe outcomes, the duration of protection across multiple RSV seasons (Substudy A), and the effectiveness of revaccination during routine clinical use (Substudy B).

3. Study Design & Methodology

3.1 Design Framework Study Type: Observational (Retrospective database study using existing healthcare data) **Control Type:** Test-negative design (TND) controls and unvaccinated cohorts **Blinding:** Open-label / N/A (Retrospective review of healthcare records) **Randomization:** N/A

3.2 Planned Enrollment & Duration Target **\$N\$:** No patients will be actively enrolled (Retrospective database study using existing data) **Number of Sites:** Kaiser Permanente Southern California (KPSC) network **Estimated Study Start:** 01-Nov-2023 **Estimated Primary Completion:** 01-May-2029

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Adults ages 60 years and older. 2. Adults who are eligible to receive the ABRYSVO vaccination per ACIP recommendations. 3. Members of the Kaiser Permanente Southern California (KPSC) healthcare network.

4.2 Exclusion Criteria 1. Patients who received another licensed or investigational RSV vaccine prior to the hospitalization or ED visit index date. 2. Patients whose index date falls within certain predefined exclusionary time windows from their vaccination date.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: Prior standard-of-care receipt of a single dose of Pfizer's ABRYSVO vaccine. (Substudy B assesses standard-of-care revaccination). **Route of Administration:** Intramuscular injection (standard vaccine administration). **Duration of Treatment:** Single administration (evaluated retrospectively for up to 2-3 years for duration of protection).

5.2 Concomitant & Prohibited Therapy Permitted: Standard-of-care treatments for respiratory infections and co-morbidities. **Prohibited:** Receipt of any other licensed or investigational RSV vaccines.

6. Study Timeline & Visit Schedule

Note: Because this is a retrospective database study, there are no active study visits. The timeline reflects standard-of-care data extraction. | Visit ID | Window (Days) | Key Activities/Procedures | | :--- | :--- | :--- | | **Index Date** | Day 0 | Date of hospitalization or Emergency Department (ED) admission for ARI/LRTD. | | **Vaccination Assessment** | \$\\ge\$ -21 Days | Verification of documented ABRYSVO vaccination at least 21 days prior to the index date. | | **Lab Testing** | Standard of Care | Standard-of-care RSV testing or salvage testing of remnant respiratory specimens using a full multiplex PCR panel. | | **Follow-up** | Up to 2-3 Years | Retrospective tracking across subsequent RSV seasons (Substudies A & B). |

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: Vaccine Effectiveness (VE) of ABRYSVO® against RSV-related Lower Respiratory Tract Disease (LRTD) hospitalizations. **Measurement Method:** Retrospective case-control study with a test-negative design (TND) assessing standard-of-care PCR multiplex testing or salvaged specimen testing.

7.2 Secondary & Exploratory Endpoints * ABRYSVO® VE against RSV-related LRTD hospitalizations stratified by age (60-74 vs $\geq$ 75 years) and immunocompetence. * VE against RSV-related Acute Respiratory Infection (ARI) hospitalizations and ED visits. * VE against critical outcomes including death and outcomes among high-risk patient subgroups. * Incidence rates and rate reductions for all-cause ARI and LRTD outcomes using an exploratory cohort design.

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Evaluated retrospectively through electronic health records and database analysis. **Serious Adverse Events (SAEs):** Standard healthcare data capture for hospitalizations, ICU admissions, and death. **Data Monitoring Committee (DMC):** N/A (Retrospective observational design using existing data).

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Eligible adults $\geq$ 60 years old presenting with LRTD or ARI in the KPSC network. **Sample Size Justification:** Retrospective database inclusion; driven by the number of eligible health records and available specimen tests during the RSV seasons. **Handling of Missing Data:** Standard-of-care specimens from patients without initial RSV testing will be salvaged and tested. Imputation of results for individuals experiencing LRTD without confirmation of RSV positivity/negativity may be conducted as a sensitivity analysis.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Pharmacoepidemiology Practices (GPP) and applicable observational research guidelines. **Monitoring Plan:** Centralized database extraction and retrospective data validation from KPSC records. **Audit Trail:** Electronic health record (EHR) traceability and vendor testing verification for remnant multiplex PCR panel testing.

11. Study Identifiers & Governance

Primary ID: C3671030 **Registry Number:** NCT06077968 **Sponsor/Lead Organization:** Pfizer **Study Title:** A Study to Learn About ABRYSVO Vaccine in Older Adults to Prevent Severe Respiratory Syncytial Virus (RSV) Disease **Official Regulatory Title:** Retrospective Study Evaluating ABRYSVO Vaccine Effectiveness Against Severe Lower Respiratory Tract Infection in Older Adults

12. Clinical Framework (RSV Specific)

Primary Condition: Respiratory Syncytial Virus (RSV) Infection **Diagnosis Threshold:** Positive standard-of-care RSV test or positive remnant specimen multiplex PCR test. **Medical Methodology:** Retrospective Case-Control (Test-Negative Design) & Cohort. **Optimization Target:** Prevention of severe RSV-related LRTD and ARI hospitalizations.

13. Study Procedures & Methodology

Management Pathway: Retrospective analysis of routine standard-of-care healthcare visits. **Education Protocol (HCP):** N/A (Observational). **Education Protocol (Patient):** N/A (Observational; no active enrollment). **Quality Audit Mechanism:** Data extraction audits and remnant sample testing by a contracted vendor.

14. Observation & Follow-Up Schedule

Total Duration: Follow-up of existing data spanning approximately 2 years (original study), up to 3 years (Substudy A), and 2 years post-revaccination (Substudy B). **Onsite Visit Cadence:** N/A (Retrospective). **Remote Monitoring Frequency:** Continuous EHR database review across multiple RSV seasons. **Checklist Review Interval:** Seasonal data extraction and endpoint analysis.

15. Sign-off & Approval
