

Clinical Study Summary Report (CSSR)

Document Status: Draft | Version: 1.0 | Date: 02-Apr-2026

1. Administrative & Study Identification

Full Study Title: An ambispective, non-interventional, multiple cohort study to assess the management of osimertinib treatment in patients with EGFRm non-small cell lung cancer

Short Title/Acronym: OSIREAL - Osimertinib RWE on EGFRm NSCLC in Spain

Protocol Number: D5162R00034

NCT Number: NCT06068049 **EudraCT Identifier:** N/A **CTIS Identifier:** N/A **Study Status:** Recruiting **Sponsor Name:** AstraZeneca

Investigational Product: Osimertinib

Phase of Development: Observational / Phase IV Equivalent

Medical Monitor: AstraZeneca Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To provide real-world evidence (RWE) on the effectiveness of osimertinib, specifically evaluating the 4-year real-world disease-free survival (rwDFS) rate in patients with EGFRm NSCLC. **Secondary Objectives:** To evaluate real-world Progression-Free Survival (rwPFS), Overall Survival (OS), patient characteristics, adherence, treatment exposure, safety, and quality of life in daily clinical practice.

2.2 Background & Rationale Lung cancer is the leading cause of cancer mortality worldwide, with lung adenocarcinoma being the major subtype. While osimertinib is indicated across multiple settings for EGFRm NSCLC, data regarding its real-world use—including long-term treatment duration, treatment beyond progression, and adjuvant/first-line effectiveness in Spain—remains a gap. This ambispective RWE study aims to bridge this gap by assessing standard clinical practice outcomes.

3. Study Design & Methodology

3.1 Design Framework Study Type: Observational, Ambispective, Multiple Cohort Study **Control Type:** N/A (Real-world cohort evaluation) **Allocation:** N/A **Intervention Model:** N/A **Blinding (Masking):** N/A (Open-label / Non-interventional) **Primary Purpose:** N/A **Randomization:** N/A

3.2 Planned Enrollment & Duration Target Estimated Enrollment (\$N\$): 500 adult patients **Number of Sites:** Multicenter (Spain) **Estimated Study Start Date:** 28-Jul-2023 **Estimated Primary Completion Date:** 15-Jun-2029 **Estimated Study Completion Date:** 15-Jun-2029

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Age ≥ 18 years at the start of osimertinib treatment (index date). 2. Patients histologically diagnosed with EGFRm NSCLC (before index date). 3. **Cohort 1:** First-line treatment for EGFRm locally advanced or metastatic NSCLC, not amenable to curative surgery or radiotherapy; OR **Cohort 2:** Stage IB-IIIA whose tumours have EGFR exon 19 deletions or exon 21 (L858R) substitution mutations, after complete tumor resection.

4.2 Exclusion Criteria 1. Lack of informed consent for observational data collection. 2. Concurrent participation in an interventional clinical trial that dictates treatment outside of standard real-world practice. 3. Contraindications to osimertinib as per standard oncology labeling.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: Osimertinib administered according to standard clinical practice and local labeling. **Route of Administration:** Oral **Duration of Treatment:** Variable; evaluated until clinical/radiological progression, unacceptable toxicity, or as determined by treating physician.

5.2 Concomitant & Prohibited Therapy Permitted: Standard of care medications. Osimertinib may be used in combination with pemetrexed and platinum-based chemotherapy where clinically indicated. **Prohibited:** N/A; treatment is driven by real-world standard clinical practice.

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures	:---
:---	:---	Screening / Index	Day 0 Informed Consent, Medical History, Histological Confirmation of EGFRm
Follow-up	Routine Care	Clinical assessments, effectiveness (rwDFS, rwPFS, OS) monitoring, and safety evaluations as per standard clinical practice	End of Study Year 4+ Final Data Abstraction, Survival Status, and Safety Reporting

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: 4-year real-world disease-free survival (rwDFS) rate for Cohort 2 (percentage of patients with clinical or radiological recurrence or death from any cause in the absence of disease recurrence 4 years after the start of osimertinib treatment). **Measurement Method:** Evaluated by the

treating physician according to standard clinical practice / Data abstraction from electronic medical records (EMR).

7.2 Secondary & Exploratory Endpoints 1. Real World Progression-Free Survival (rwPFS): time from start of osimertinib to clinical/radiological progression or death from any cause. 2. Overall Survival (OS), Quality of Life (QoL), Adherence, Treatment Exposure, and Safety Profile.

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Retrospective and prospective collection of AE data from medical records as per routine care. **Serious Adverse Events (SAEs):** Reported in alignment with real-world pharmacovigilance and sponsor guidelines. **Data Monitoring Committee (DMC):** Local oversight by independent ethics committees.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Real-World Evidence (RWE) Cohorts including Cohort 1 (Advanced/Metastatic) and Cohort 2 (Adjuvant Stage IB-IIIA). **Sample Size Justification:** Target enrollment of $N=500$ to provide sufficient precision for estimating the 4-year rwDFS rate and median rwPFS across cohorts. **Handling of Missing Data:** Standard handling for observational data, including right-censoring for survival analyses (Kaplan-Meier estimates).

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Pharmacoepidemiology Practices (GPP) and the Declaration of Helsinki. **Monitoring Plan:** Source data verification and data quality checks of electronic medical records against abstracted data. **Audit Trail:** Electronic Data Capture (EDC) system utilized with strict audit trails and regular data cleaning.

11. Study Identifiers & Governance

Primary ID: D5162R00034 **Registry Number:** NCT06068049 **Sponsor/Lead Organization:** AstraZeneca **Study Title:** OSIREAL - Osimertinib RWE on EGFRm NSCLC in Spain **Official Regulatory Title:** An ambispective, non-interventional, multiple cohort study to assess the management of osimertinib treatment in patients with EGFRm non-small cell lung cancer

12. Clinical Framework (Oncology Specific)

Primary Condition: Non-Small Cell Lung Cancer (NSCLC) **Diagnosis Threshold:** Histologically diagnosed with EGFRm (exon 19 deletions or exon 21 (L858R) substitution mutations) **Medical Methodology:** Standard Clinical Practice / Oncology Guidelines **Optimization Target:** Maximum disease-free and progression-free survival

13. Study Procedures & Methodology

Management Pathway: Real-world standard oncology care pathway for NSCLC **Education Protocol (HCP):** N/A (Observational Study) **Education Protocol (Patient):** N/A (Observational Study) **Quality Audit Mechanism:** Source data verification of EMRs against eCRFs

14. Observation & Follow-Up Schedule

Total Duration: Minimum 4 years (to capture the primary endpoint of 4-year rwDFS) **Onsite Visit Cadence:** Follow-up visits driven by routine clinical care cadence **Remote Monitoring Frequency:** Periodic EMR data abstraction **Checklist Review Interval:** Ongoing data entry as per clinical follow-ups

15. Sign-off & Approval
