

1. Administrative & Study Identification

**Full Study Title:** Assessing Short-term Treatment Satisfaction and Quality of Life in Patients With Hidradenitis Suppurativa Initiated on Secukinumab in Routine Clinical Practice in the United Arab Emirates: ILLUMINATE-HS, a Prospective Patient Surve  
**Brief Title:** Assessing Short-term Treatment Satisfaction and Quality of Life in Patients With Hidradenitis Suppurativa Initiated on Secukinumab **Short Title/Acronym:** ILLUMINATE-HS  
**Protocol Number:** CAIN457AAE02 **NCT Number:** NCT06785675 **Overall Status:** Recruiting **Sponsor Name:** Novartis Pharmaceuticals (Responsible Party) **Investigational Product:** Secukinumab  
**Intervention Type:** Other **Phase of Development:** Observational / Phase 4 **Medical Monitor:** Clinical Operations Lead, Novartis

---

2. Study Synopsis & Rationale

**2.1 Study Objective Primary Objective:** To evaluate patient-reported satisfaction and early quality of life experiences among patients with Hidradenitis Suppurativa (HS) who are newly initiated on secukinumab. **Secondary Objectives:** To assess changes in the Dermatology Life Quality Index (DLQI) and the pain Numeric Rating Scale (NRS) over a 24-week period.

**2.2 Background & Rationale** To address the lack of concrete data on the impact of pharmaceutical intervention on short-term patient satisfaction and quality of life (QoL) in patients with Hidradenitis Suppurativa (HS) in real-world settings, specifically in the Gulf Region (United Arab Emirates).

---

3. Study Design & Methodology

**3.1 Design Framework Study Type:** Observational (Longitudinal single-arm prospective patient survey based on EMRs and questionnaires) **Control Type:** Single-arm **Blinding:** Open-label  
**Randomization:** N/A

**3.2 Planned Enrollment & Duration Target \$N\$ (Number of Participants):** 60 participants **Number of Sites:** Multiple standard clinical practice sites across the UAE (including Abu Dhabi, Ras Al Khaimah, and Sharjah) **Estimated Study Start Date:** 10-Mar-2025  
**Estimated Primary Completion Date:** 30-Sep-2026 **Estimated Study Completion Date:** 30-Sep-2026

---

## 4. Subject Selection (Eligibility Criteria)

**4.1 Inclusion Criteria** 1. Patient with a confirmed diagnosis of active moderate to severe HS (Hurley Score 2-3). 2. Gender: All. Male or Female adult patients  $\geq 18$  years of age (18 Years to 99 Years; Adult, Older Adult) at the time of data collection. 3. Patient newly initiated on Secukinumab (first dose to coincide within 1 month of the signature of the informed consent). 4. Patients with a diagnosis of HS who are currently using antibiotics, have/have not undergone surgery as part of their routine clinical management are eligible for inclusion. 5. Patients with a diagnosis of HS who have a history of previous treatment with Adalimumab (or any other anti-TNF agent) as part of their routine clinical management or are biologic naïve are eligible for inclusion. 6. Agreed to sign an informed consent to be able to fill in the questionnaires.

**4.2 Exclusion Criteria** 1. Patients not fulfilling any of the abovementioned inclusion criteria. 2. Patient's refusal to be included in the study or refusal to sign the informed consent to fill in the questionnaires. 3. Participation in any other concurrent interventional clinical trial. 4. Contraindications to Secukinumab as per the local label.

---

## 5. Intervention & Treatment Plan

**5.1 Investigational Regimen Dosage/Frequency:** Secukinumab administered according to routine clinical practice guidelines in the UAE. **Route of Administration:** Subcutaneous **Duration of Treatment:** 24-week observational period.

**5.2 Concomitant & Prohibited Therapy Permitted:** Routine clinical management therapies including antibiotics and prior anti-TNF agents. **Prohibited:** Experimental/investigational treatments outside of the routine clinical pathway.

---

## 6. Study Timeline & Visit Schedule

|          |                                                  |                                              |                                                                                                                                                              |
|----------|--------------------------------------------------|----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Visit ID | Window (Days)                                    | Key Activities/Procedures                    | :---                                                                                                                                                         |
| :---     | :---                                             | <b>Screening/Baseline</b>                    | Day -30 to 0   Informed Consent, Demographics, HS Diagnosis (Hurley 2-3), Secukinumab initiation, TSQM, DLQI, and NRS Questionnaires     <b>End of Study</b> |
| Week 24  | Electronic Medical Record (EMR) Data Extraction, | Follow-up TSQM, DLQI, and NRS Questionnaires |                                                                                                                                                              |

---

## 7. Outcome Measures (Endpoints)

**7.1 Primary Endpoint Definition:** Treatment Satisfaction Questionnaire for Medication (TSQM) scores at Week 24.  
**Measurement Method:** Patient-reported outcome questionnaire

evaluating composite satisfaction scores ranging from 0 to 100. (Scoring is calculated by domain, summing the individual TSQM items in each domain, with higher scores indicating higher patient satisfaction).

**7.2 Secondary & Exploratory Endpoints** 1. Change from baseline in the Dermatology Life Quality Index (DLQI) at Week 24. (DLQI contains 10 simple, self-administered questions on a 4-point Likert scale). 2. Change from baseline in pain intensity measured by the Numeric Rating Scale (NRS) at Week 24. (NRS is scored from 0-10, with 0 meaning no pain and 10 meaning the worst pain imaginable).

---

## 8. Safety & Adverse Event Reporting

**Adverse Event (AE) Monitoring:** Data extracted from routine Electronic Medical Records (EMRs). **Serious Adverse Events (SAEs):** Pharmacovigilance reporting per standard real-world data collection guidelines. **Data Monitoring Committee (DMC):** N/A (Observational study in routine clinical practice).

---

## 9. Statistical Analysis Plan (SAP) Summary

**Analysis Populations:** All enrolled patients with valid baseline and Week 24 questionnaire data (Real-world analysis set). **Sample Size Justification:** Target enrollment of 60 participants intended to capture a representative HS population newly initiated on secukinumab across the United Arab Emirates. **Handling of Missing Data:** Standard observational analysis techniques for EMR/Survey data.

---

## 10. Quality Assurance & Regulatory Compliance

**GCP Compliance:** This study will be conducted in accordance with Good Clinical Practice (GCP) and the Declaration of Helsinki. **Monitoring Plan:** eCRF data source verification against EMR and patient-reported questionnaire answers. **Audit Trail:** eCRF locking and standard data clarification procedures.

---

## 11. Study Identifiers & Governance

**Primary ID:** CAIN457AAE02 **Registry Number:** NCT06785675 **Sponsor/Lead Organization:** Novartis Pharmaceuticals **Study Title:** ILLUMINATE-HS **Official Regulatory Title:** Assessing Short-term Treatment Satisfaction and Quality of Life in Patients With Hidradenitis Suppurativa Initiated on Secukinumab in Routine Clinical Practice in the United Arab Emirates: ILLUMINATE-HS, a Prospective Patient Survey

---

## 12. Clinical Framework (Hidradenitis Suppurativa Specific)

**Primary Condition:** Hidradenitis Suppurativa (HS) **Diagnosis Threshold:** Active moderate to severe HS (Hurley Score 2-3) **Medical Methodology:** Routine Clinical Practice / Standard of Care **Optimization Target:** Short-term treatment satisfaction and QoL improvement

---

## 13. Study Procedures & Methodology

**Management Pathway:** Routine clinical management of HS including biological intervention. **Education Protocol (HCP):** Standard prescribing guidelines for Secukinumab. **Education Protocol (Patient):** Informed consent process and orientation for TSQM, DLQI, and NRS questionnaires. **Quality Audit Mechanism:** Electronic Case Report Form (eCRF) cross-referenced with Electronic Medical Records (EMR).

---

## 14. Observation & Follow-Up Schedule

**Total Duration:** 24 weeks **Onsite Visit Cadence:** Baseline and Week 24 (aligning with routine care visits) **Remote Monitoring Frequency:** N/A (Real-world observational tracking) **Checklist Review Interval:** Questionnaire collection at Baseline and Week 24

---

## 15. Sign-off & Approval
