

1. Administrative & Study Identification

Full Study Title: SPECIAL INVESTIGATION FOR ABRYSV0 IN PREGNANT WOMEN AND INFANTS
Short Title/Acronym: ABRYSV0 Pregnancy Post-Marketing Study Japan
Protocol Number: C3671015
NCT Number: NCT06482099
Sponsor Name: Pfizer
Investigational Product: ABRYSV0 (RSVpreF vaccine)
Phase of Development: Observational / Phase Not Applicable (Post-marketing)
Medical Monitor: Pfizer CT.gov Call Center

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To confirm the safety of the RSVpreF vaccine (Abrysvo) in pregnant women and their infants under actual clinical practice in Japan. **Secondary Objectives:** To monitor real-world pregnancy outcomes, birth parameters, and neonatal health following maternal vaccination.

2.2 Background & Rationale To address the vulnerability of infants to Respiratory Syncytial Virus (RSV), which causes severe lower respiratory tract disease. Because infants have immature immune systems, maternal active immunization using Abrysvo is intended to generate neutralizing antibodies that cross the placenta to protect the infant. This post-marketing special investigation is being conducted to capture real-world safety, tolerability, and symptom data from recently vaccinated pregnant women and their infants following the commercial launch of Abrysvo.

3. Study Design & Methodology

3.1 Design Framework Study Type: Observational (Multicenter Cohort Study) **Control Type:** Single-arm (Vaccinated cohort)
Blinding: Open-label **Randomization:** N/A

3.2 Planned Enrollment & Duration Target N\$: 497 estimated patients **Number of Sites:** Multicenter (Japan) **Estimated Study Start:** 01-Oct-2024 **Estimated Primary Completion:** 11-Mar-2026

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Pregnant women who have been vaccinated with Abrysvo for the first time after Abrysvo is launched. 2. Vaccinated participants who have provided written consent regarding their participation in the study and entry of symptoms to an electronic Patient-Reported Outcomes (ePRO) system with the use of their devices (smartphones, tablets PC, etc.). 3. Pregnant women who have provided written consent to the participation of their infants in the study.

4.2 Exclusion Criteria 1. Pregnant women who have previously participated in the clinical trials of Abrysvo.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: Single dose of ABRYSVO **Route of Administration:** Intramuscular Injection **Duration of Treatment:** Single administration followed by observational tracking through the remainder of the pregnancy and early infancy.

5.2 Concomitant & Prohibited Therapy Permitted: Standard prenatal and postnatal care medications. **Prohibited:** Prior participation in Abrysvo clinical trials.

6. Study Timeline & Visit Schedule

Visit ID	Window	Key Activities/Procedures
1	Screening/Baseline	Day 0 Informed Consent, First-time ABRYSVO Vaccination, Medical History
2	Interim	Pregnancy Duration ePRO tracking: Participants log safety signals and symptoms via personal devices
3	End of Study	Postpartum/Infancy Infant birth outcomes, neonatal health assessments and follow-up tracking via ePRO

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: Incidence of adverse events (AEs) and serious adverse events (SAEs) in pregnant women and their infants to confirm real-world safety under actual clinical practice. **Measurement Method:** Electronic Patient-Reported Outcomes (ePRO) tracked via the participant's smartphone or tablet PC (or paper-PRO if necessary).

7.2 Secondary & Exploratory Endpoints * Pregnancy and birth outcomes (e.g., gestational age at delivery, health at birth). * Infant health outcomes and incidence of RSV-related lower respiratory tract illnesses during the follow-up period.

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Patient self-reporting through ePRO symptom tracking software. **Serious Adverse Events (SAEs):** Managed under standard post-marketing pharmacovigilance mechanisms. **Data Monitoring Committee (DMC):** Internal pharmacovigilance and surveillance managed by Pfizer.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Safety Set (all vaccinated pregnant women who provided consent and contributed ePRO data). **Sample Size Justification:** $N=497$ to adequately power the observation of real-world safety signals and rare events post-commercial launch. **Handling of Missing Data:** Standard observational cohort methods for missing patient-reported data.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Post-marketing Study Practice (GPSP) and local Japanese regulatory requirements. **Monitoring Plan:** Continuous digital data capture of ePRO entries. **Audit Trail:** Data tracking and logging native to the secure electronic patient-reported outcome (ePRO) application used on the participants' personal devices.

11. Study Identifiers & Governance

Primary ID: C3671015 **Registry Number:** NCT06482099 **Sponsor/Lead Organization:** Pfizer **Study Title:** SPECIAL INVESTIGATION FOR ABRYSVO IN PREGNANT WOMEN AND INFANTS **Official Regulatory Title:** Special Investigation for ABRYSVO Intramuscular Injection - Investigation in Pregnant Women and Infants

12. Clinical Framework (RSV & Maternal Immunization Specific)

Primary Condition: Respiratory Syncytial Virus (RSV) Infection prevention in infants **Diagnosis Threshold:** N/A (Prophylactic maternal vaccination) **Medical Methodology:** Maternal Active Immunization **Optimization Target:** Efficient transfer of maternal RSV neutralizing antibodies to the fetus to protect infants from birth

13. Study Procedures & Methodology

Management Pathway: Standard obstetric and maternal vaccination pathway in clinical practice. **Education Protocol (HCP):** Post-marketing guidance and safety reporting instructions. **Education Protocol (Patient):** Explanatory documents and training provided regarding their participation and the entry of symptoms into the ePRO system via smartphones/tablets. **Quality Audit Mechanism:** ePRO adherence monitoring and compliance tracking.

14. Observation & Follow-Up Schedule

Total Duration: From vaccination through the remainder of the pregnancy and post-delivery (up to 12 months for the infant, aligned with the RSV season). **Onsite Visit Cadence:** Standard prenatal visits; the study relies heavily on decentralized data collection. **Remote Monitoring Frequency:** Continuous self-reporting via ePRO. **Checklist Review Interval:** Data sweeps according to post-marketing observation milestones.
