

1. Administrative & Study Identification

Full Study Title: Retrospective Evaluation of Nivolumab in Adjuvant Esophageal Cancer/Gastroesophageal Junction Cancer: A Non-interventional Study in China **Short Title/Acronym:** CA209-1428 Study **Protocol Number:** CA209-1428 **NCT Number:** NCT06499298 **Posting ID:** 798177544169683806 **Sponsor/Company Name:** Bristol Myers Squibb **Investigational Product:** Nivolumab (Trade Names: Opdivo, Opdualag | ATC Code: L01FF01) **Phase of Development:** Not Applicable (Retrospective Observational Study) **Trial Status:** COMPLETED (Study has been completed) **Medical Monitor:** Bristol Myers Squibb Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To describe the real-world effectiveness and patterns of use of adjuvant nivolumab in adult participants with Stage II/III Esophageal Cancer/Gastroesophageal Junction Cancer (EC/GEJC) in China. **Secondary Objectives:** To evaluate participant outcomes after nivolumab treatment (including disease stage, recurrence, disease progression, medical imaging test results, and death information) and to measure the nivolumab treatment duration up to 1 year.

2.2 Background & Rationale To generate real-world evidence regarding the utilization and clinical outcomes of adjuvant nivolumab. The study aims to evaluate patients who initiated treatment in routine clinical practice between June 27, 2022, and October 31, 2023, filling real-world data gaps for stage II/III EC/GEJC treatments in the Chinese patient population.

3. Study Design & Methodology

3.1 Design Framework Study Type: Observational (Retrospective Cohort) **Control Type:** Single-arm (Non-comparative) **Blinding:** Open-label (N/A for retrospective analysis) **Randomization:** N/A

3.2 Planned Enrollment & Duration Targeted Enrollment (\$N\$): 64 participants **Number of Sites:** Sites across China **Estimated Study Start:** 03-Dec-2024 (Actual) **Estimated Primary Completion:** 16-Apr-2025 (Actual)

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Participants aged 18 years or older at the index date. 2. All patients must have Stage II or Stage III carcinoma of the esophagus or gastroesophageal junction and have histologically or cytologically confirmed predominant adenocarcinoma or squamous cell carcinoma esophageal or gastroesophageal junction cancer at the time of initial diagnosis. 3. Participants initiated nivolumab in adjuvant Esophageal Cancer (EC) or gastroesophageal junction cancer (GEJC) treatment within the index window.

4.2 Exclusion Criteria 1. Participation in a clinical trial of an investigational drug concurrently during the adjuvant nivolumab treatment. 2. From the date of diagnosis of EC or GJEC to the data end period, patients were diagnosed with a primary diagnosis of a cancer other than EC or GJEC that requires systemic or other treatment.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: Standard of care dosing for adjuvant nivolumab as utilized in routine clinical practice. **Route of Administration:** Intravenous (IV). **Duration of Treatment:** Up to 1 year of treatment duration evaluated retrospectively.

5.2 Concomitant & Prohibited Therapy Permitted: Standard of care therapies administered concurrently in routine clinical practice. **Prohibited:** Investigational drugs prescribed concurrently during the adjuvant nivolumab treatment period.

6. Study Timeline & Visit Schedule

(Note: As this is a retrospective observational study, traditional prospective visits do not apply. The timeline reflects data extraction points from medical records.)

Visit ID	Window (Days)	Key Activities/Procedures	:---
:---	:---	Screening	N/A Identification of eligible patients via Electronic Medical Records (EMR) screening
Baseline	Index Date (Day 1)	Extraction of demographics, prior cancer treatments, and disease stage at nivolumab initiation	
Interim	N/A	Retrospective chart abstraction for treatment patterns, disease progression, and medical imaging results	
End of Study	Up to 1 Year	Extraction of final outcomes, treatment duration, recurrence, and death information	

7. Outcome Measures (Endpoints)

7.1 Primary Outcomes 1. **Participant disease-free survival (DFS)** (Used to define the real-world effectiveness and patterns of use of adjuvant nivolumab in adult participants). **Measurement Method:** Retrospective Electronic Medical Record (EMR) and chart review.

7.2 Secondary Outcomes 1. Participant socio-demographics. 2. Date of tumor initial diagnosis. 3. Tumor location at initial diagnosis. 4. Participant outcomes after nivolumab treatment, including disease stage, recurrence, disease progression, medical imaging test results, and death information (Baseline and up to 1 year). 5. Nivolumab treatment duration (Up to 1 year). 6. Participant medical and cancer treatment history (Baseline).

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Retrospective abstraction of recorded adverse events from patient medical charts. **Serious Adverse Events (SAEs):** Evaluated retrospectively from clinical documentation adhering to standard pharmacovigilance guidelines for observational research. **Data Monitoring Committee (DMC):** N/A (Retrospective study without active intervention).

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: All eligible adult patients from the selected sites who initiated nivolumab in routine clinical practice during the predefined index window. **Sample Size Justification:** Target Enrollment of 64 participants to provide descriptive evidence based on the available cohort meeting all inclusion/exclusion criteria. **Handling of Missing Data:** Standard handling for observational real-world data; complete case analysis or multiple imputation applied as appropriate to the variable.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study is conducted in accordance with Good Pharmacoepidemiology Practices (GPP) and local patient privacy regulations. **Monitoring Plan:** Data quality and consistency checks applied during EMR data extraction and curation. **Audit Trail:** Secure audit trails maintained within the electronic data capture (EDC) system utilized by medical abstractors.

11. Study Identifiers & Governance

Primary ID: CA209-1428 **Posting ID:** 798177544169683806 **Registry Number:** NCT06499298 **Sponsor/Lead Organization:** Bristol Myers Squibb **Study Title:** Retrospective Evaluation of Nivolumab in Adjuvant Esophageal Cancer/Gastroesophageal Junction Cancer **Official Regulatory Title:** Retrospective Evaluation of Nivolumab in Adjuvant Esophageal Cancer/Gastroesophageal Junction Cancer: A Non-interventional Study in China

12. Clinical Framework (Oncology Specific)

Disease Areas / Conditions: Esophageal Cancer, Gastroesophageal Junction Cancer **Diagnosis Threshold:** Histologically or cytologically confirmed predominant adenocarcinoma or squamous cell carcinoma **Medical Methodology:** Retrospective Real-World Data (RWD) generation **Optimization Target:** Adjuvant immunotherapy integration mapping

13. Study Procedures & Methodology

Management Pathway: Standard oncology clinical pathway for EC/GEJC. **Education Protocol (HCP):** N/A (Retrospective non-interventional study). **Education Protocol (Patient):** N/A (Retrospective non-interventional study). **Quality Audit Mechanism:** Source data verification (SDV) on abstracted EMR data variables to ensure cohort reliability.

14. Observation & Follow-Up Schedule

Total Duration: Up to 1 year post-index date **Onsite Visit Cadence:** N/A (Retrospective chart review) **Remote Monitoring Frequency:** N/A **Checklist Review Interval:** Continuous abstraction window until study completion
