

1. Administrative & Study Identification

Full Study Title: A Phase I/IIa Multi-center, Open-label Master Protocol Dose Escalation and Expansion Study of AZD8205 as Monotherapy and in Combination With Anticancer Agents in Participants With Advanced Solid Tumors **Short Title/Acronym:** BLUESTAR **Protocol Number:** D6900C00001 **NCT Number:** NCT05123482 **Sponsor Name:** AstraZeneca **Investigational Product:** AZD8205 (Antibody Drug Conjugate), alone or in combination with other agents (e.g., Saruparib, Rilvegostomig) **Phase of Development:** Phase I/IIa **Medical Monitor:** AstraZeneca Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To determine the safety, tolerability, Recommended Phase 2 Dose (RP2D), and/or Maximum Tolerated Dose (MTD) of AZD8205 (Part A), and to evaluate the anti-tumor activity (Objective Response Rate) of AZD8205 as monotherapy in select solid tumors (Part B). **Secondary Objectives:** To assess confirmed complete or partial response, time to disease progression (Progression-Free Survival), Overall Survival (OS), pharmacokinetics (clearance and terminal elimination half-life), and the incidence of anti-drug antibodies (ADAs).

2.2 Background & Rationale To address the unmet medical need in patients with relapsed or metastatic solid tumors (such as breast, biliary tract, ovarian, endometrial, and squamous non-small cell lung cancers) who have progressed on prior standard of care therapies. AZD8205 is a novel antibody-drug conjugate (ADC) that has the potential to induce cancer cell death, which is being evaluated both alone and in combination with other anticancer therapies like PARP inhibitors (Saruparib) and bispecific antibodies (Rilvegostomig).

3. Study Design & Methodology

3.1 Design Framework Study Type: Interventional **Control Type:** Single-arm (Master Protocol Dose Escalation and Expansion) **Blinding:** Open-label **Randomization:** N/A (Sequential assignment/Dose escalation)

3.2 Planned Enrollment & Duration Target **NS:** 460 participants **Number of Sites:** Multi-center (Global) **Estimated Study Start:** [Nov-2021] **Estimated Primary Completion:** 28-Sep-2027

4. Subject Selection (Eligibility Criteria)

- 4.1 Inclusion Criteria** 1. Age $\geq$ 18 years. 2. Histologically or cytologically confirmed relapsed/metastatic solid tumors (breast cancer, ovarian cancer, Biliary Tract Carcinoma (BTC), endometrial cancer, or squamous non-small cell lung cancer). 3. Measurable disease per RECIST v1.1 and Eastern Cooperative Oncology Group (ECOG) Performance Status of 0-1.
- 4.2 Exclusion Criteria** 1. Spinal cord compression, history of leptomeningeal carcinomatosis, or untreated/unstable brain metastases. 2. History of (non-infectious) Interstitial Lung Disease (ILD)/pneumonitis that required steroids, or current ILD/pneumonitis. 3. Significant cardiac disease including symptomatic arrhythmia, uncontrolled hypertension, or acute coronary syndrome/myocardial infarction within 6 months prior to study.
-

5. Intervention & Treatment Plan

- 5.1 Investigational Regimen Dosage/Frequency:** AZD8205 administered at escalating dose levels to determine MTD/RP2D, given alone or in combination with Saruparib (AZD9574) or Rilvegostomig. **Route of Administration:** Intravenous (AZD8205 ADC) and oral/intravenous depending on the combination agent. **Duration of Treatment:** Continued until RECIST 1.1 defined disease progression, unacceptable toxicity, or cessation of study treatment.
- 5.2 Concomitant & Prohibited Therapy Permitted:** Standard supportive care medications allowed per protocol. **Prohibited:** Nitrosourea or mitomycin C within 6 weeks prior to first dose; any other anticancer treatment (cytotoxic treatment within 21 days, biological products within 28 days); investigational agents within 28 days or 5 half-lives.
-

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures	:---
:---	:---	Screening	Day -28 to 0 Informed Consent, Medical History, Baseline Imaging (RECIST v1.1), Safety Labs
Baseline	Day 0	First Dose, Vital Signs, PK/ADA Baseline Collection	Interim Every Cycle (e.g., Q3W/Q4W) Safety Labs, Efficacy Assessment (Tumor Imaging), AE Monitoring, PK/ADA collection
End of Study	Follow-up	Final Vital Signs, Exit Visit, Survival Follow-Up, IP Accountability	

7. Outcome Measures (Endpoints)

- 7.1 Primary Endpoint Definition:** Incidence of Dose-Limiting Toxicities (DLTs) to establish safety and MTD/RP2D (Part A). For

Part B, Objective Response Rate (ORR). **Measurement Method:** Evaluated using NCI CTCAE v5.0 for safety and RECIST v1.1 for tumor response.

7.2 Secondary & Exploratory Endpoints * Progression-Free Survival (PFS) (Time from first dose until RECIST 1.1 defined disease progression). * Overall Survival (OS) (Time from first dose until death due to any cause). * Pharmacokinetics (Volume of plasma clearance and terminal elimination half-life). * Incidence of Anti-Drug Antibodies (ADAs).

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Monitored continuously and graded according to NCI CTCAE v5.0 criteria. **Serious Adverse Events (SAEs):** Reported to the sponsor typically within 24 hours of investigator awareness. **Data Monitoring Committee (DMC):** Internal Dose Escalation Review Committee responsible for analyzing DLTs and clearing new dose cohorts.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Safety Set (all patients who receive ≥ 1 dose of study treatment); Efficacy Set (Intent-to-Treat for expansion cohorts). **Sample Size Justification:** Target $N = 460$ participants to satisfy dose-escalation statistical models and to provide adequate precision for estimating ORR in the dose-expansion sub-cohorts. **Handling of Missing Data:** Missing time-to-event data (e.g., PFS, OS) will be handled via standard censoring rules. No imputation is typically performed for safety missing data.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Clinical Practice (GCP) and the Declaration of Helsinki. **Monitoring Plan:** Standard risk-based monitoring including onsite and remote monitoring visits to assess protocol compliance. **Audit Trail:** Complete electronic Case Report Form (eCRF) locking and tracking using standard data clarification procedures.

11. Study Identifiers & Governance

Primary ID: D6900C00001 **Registry Number:** NCT05123482 **Sponsor/Lead Organization:** AstraZeneca **Study Title:** BLUESTAR **Official Regulatory Title:** A Phase I/IIa Multi-center, Open-label Master Protocol Dose Escalation and Expansion Study of AZD8205 as

12. Clinical Framework (Oncology Specific)

Primary Condition: Advanced/Metastatic Solid Malignancies (Breast, Ovarian, Biliary Tract, Endometrial, Squamous NSCLC)
Diagnosis Threshold: Histologically or cytologically confirmed metastatic or locally advanced/recurrent disease
Medical Methodology: targeted therapy utilizing an Antibody-Drug Conjugate (ADC), alone or combined with PARP inhibition or immuno-oncology agents
Optimization Target: Identification of the Maximum Tolerated Dose (MTD) / Recommended Phase 2 Dose (RP2D)

13. Study Procedures & Methodology

Management Pathway: Standard dose-escalation and dose-expansion clinical trial pathways
Education Protocol (HCP): RECIST v1.1 evaluation criteria and NCI CTCAE v5.0 AE grading training
Education Protocol (Patient): Clinical trial informed consent and treatment schedule education
Quality Audit Mechanism: Routine source data verification (SDV) and central data monitoring

14. Observation & Follow-Up Schedule

Total Duration: Follow-up until disease progression or death (estimated through 2027)
Onsite Visit Cadence: Treatment cycle intervals (e.g., Q3W/Q4W for IV infusions)
Remote Monitoring Frequency: Between treatment cycles or during survival follow-up
Checklist Review Interval: Tumor imaging assessments (RECIST v1.1) every 8-12 weeks
