

1. Administrative & Study Identification

Full Study Title: Prospective NIS to Generate Real-World-Data on Effectiveness and Safety of First-line Therapy With Chemotherapy Combined With Durvalumab Followed by Maintenance Therapy With Durvalumab or Durvalumab + Olaparib in Endometrial Cancer
Short Title/Acronym: DUOLife
Protocol Number: D9311R00001
NCT Number: NCT06890273
Sponsor Name: AstraZeneca
Investigational Product: Durvalumab (IMFINZI®) and Olaparib (Lynparza®) with Chemotherapy (Carboplatin/Paclitaxel)
Phase of Development: Observational / Non-Interventional Study (NIS)
Medical Monitor: AstraZeneca Clinical Study Information Center

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective: To describe the outcomes, including effectiveness, safety, and patient-reported outcomes (PRO), of patients with primary advanced and recurrent endometrial cancer (EC) treated with two approved first-line (1L) regimens of Carboplatin/Paclitaxel/Durvalumab (CPD) followed by durvalumab maintenance or durvalumab and olaparib maintenance in Germany.
Secondary Objectives: To better understand the characteristics of patients with primary advanced or recurrent EC that benefit most from maintenance therapy with durvalumab or durvalumab and olaparib.

2.2 Background & Rationale

The study aims to gather real-world clinical and PRO data to understand the real-world effectiveness and safety of standard-of-care treatments for advanced or recurring endometrial cancer. By tracking patients receiving CPD followed by maintenance therapies based on their DNA mismatch repair (MMR) status (dMMR or pMMR), researchers hope to gather vital insights that could influence and improve future treatment strategies and patient care decisions without altering their standard care routine.

3. Study Design & Methodology

3.1 Design Framework

Study Type: Observational, Prospective Non-Interventional Study (NIS)
Control Type: Single-arm observational cohorts (based on dMMR vs.

pMMR status)
Blinding: Open-label (Routine Clinical Practice)
Randomization: N/A

3.2 Planned Enrollment & Duration

Target \$N\$: 150 (Observational cohorts)
Number of Sites: 33 locations (Germany)
Estimated Study Start: 20-May-2025
Estimated Primary Completion: 30-Sep-2028

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

1. Women aged ≥ 18 years at the time of screening.
2. Patient has pathologically documented primary advanced (FIGO III and IV) epithelial EC OR recurrent disease that is unlikely to be cured and where the multidisciplinary tumor board decision is systemic therapy. (Carcinosarcomas are allowed).
3. Patient is intended or initiated to receive 1L CPD followed by maintenance therapy with durvalumab (dMMR cohort) or with durvalumab and olaparib (pMMR cohort) according to the European Summary of Product Characteristics (SmPC) prior to enrollment. Recruitment of patients that already started and may have received up to 2 cycles of CPD is allowed but will be capped to 25% of the study population.
4. Patient is eligible for treatment with durvalumab and/or olaparib as specified in the IMFINZI® and Lynparza® SmPC.

4.2 Exclusion Criteria

1. Male gender (biological sex restricted to females).
 2. Healthy volunteers.
 3. Any condition or prior treatment contraindicating the use of durvalumab or olaparib according to their respective SmPCs.
-

5. Intervention & Treatment Plan

5.1 Investigational Regimen

Dosage/Frequency: Routine clinical dosing of 1L CPD, followed by maintenance durvalumab for the dMMR cohort, or maintenance durvalumab + olaparib for the pMMR cohort, in accordance with the SmPC.

Route of Administration: Intravenous (Chemotherapy and Durvalumab) and Oral (Olaparib).

Duration of Treatment: * 12-month tracking period for progression or start of a new treatment.

5.2 Concomitant & Prohibited Therapy

Permitted: Standard clinical care for endometrial cancer and managing comorbidities.

Prohibited: Therapies strictly contraindicated in the IMFINZI® and Lynparza® SmPCs.

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures
Screening	Day -14 to 0	Informed Consent, Pathological Documentation, MMR Status Testing
Baseline	Day 0	Initiation of 1L CPD Regimen
Interim	Over 12 Months	Maintenance phase tracking (Durvalumab +/- Olaparib), PRO Collection, Safety Monitoring
End of Study	Month 12	Final tracking for time to progression or start of new treatment

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint

Definition: Time to start a new treatment or experience disease progression evaluated over a 12-month period.

Measurement Method: Real-world clinical tracking and physician assessments during routine clinical care.

7.2 Secondary & Exploratory Endpoints

Overall Effectiveness and Safety profiles in routine clinical practice.

Patient-Reported Outcomes (PRO).

* Identification of patient characteristics that benefit most from maintenance therapy.

8. Safety & Adverse Event Reporting

- **Adverse Event (AE) Monitoring:** Standard collection via routine clinical practice records.
 - **Serious Adverse Events (SAEs):** Reported per standard pharmacovigilance regulations for non-interventional studies.
 - **Data Monitoring Committee (DMC):** Supervised by AstraZeneca Pharmacovigilance and local ethical guidelines.
-

9. Statistical Analysis Plan (SAP) Summary

- **Analysis Populations:** Real-world observational populations divided by DNA mismatch repair status (dMMR vs. pMMR cohorts).
 - **Sample Size Justification:** Descriptive statistics suited for real-world evidence generation in the target region.
 - **Handling of Missing Data:** Standard imputation methods for observational and PRO datasets.
-

10. Quality Assurance & Regulatory Compliance

- **GCP Compliance:** This study will be conducted in accordance with Good Pharmacoepidemiology Practices (GPP) and local German NIS regulations.
 - **Monitoring Plan:** Collection of real-world data without altering standard care routines.
 - **Audit Trail:** Secure data capture of PROs and electronic case report forms (eCRF) in accordance with patient privacy regulations.
-

11. Study Identifiers & Governance

- **Primary ID:** D9311R00001
 - **Registry Number:** NCT06890273
 - **Sponsor/Lead Organization:** AstraZeneca
 - **Study Title:** DUOLife
 - **Official Regulatory Title:** Prospective NIS to Generate Real-World-Data on Effectiveness and Safety of First-line Therapy With Chemotherapy Combined With Durvalumab Followed by Maintenance Therapy With Durvalumab or Durvalumab + Olaparib in Endometrial Cancer
-

12. Clinical Framework (Endometrial Cancer Specific)

- **Primary Condition:** Primary Advanced (FIGO III/IV) or Recurrent Endometrial Cancer
 - **Diagnosis Threshold:** Pathologically documented epithelial EC
 - **Medical Methodology:** 1L Chemotherapy (Carboplatin/Paclitaxel) + Durvalumab followed by Durvalumab +/- Olaparib maintenance
 - **Optimization Target:** Disease control and tracking of time to next treatment/progression.
-

13. Study Procedures & Methodology

- **Management Pathway:** Routine standard of care conforming to the European SmPC, including obtaining Informed Consent.
 - **Education Protocol (HCP):** N/A (Non-interventional observational setting)
 - **Education Protocol (Patient):** Real-world standard care counseling
 - **Quality Audit Mechanism:** Tracking PROs and longitudinal progression outcomes.
-

14. Observation & Follow-Up Schedule

- **Total Duration:** Real-world tracking extending through September 2028

- **Onsite Visit Cadence:** Dictated by standard routine clinical practice
- **Remote Monitoring Frequency:** N/A (PRO survey schedules per registry requirements)
- **Checklist Review Interval:** Tracked continuously over a primary 12-month period per patient, with screening from Day -14 to 0, baseline at Day 0, interim tracking over 12 months, and end of study at Month 12.

15. Sign-off & Approval

	Role		Name		Signature		Date	
	:---		:---		:---		:---	
	Principal Investigator		[Name]		_____		[DD-MMM-YYYY]	
	Clinical Operations Lead		[Name]		_____		[DD-MMM-YYYY]	
	Lead Statistician		[Name]		_____		[DD-MMM-YYYY]
