

1. Administrative & Study Identification

Full Study Title: A non-interventional, observational qualitative interview study of patients with HR+/HER2- metastatic breast cancer who received Capivasertib + Fulvestrant **Short Title/ Acronym:** Interview of Patients With HR+/HER2- Metastatic Breast Cancer Who Received Capivasertib + Fulvestrant **Protocol Number:** D3615R00004 **NCT Number:** NCT07008963 **Sponsor Name:** AstraZeneca **Investigational Product:** Capivasertib + Fulvestrant **Phase of Development:** Observational / Non-interventional **Medical Monitor:** AstraZeneca Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To explore patient experiences and attitudes toward taking Capivasertib + Fulvestrant as directed. **Secondary Objectives:** To capture self-reported tolerability experiences and evaluate factors related to the patients' ability to follow the prescribed regimen and stay on treatment.

2.2 Background & Rationale To address the gap in understanding the real-world tolerability and adherence to Capivasertib + Fulvestrant among patients with HR+/HER2- metastatic breast cancer. While clinical trials assess efficacy and controlled safety, this study utilizes qualitative interviews to provide insight into the patient's lived experience, ability to adhere to complex dosing schedules (e.g., 4 days on, 3 days off), and self-reported tolerability in a non-clinical trial setting.

3. Study Design & Methodology

3.1 Design Framework Study Type: Observational (Cross-sectional qualitative patient interviews) **Control Type:** Single-arm **Blinding:** Open-label / Unblinded **Randomization:** N/A

3.2 Planned Enrollment & Duration Target \$N\$: 48 evaluable patients **Number of Sites:** United States (Remote/Multicenter) **Estimated Study Start:** 31-Jul-2025 **Estimated Primary Completion:** 28-Nov-2025

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Adult (over the age of 18 years). 2. Diagnosed with HR+/HER2- metastatic breast cancer. 3. Received at

least 1 week of capivasertib + fulvestrant (Patients will be invited to provide documents demonstrating the use of capivasertib, but can participate even if unable to obtain such documentation).

4.2 Exclusion Criteria 1. Patients who had discontinued capivasertib for more than 6 months before the date of the interview. 2. Unable or unwilling to follow study procedures (including providing informed consent) or not proficient in spoken English, as assessed by the moderator. 3. Receiving capivasertib in a clinical trial setting. 4. Patients who are not able to recall instructions for the administration of capivasertib in a manner consistent with the labeling (e.g. 4 days on followed by 3 days off).

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: Real-world prescription of Capivasertib (administered 4 days on followed by 3 days off) in combination with Fulvestrant. **Route of Administration:** Oral (Capivasertib) + Intramuscular (Fulvestrant). **Duration of Treatment:** N/A (Observational; patients must have received at least 1 week of the combination).

5.2 Concomitant & Prohibited Therapy Permitted: Standard of care therapies as prescribed by the patient's treating physician. **Prohibited:** Concurrent participation in a clinical trial evaluating Capivasertib.

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures
Screening	Day -14 to 0	Informed Consent, Eligibility Verification, Review of Medical Records (if available)
Baseline / Interview	Day 0	Qualitative cross-sectional patient interview session (Self-reported tolerability and adherence assessment)
End of Study	Day 0	End of study following interview completion

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: Self-reported tolerability experiences related to patients' ability to follow the prescribed regimen and stay on treatment among those who received capivasertib + fulvestrant. **Measurement Method:** Qualitative patient interviews.

7.2 Secondary & Exploratory Endpoints Patient attitudes toward taking Capivasertib + Fulvestrant as directed. Ability to recall

and comprehend the complex dosing administration instructions (e.g., 4 days on, 3 days off).

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Patient-reported during the qualitative interview. As a non-interventional study, any relevant spontaneous safety reports mentioned during the interview will be processed according to standard AstraZeneca pharmacovigilance and real-world evidence guidelines. **Serious Adverse Events (SAEs):** Escalated per routine post-marketing safety data reporting protocols. **Data Monitoring Committee (DMC):** Internal safety oversight managed by AstraZeneca.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Interviewed Patient Set (\$N=48\$). **Sample Size Justification:** A sample size of 48 is adequately planned to reach thematic saturation for qualitative behavioral and tolerability endpoints. **Handling of Missing Data:** N/A for cross-sectional qualitative interview methodology.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Clinical Practice (GCP) and the Declaration of Helsinki. **Monitoring Plan:** Quality review of interview transcripts and moderator evaluations. **Audit Trail:** Secure storage of anonymized interview audio recordings and transcripts; qualitative coding audit mechanisms.

11. Study Identifiers & Governance

Primary ID: D3615R00004 **Registry Number:** NCT07008963 **Sponsor/Lead Organization:** AstraZeneca **Study Title:** Interview of Patients With HR+/HER2- Metastatic Breast Cancer Who Received Capivasertib + Fulvestrant **Official Regulatory Title:** A non-interventional, observational qualitative interview study of patients with HR+/HER2- metastatic breast cancer who received Capivasertib + Fulvestrant

12. Clinical Framework (Breast Cancer Specific)

Primary Condition: HR+/HER2- Metastatic Breast Cancer **Diagnosis Threshold:** Confirmed HR+/HER2- metastatic breast cancer treated in a real-world setting **Medical Methodology:** Targeted Therapy +

Endocrine Therapy **Optimization Target:** Patient adherence and real-world tolerability management

13. Study Procedures & Methodology

Management Pathway: Standard clinical pathway for HR+/HER2-Metastatic Breast Cancer **Education Protocol (HCP):** N/A (Observational Study) **Education Protocol (Patient):** N/A (Observational Study) **Quality Audit Mechanism:** Qualitative thematic coding checks and transcript verifications

14. Observation & Follow-Up Schedule

Total Duration: Single cross-sectional contact **Onsite Visit Cadence:** Single interview session (Remote/Virtual or Onsite depending on patient preference) **Remote Monitoring Frequency:** N/A **Checklist Review Interval:** N/A
