

1. Administrative & Study Identification

Full Study Title: Master Screening Study to Determine Biomarker Status and Potential Trial Eligibility for Patients With Malignant Tumors **Short Title/Acronym:** Screening Study for Participants With Malignant Tumors **Protocol Number:** BX43361 **NCT Number:** NCT05419375 **Sponsor Name:** Hoffmann-La Roche **Investigational Product:** Centralized Screening Platform (Non-Investigational Medicinal Product / Biomarker Testing) **Phase of Development:** Phase 2 **Medical Monitor:** Hoffmann-La Roche Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective * **Primary Objective:** To determine the biomarker status of a participant's tumor tissue and use that status to determine their eligibility to participate in a linked Roche clinical trial. * **Secondary/Exploratory Objectives:** Characterization of biomarker profiles (e.g., EGFR, ALK, ROS1, KRAS, BRAF, HER2, RET, MET, NTRK1/2/3, PD-L1) and the documentation of patients' subsequent treatment.

2.2 Background & Rationale Targeting oncogenic driver alterations has proven to be an effective clinical approach across many tumor types. As a result of the approval of targeted therapies, molecular biomarker testing is commonly recommended before the initiation of treatment. This master screening study aims to streamline patient recruitment and improve access to clinical trials where biomarker testing is not currently performed as part of routine care, especially when the biomarkers of interest are at low prevalence.

3. Study Design & Methodology

3.1 Design Framework * **Study Type:** Interventional (Master Screening Protocol) * **Control Type:** Single-arm (Screening only) * **Blinding:** Open-label * **Randomization:** N/A

3.2 Planned Enrollment & Duration * **Target \$\$\$:** 15,000 patients * **Number of Sites:** Global (51+ sites across 10+ countries) * **Estimated Study Start:** * **Estimated Primary Completion:** [N/A - Ongoing/Completed per cohort]

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Age $\geq$ 18 years. 2. Confirmed availability of a representative formalin-fixed, paraffin-embedded (FFPE) tumor specimen obtained prior to chemoradiation or the start of any treatment. 3. Considered by the principal investigator (PI) to be a candidate for a linked clinical trial with an investigational medicinal product (e.g., locally advanced, unresectable Stage III NSCLC, or Stage II/IIIA/select IIIB NSCLC). 4. Eastern Cooperative Oncology Group (ECOG) performance status of 0, 1, or 2 (depending on the specific linked trial cohort).

4.2 Exclusion Criteria 1. History of malignancy other than NSCLC within 5 years prior to screening, except for malignancies with a negligible risk of metastasis or death. 2. Significant liver or cardiovascular disease. 3. Prior allogenic stem-cell or solid-organ transplantation. 4. Any condition that may affect the interpretation of study results.

5. Intervention & Treatment Plan

5.1 Investigational Regimen * **Dosage/Frequency:** No therapeutic intervention is administered in this study. Patients undergo centralized tissue-based molecular testing and PD-L1 immunohistochemistry (IHC) screening. * **Route of Administration:** In vitro diagnostic testing of biopsied tumor tissue. * **Duration of Treatment:** Screening period from Day -28 to Day 1.

5.2 Concomitant & Prohibited Therapy * **Permitted:** Standard of care treatments as deemed appropriate by the treating physician. * **Prohibited:** N/A (Observational screening phase prior to trial enrollment).

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures
Screening	Day -28 to 0	Informed Consent, Medical History, ECOG Assessment, FFPE Tumor Specimen collection and submission
Baseline / End of Study	Day 1	Centralized molecular testing, Return of biomarker results, Determination of eligibility for a linked Roche clinical trial

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint * **Definition:** Determination of the biomarker status of patients and their eligibility to participate in a linked clinical trial. * **Measurement Method:** Validated centralized molecular tests for genetic alterations (EGFR, ALK, ROS1, KRAS, BRAF, HER2, RET, MET, NTRK) and PD-L1 IHC.

7.2 Secondary & Exploratory Endpoints * Characterization of biomarker profiles in the screened population. * Patient assignment tracking and subsequent treatment paths.

8. Safety & Adverse Event Reporting

- **Adverse Event (AE) Monitoring:** Routine safety monitoring pertaining to the tumor biopsy procedure (if performed specifically for screening).
 - **Serious Adverse Events (SAEs):** Reported within 24 hours (e.g., complications resulting from a fresh biopsy).
 - **Data Monitoring Committee (DMC):** Internal safety and data review managed by Hoffmann-La Roche.
-

9. Statistical Analysis Plan (SAP) Summary

- **Analysis Populations:** All screened patients with an evaluable FFPE tumor specimen.
 - **Sample Size Justification:** Target enrollment of up to 15,000 patients provides statistical power to identify patients with rare oncogenic driver mutations (low prevalence biomarkers) for linked therapeutic trials.
 - **Handling of Missing Data:** Descriptive statistics utilized for biomarker prevalence; indeterminate tests are excluded from the specific biomarker prevalence denominators.
-

10. Quality Assurance & Regulatory Compliance

- **GCP Compliance:** This study will be conducted in accordance with Good Clinical Practice (GCP) and the Declaration of Helsinki.
 - **Monitoring Plan:** Centralized monitoring of tissue sample chain-of-custody, laboratory turnaround times, and site protocol compliance.
 - **Audit Trail:** eCRF locking and rigorous data query resolution to ensure accurate biomarker matching.
-

11. Study Identifiers & Governance

- **Primary ID:** BX43361
 - **Registry Number:** NCT05419375
 - **Sponsor/Lead Organization:** Hoffmann-La Roche
 - **Study Title:** Screening Study for Participants With Malignant Tumors
 - **Official Regulatory Title:** Master Screening Study to Determine Biomarker Status and Potential Trial Eligibility for Patients With Malignant Tumors
-

12. Clinical Framework (Oncology/Biomarker Specific)

- **Primary Condition:** Solid Tumors / Non-Small Cell Lung Cancer (NSCLC)
 - **Diagnosis Threshold:** Histologically confirmed malignant tumors (e.g., Stage II to Stage III NSCLC)
 - **Medical Methodology:** Centralized molecular profiling / Next-Generation Sequencing (NGS)
 - **Optimization Target:** Identification of oncogenic driver alterations to match patients with targeted investigational therapies
-

13. Study Procedures & Methodology

- **Management Pathway:** Master screening protocol directing patients to biomarker-specific linked therapeutic trials.
 - **Education Protocol (HCP):** Site training on tissue acquisition, FFPE preparation, and shipment requirements to the central laboratory.
 - **Education Protocol (Patient):** Informed consent regarding genomic testing and potential downstream trial eligibility.
 - **Quality Audit Mechanism:** Central laboratory validation of tumor cellularity and assay performance metrics.
-

14. Observation & Follow-Up Schedule

- **Total Duration:** Up to 28 days for the screening window.
 - **Onsite Visit Cadence:** Initial screening visit for biopsy/tissue acquisition; follow-up visit for result disclosure.
 - **Remote Monitoring Frequency:** N/A (Screening results drive immediate transition to a linked therapeutic trial or standard of care).
 - **Checklist Review Interval:** Continuous tracking of biopsy processing and testing turnaround times.
-

15. Sign-off & Approval
