

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	Phase I Multicenter, Open-Label, First-in-Human Study of BMS-986497 (ORM-6151) as a Monotherapy, in Double Combination With Azacitidine and in Triple Combination With Azacitidine and Venetoclax in Subjects With Relapsed or Refractory Acute Myeloid Leukemia or Myelodysplastic Syndrome
Short Title:	Study of BMS-986497 (ORM-6151) as a Monotherapy, in Double and Triple Combination With Azacitidine and Venetoclax in Participants With Relapsed or Refractory Acute Myeloid Leukemia or Myelodysplastic Syndrome
Protocol Number:	1064103917570427088
NCT Number:	NCT06419634
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	azacitidine
Phase:	PHASE1
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Incidence of dose-limiting toxicities (DLTs) 2. Incidence of treatment-emergent adverse events (TEAEs) 3. Determine the Recommended Phase 2 Dose (RP2D) of BMS-986497 as Monotherapy
Secondary Obj.:	1. Maximum concentration (Cmax) 2. Time to reach Cmax (Tmax) 3. Area under the curve from time 0 to last quantifiable concentration (AUC0-last)

2.2 Background & Rationale

The purpose of this study is to assess the safety, tolerability, drug levels, drug efficacy and determine the recommended dose of BMS-986497 as a monotherapy, in double combination with Azacitidine and in triple combination with Azacitidine and Venetoclax in participants with relapsed or refractory acute myeloid leukemia (AML) or myelodysplastic syndrome (MDS).

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE1, Status: RECRUITING
Target N:	105

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

* Adults with primary or secondary relapsed and/or refractory acute myeloid leukemia (AML) or myelodysplastic syndrome (MDS).

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * Detectable levels of cluster of differentiation 33 (CD33) expression.
- * Failed alternative therapies with established benefit.
- * Eastern Cooperative Oncology Group (ECOG) performance status ?2 and adequate organ function.

4.2 Exclusion Criteria

- * Acute Promyelocytic Leukemia.
- * Clinically active central nervous system leukemia.
- * Active malignant solid tumor.
- * Pregnant or breastfeeding.
- * Other protocol-defined inclusion/exclusion criteria apply.

11. Study Identifiers & Governance

Primary ID: 1064103917570427088

Registry Number: NCT06419634

Sponsor: Bristol Myers Squibb

Study Title: Study of BMS-986497 (ORM-6151) as a Monotherapy, in Double and Triple Combination With Azacitidine and Venetoclax in Participants With Relapsed or Refractory Acute Myeloid Leukemia or Myelodysplastic Syndrome

15. Sign-off & Approval
