

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A TWO-PART, PHASE 1A/B, OPEN-LABEL, MULTICENTER TRIAL EVALUATING PHARMACOKINETICS, SAFETY AND EFFICACY OF PF 07284890 (ARRY 461) IN PARTICIPANTS WITH BRAF V600 MUTANT SOLID TUMORS WITH AND WITHOUT BRAIN INVOLVEMENT
Short Title:	A FIH Study of PF-07284890 in Participants With BRAF V600 Mutant Solid Tumors With and Without Brain Involvement
Protocol Number:	1081891854705952644
NCT Number:	NCT04543188
Sponsor Name:	Pfizer
Investigational Product:	midazolam
Phase:	PHASE1
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Number of Participants With Dose Limiting Toxicities (DLTs): Phase 1a: DLT was defined as any adverse event (AE) or abnormal laboratory value which were related to study treatment and assessed as unrelated to disease (disease progression), occurring during the first 21 days of treatment that met at least 1 of the study specified criteria. DLTs were graded according to the National Cancer Institute- Common Terminology Criteria for Adverse Events (NCI-CTCAE), version (v) 5.0. 2. Number of Participants With Treatment Emergent Adverse Events (TEAEs), Serious TEAEs, Serious Treatment Related TEAEs, Grade 3 or 4 TEAEs and Grade 5 TEAEs by NCI CTCAE v5.0: Phase 1a: An adverse event (AE) was any untoward medical occurrence in participant/ clinical study participant temporally associated with use of study intervention, whether/ not considered related to study intervention. TEAEs were defined as any AE that occurs during on-treatment period. The on-treatment period was defined as period that starts with first dose of study treatment and ends at last dose of study treatment +30 days, or start of new anti-cancer therapy \[- 1 day\], whichever occurred first. Serious TEAEs were any untoward medical occurrence at any dose that: suspected to cause death; life-threatening; required hospitalization; persistent/significant disability/incapacity and might caused congenital anomaly/birth defect. Serious treatment related TEAEs were related to study treatment and relatedness was judged by investigator. TEAEs were graded according to NCI-CTCAE v 5.0 (grade 3= severe, grade 4= life-threatening and grade 5= death related to AE). AEs included SAEs and all non-SAE. 3. Number of Participants With Hematology Laboratory Abnormalities of Any CTCAE Grade: Phase 1a: The following hematology laboratory parameters were assessed: activated partial
--------------------	--

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

thromboplastin time prolonged, anemia, hemoglobin increased, international normalized ratio (INR) increased, leukocytosis, lymphocyte count decreased, lymphocyte count increased, neutrophil count decreased, platelet count decreased and white blood cell decreased. Laboratory abnormality events were graded according to NCI CTCAE v5.0; grade 1=mild, grade 2=moderate, grade 3=severe, grade 4=life-threatening consequences and grade 5=death. In this outcome measure, those number of participants are reported who had hematology laboratory abnormality in any parameter of any CTCAE Grades.

Secondary Obj.:

1. Maximum Observed Concentration (C_{max}) of PF-07284890 and Binimetinib for Single Dose: Phase 1a
2. Time for C_{max} (T_{max}) of PF-07284890 and Binimetinib for Single Dose: Phase 1a
3. Area Under the Plasma Concentration Time Curve From Time Zero to the Last Time Point of Quantifiable Concentration (AUC_{last}) of PF-07284890 and Binimetinib for Single Dose: Phase 1a

2.2 Background & Rationale

First-in-human study to assess safety, tolerability, PK, and preliminary activity of PF-07284890 as a single agent and in combination with binimetinib in participants with BRAF V600-mutated advanced solid tumor malignancies with and without brain involvement.

3. Study Design & Methodology

Design Framework: Type: INTERVENTIONAL, Phase: PHASE1, Status: TERMINATED

Target N: 65

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Age ≥16 years at the time of consent
- * Histologically confirmed diagnosis of advanced/metastatic solid tumor including primary brain tumor
- * Documented evidence of a BRAF V600 mutation in tumor tissue or blood
- * Confirmation of availability of adequate tumor tissue for submission to the sponsor/central laboratory
- * Presence or absence of brain involvement unless specified below
- * Dose Expansion (Part B)
 - * Cohort 1, 2, 3, 4: melanoma with at least 1 parenchymal brain lesion
 - * Cohort 1,3: asymptomatic in the brain for at least 14 days prior to start of study treatment
 - * Cohort 2,4: symptomatic in the brain within 14 days prior to the start of study treatment
 - * Cohort 5: any solid tumor that does not meet requirements for Cohorts 1-4, history of or current leptomeningeal metastases.
 - * Optional Cohort 6 (DDI Sub-study) and 7 (Food-Effect): if brain involvement present, must be asymptomatic
- * Disease progression despite prior treatment and no acceptable alternative treatment options available unless specified below

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

* Dose Expansion (Part B)

* Cohort 1, 2: No prior BRAF inhibitor in the metastatic setting or in the adjuvant setting within 6 months of study treatment

* Cohort 3, 4: Required prior BRAF inhibitor in the metastatic setting or in the adjuvant setting within 6 months of treatment

* Eastern Cooperative Oncology Group (ECOG) Performance Status of 0 or 1

4.2 Exclusion Criteria

* Brain metastasis/primary brain tumor requiring immediate local intervention

* History of or current leptomeningeal metastases

* Any other active malignancy within 2 years prior to enrollment

* Radiation therapy to visceral metastases within 14 days prior to study treatment. WBRT within 28 days prior to study treatment.

* Systemic anti-cancer therapy or small-molecular therapeutic(s) within 2 weeks prior to start of study treatment; Antibody based agents within 4 weeks prior to start of study treatment.

* History or current evidence of RVO or current risk factors for RVO; History of retinal degenerative disease

11. Study Identifiers & Governance

Primary ID: 1081891854705952644

Registry Number: NCT04543188

Sponsor: Pfizer

Study Title: A FIH Study of PF-07284890 in Participants With BRAF V600 Mutant Solid Tumors With and Without Brain Involvement
