

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 1, Multicenter, Open-label Study to Evaluate the Pharmacokinetics of CC-486 (Onureg®) in Subjects With Moderate or Severe Hepatic Impairment Compared With Normal Hepatic Function in Adult Subjects With Myeloid Malignancies
Short Title:	A Study to Evaluate CC-486/Onureg in Participants With Moderate or Severe Hepatic Impairment Compared With Normal Hepatic Function in Participants With Myeloid Malignancies
Protocol Number:	1147817936519647759
NCT Number:	NCT05209295
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	azacitidine
Phase:	PHASE1
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. AUC _{0-t} : Estimation of area under the plasma concentration-time curve (AUC) calculated from time zero to the last measured time point 2. AUC _{0-∞} : Estimation of AUC calculated from time zero to infinity 3. C _{max} : Observed maximum concentration
Secondary Obj.:	1. Incidence of adverse events 2. Incidence of serious adverse events 3. Number of participants with clinically significant changes in electrocardiogram parameters

2.2 Background & Rationale

The purpose of this study is to evaluate the effect of moderate or severe liver impairment on the drug levels of oral azacitidine and the safety and tolerability of oral azacitidine in participants with myeloid malignancies.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE1, Status: ACTIVE_NOT_RECRUITING
Target N:	32

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

* Documented diagnosis of Myelodysplastic syndrome, Acute myeloid leukemia, Non-acute promyelocytic leukemia, Chronic myelomonocytic leukemia, Philadelphia-negative myeloproliferative neoplasms, Myelodysplastic syndrome Myeloproliferative neoplasms overlap, Accelerated phase and blast phase Myeloproliferative neoplasms, Blastic plasmacytoid dendritic cell neoplasm according to the World Health Organization (WHO) 2016 classification

* Life expectancy of ≥ 3 months

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * Stable renal function without dialysis for at least 2 months prior to investigational product administration
- * Has moderate or severe hepatic impairment as defined by National Cancer Institute Organ Dysfunction Working Group criteria

4.2 Exclusion Criteria

- * Chemotherapy or radiotherapy within 2 weeks or 5 half-lives, whichever is longer, prior to the first day of investigational product administration
- * Persistent, clinically significant non-hematologic toxicities from prior therapies which have not recovered to $\leq$ Grade 2
- * Any condition including the presence of laboratory abnormalities, which places the participant at unacceptable risk if he/she were to participate in the study
- * History of inflammatory bowel disease, celiac disease, prior gastrectomy, gastric bypass, upper bowel removal, or any other gastrointestinal disorder or defect that would interfere with the absorption of the investigational product and/or predispose the participant to an increased risk of gastrointestinal toxicity

Other protocol-defined inclusion/exclusion criteria apply

11. Study Identifiers & Governance

Primary ID:	1147817936519647759
Registry Number:	NCT05209295
Sponsor:	Bristol Myers Squibb
Study Title:	A Study to Evaluate CC-486/Onureg in Participants With Moderate or Severe Hepatic Impairment Compared With Normal Hepatic Function in Participants With Myeloid Malignancies

15. Sign-off & Approval

Principal Investigator: _____	Date: _____
Clinical Operations Lead: _____	Date: _____
Lead Statistician: _____	Date: _____
