

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	Retrospective Study for Describing Real-World Effectiveness of Nivolumab + Chemotherapy in Neoadjuvant NSCLC in Argentina
Short Title:	A Study Describing Real-World Effectiveness of Nivolumab + Chemotherapy in Neoadjuvant NSCLC
Protocol Number:	266013830282742088
NCT Number:	NCT07141563
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	nivolumab
Phase:	Not Applicable
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Rate of pathological complete response (pCR) post-surgery: Number of patients with complete pathological response (defined as absence of residual viable tumor in both lung and lymph nodes at surgery) divided by total number of patients.
Secondary Obj.:	1. Event-free survival (EFS) 2. Rate of major pathological response (MPR) post-surgery 3. Participant demographics

2.2 Background & Rationale

The purpose of this study is to evaluate the real-world effectiveness and safety of neoadjuvant nivolumab combined with chemotherapy in Argentinian patients with resectable non-small cell lung cancer (NSCLC)

3. Study Design & Methodology

Design Framework:	Type: OBSERVATIONAL, Status: ENROLLING_BY_INVITATION
Target N:	80

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Participants aged 18 years or older
- * Participants diagnosed with resectable non-small cell lung cancer (NSCLC) (stage IIA-IIIB TNM AJCC 8ed) according to the treating team's judgment
- * Participants who received nivolumab and chemotherapy as neoadjuvant therapy between 1st July 2022 and 1st March 2025
- * Participants must have given informed consent for their data to be used for research or academic studies, or a waiver of consent has been obtained

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

4.2 Exclusion Criteria

- * Participants with confirmed positive EGFR gene mutation or ALK fusion gene, as the study focuses on the effectiveness of nivolumab in patients without these driver mutations
- * Prior malignancy active within the previous 3 years except for locally curable cancers that have been apparently cured, such as basal or squamous cell skin cancer, superficial bladder cancer, or carcinoma in situ of the prostate, cervix, or breast
- * Participants who received any antineoplastic therapy within 3 months prior to initiating neoadjuvant nivolumab and chemotherapy, to avoid confounding effects from prior treatments
- * Participants who participated in a clinical trial for NSCLC, to ensure the study reflects real-world clinical practice
- * Participants with complications of treatment-related adverse events related to hematotoxicity of antineoplastic agents 3 months prior to the start of neoadjuvant therapy, to minimize risks and confounding factors
- * Participants who started neoadjuvant therapy outside the participating medical institution and were transferred to the institution for surgery, to ensure data consistency and reliability

11. Study Identifiers & Governance

Primary ID: 266013830282742088

Registry Number: NCT07141563

Sponsor: Bristol Myers Squibb

Study Title: A Study Describing Real-World Effectiveness of Nivolumab + Chemotherapy in Neoadjuvant NSCLC

15. Sign-off & Approval

Principal Investigator: _____ Date: _____

Clinical Operations Lead: _____ Date: _____

Lead Statistician: _____ Date: _____
