

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Double-Blind, Placebo-Controlled and Active-controlled Trial to Evaluate the Effect of a Supratherapeutic Dose of MK-8527 on the QTc Interval in Healthy Adult Participants
Short Title:	A Clinical Study of MK-8527 in Healthy Adult Participants (MK-8527-014)
Protocol Number:	892558012648913335
NCT Number:	NCT07063238
Sponsor Name:	Merck
Investigational Product:	moxifloxacin
Phase:	PHASE1
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Change from Baseline in QT interval corrected for heart rate (QTc) following MK-8527 administration: Change from Baseline in QTc following MK-8527 administration will be reported.
Secondary Obj.:	1. Number of participants who experience one or more adverse events (AEs) 2. Number of participants who discontinue study intervention due to an AE 3. Change from Baseline in QTc following moxifloxacin administration

2.2 Background & Rationale

Researchers are looking for new medicines to prevent Human Immunodeficiency Virus Type 1 (HIV-1) infection. HIV-1 is the most common type of HIV, which is a virus that attacks cells of the immune system. Medicines to prevent HIV-1 infection are called pre-exposure prophylaxis (PrEP). Some people may have trouble following a PrEP plan because it involves either taking medicine everyday by mouth or getting injections (shots) often.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE1, Status: ACTIVE_NOT_RECRUITING
Target N:	42

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

The main inclusion criteria include but are not limited to the following:

- * Is in good health before randomization
- * Has body mass index (BMI) between 18 and 32 kg/m², inclusive

4.2 Exclusion Criteria

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

The main exclusion criteria include but are not limited to the following:

- * Has history of clinically significant endocrine, gastrointestinal (GI), cardiovascular, hematological, hepatic, immunological, renal, respiratory, genitourinary, or major neurological abnormalities or diseases.
- * Has history of cancer (malignancy).
- * Has positive test(s) for Hepatitis B surface antigen (HBsAg), hepatitis C antibodies or human immunodeficiency virus (HIV).

11. Study Identifiers & Governance

Primary ID: 892558012648913335
Registry Number: NCT07063238
Sponsor: Merck
Study Title: A Clinical Study of MK-8527 in Healthy Adult Participants (MK-8527-014)

15. Sign-off & Approval

Principal Investigator: _____ Date: _____
Clinical Operations Lead: _____ Date: _____
Lead Statistician: _____ Date: _____
