

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	Post-marketing Phase IV, Multicenter, Prospective Study to Observe the Safety and Tolerability of Breztri aerosphere™ Containing a Fixed Dose Combination of Budesonide 160 mcg/ Glycopyrronium 7.2 mcg/ Formoterol Fumarate Dehydrate 5 mcg in Patients With Moderate to Severe Chronic Obstructive Pulmonary Disease
Short Title:	Post-marketing Phase 4 Safety & Tolerability Study of Breztri aerosphere™ in Indian Patients With Chronic Obstructive Pulmonary Disease
Protocol Number:	330570682476924718
NCT Number:	NCT06531798
Sponsor Name:	AstraZeneca
Investigational Product:	glycopyrronium
Phase:	PHASE4
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. To observe the safety and tolerability of Breztri aerosphere™ as maintenance treatment in Indian patients with moderate to severe COPD: Percentage, nature, intensity, seriousness and causal relationship of AEs, SAEs, and AEs leading to discontinuation of study drug will be assessed
Secondary Obj.:	Not Provided

2.2 Background & Rationale

The purpose of this study is to observe the safety and tolerability of Breztri aerosphere™ as maintenance treatment in Indian patients with moderate to severe COPD.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE4, Status: NOT_YET_RECRUITING
Target N:	150

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Patients with a physician-confirmed diagnosis of COPD

* With a history of one severe COPD exacerbation or two or more moderate COPD exacerbations in the preceding 12 months.

* Post-bronchodilator FEV1 should be between $\geq 30\%$ to $< 80\%$ of the predicted normal.

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * Both male and female patients are allowed in the study
- * Female of Non-childbearing potential (i.e., physiologically incapable of becoming pregnant, including any female who is 2 years post-menopausal)
- * A urine pregnancy test must be negative at screening.
- * female participant must follow effective contraceptive method as outlined in protocol
- * Patients should be capable of giving signed informed consent

4.2 Exclusion Criteria

- * Significant diseases or conditions other than COPD, which, in the opinion of the Investigator, may put the subject at risk because of participation in the study or may influence either the results of the study or the subject's ability to participate in the study.
- * Chest x-ray within 6 months before screening must be acceptable to the investigator. Subjects who have a chest x-ray that reveals clinically significant abnormalities not believed to be due to the presence of COPD should not be included. A chest x-ray must be conducted if the most recent chest x-ray is not available at the time of screening.
- * Patients having moderate to severe exacerbations within 6 weeks before the Screening period.
- * Female patients who are pregnant or lactating or planning a family during the study period.
- * Patients with either a history of hypersensitivity to excipients of the study drug or drugs with a similar chemical structure or class to the study drug.
- * Patients participating in any current or future interventional trial during the study will not be enrolled in the current study.

11. Study Identifiers & Governance

Primary ID:	330570682476924718
Registry Number:	NCT06531798
Sponsor:	AstraZeneca
Study Title:	Post-marketing Phase 4 Safety & Tolerability Study of Breztri aerosphere™ in Indian Patients With Chronic Obstructive Pulmonary Disease

15. Sign-off & Approval
