

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A 12-month, Open-label, Prospective, Multicenter, Interventional, Single-arm Study Assessing the Efficacy and Safety of Ofatumumab 20 mg Subcutaneous (s.c.) Injection in Relapsing Multiple Sclerosis (RMS) Patients in China
Short Title:	Study of Efficacy and Safety of Ofatumumab in Relapsing Multiple Sclerosis (RMS) Patients in China
Protocol Number:	690789938470044872
NCT Number:	NCT05199571
Sponsor Name:	Novartis
Investigational Product:	ofatumumab
Phase:	PHASE4
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective: 1. Adjusted Annualized Relapse Rate (ARR) Based on Confirmed Relapses: A confirmed MS relapse is defined as one accompanied by a clinically-relevant change in the EDSS performed by the Independent EDSS rater, i.e. an increase of at least 0.5 points on the EDSS score, or an increase of 1 point on two functional scores or 2 points on one functional score (excluding changes involving bowel/bladder or cerebral functional system).

Adjusted ARR was obtained from fitting a negative binomial regression model adjusted for number of relapses in the previous year, baseline number of T1 Gd-enhancing lesions and baseline age as continuous covariates (offset: Natural log of time in study in years).

Secondary Obj.: 1. Number of Adverse Events and Serious Adverse Events 2. Number of Gadolinium (Gd)-Enhancing T1 Lesions Per MRI Scan 3. Annualized Rate of New or Enlarging T2 Lesions

2.2 Background & Rationale

The purpose of this study was to evaluate the efficacy and safety of ofatumumab s.c. in adult participants with relapsing multiple sclerosis (RMS) in China.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE4, Status: COMPLETED
Target N:	99

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Male or female Chinese aged 18-55 years (inclusive) at their enrollment of the study (signing the study consent form).
- * Clinical definite diagnosis of RMS according to the 2017 Revised McDonald criteria (Thompson et al 2018, and the documentation prior to their enrollment to the study (signing the study consent form) of:
 - * Two documented relapses during the past 2 years, or
 - * One documented relapse during the last year, or
 - * A positive Gd-enhancing MRI scan during the year prior to Screening. Note: Screening MRI scan may be used if no positive Gd-enhancing scan exists from prior year.
- * Disability status with an EDSS score of 0 - 5.5 (inclusive) at Screening.
- * Neurologically stable within 1 month prior to both Screening and Baseline (including no MS relapse in this period).

4.2 Exclusion Criteria

- * Participants with primary progressive MS (PPMS) or secondary progressive MS (SPMS) without disease activity
- * Participants meeting criteria for neuromyelitis optica spectrum disorder (NMOSD)
- * Pregnant or nursing (lactating) women
- * Women of child-bearing potential unless using effective methods of contraception while taking study treatment and for at least 6 months after stopping medication
- * Participants with an active chronic disease of the immune system other than MS
- * Participants with neurological findings consistent with PML or confirmed PML
- * Participants with active hepatitis B disease
- * Participants with active systemic infections (including but not limited to active COVID-19 infection) or known to have AIDS or to test positive for HIV antibody at Screening
- * Participants at high risk of developing or having reactivation of syphilis or tuberculosis
- * Have received any live or live-attenuated vaccines within four weeks prior to first study drug administration
- * Have been treated with medications as specified or within timeframes specified in the protocol
- * Any other disease or condition that could interfere with participation in the study according to the study protocol, or with the ability of the participants to cooperate and comply with the study procedures.

11. Study Identifiers & Governance

Primary ID:	690789938470044872
Registry Number:	NCT05199571
Sponsor:	Novartis
Study Title:	Study of Efficacy and Safety of Ofatumumab in Relapsing Multiple Sclerosis (RMS) Patients in China

15. Sign-off & Approval
