

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase III, Open-Label, Randomized Study of On-Demand TACE Combined With Atezolizumab Plus Bevacizumab (Atezo/Bev) or On-Demand TACE Alone in Patients With Untreated Hepatocellular Carcinoma
Short Title:	A Study of TACE Combined With Atezolizumab Plus Bevacizumab or TACE Alone in Patients With Untreated Hepatocellular Carcinoma
Protocol Number:	1005160732689635223
NCT Number:	NCT04712643
Sponsor Name:	Roche
Investigational Product:	atezolizumab
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. TACE Progression-Free Survival (TACE PFS) as Determined by Investigator: TACE PFS is defined as the time from randomization to untreatable progression or TACE failure/refractoriness or any cause of death, whichever occurs first, as determined by the investigator (INV). 2. Overall Survival (OS): Overall survival (OS) after enrollment is defined as the time from randomization to death from any cause.
Secondary Obj.:	1. Time to Untreatable (unTACEable) Progression (TTUP) as Determined by Investigator 2. Time to Progression (TTP) as Determined by Investigator 3. Time to Extrahepatic Spread (EHS) as Determined by Investigator

2.2 Background & Rationale

This study will evaluate the efficacy and safety of atezolizumab plus bevacizumab combined with on-demand TACE compared to on-demand TACE alone in participants with hepatocellular carcinoma who are at high risk of poorer outcome following TACE treatment.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: ACTIVE_NOT_RECRUITING
Target N:	342

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Confirmed diagnosis of HCC by histology/ cytology or clinical criteria
- * Eligible for TACE treatment

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * No prior systemic therapy for HCC, especially immunotherapy
- * No prior locoregional therapy to the target lesion(s)
- * At least one measurable untreated lesion
- * ECOG Performance Status of 0-1
- * Child-Pugh class A

4.2 Exclusion Criteria

- * Evidence of Vp3/4 and hepatic vein tumor thrombus (HVTT)
- * Evidence of extrahepatic spread (EHS)
- * Being a candidate for curative treatments
- * Any condition representing a contraindication to TACE as determined by the investigators
- * Active or history of autoimmune disease or immune deficiency
- * Untreated or incompletely treated esophageal and/or gastric varices with bleeding or high risk for bleeding
- * A prior bleeding event due to esophageal and/or gastric varices within 6 months prior to initiation of study treatment
- * Evidence of bleeding diathesis or significant coagulopathy

11. Study Identifiers & Governance

Primary ID: 1005160732689635223

Registry Number: NCT04712643

Sponsor: Roche

Study Title: A Study of TACE Combined With Atezolizumab Plus Bevacizumab or TACE Alone in Patients With Untreated Hepatocellular Carcinoma

15. Sign-off & Approval
