

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase III, Randomized, Double-blind Study of Ianalumab (VAY736) Versus Placebo in Addition to First-line Corticosteroids in Primary Immune Thrombocytopenia (VAYHIT1)
Short Title:	Study of Ianalumab Versus Placebo in Addition to First-line Corticosteroids in Primary Immune Thrombocytopenia (ITP)
Protocol Number:	13175185292206996
NCT Number:	NCT05653349
Sponsor Name:	Novartis
Investigational Product:	combinations of corticosteroids
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Time from randomization to treatment failure (TTF): Time from randomization until platelet count below 30 G/L, need for a rescue treatment or start of a second-line therapy or death.
Secondary Obj.:	1. Complete Response (CR) rate in each treatment group 2. Response (R) rate in each treatment group 3. Time to complete response in each treatment group

2.2 Background & Rationale

The purpose of this study is to evaluate the effect of two different doses of Ianalumab versus placebo in addition to first-line corticosteroids in maintaining platelet count ≥ 30 G/L in adult participants with primary ITP.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: ACTIVE_NOT_RECRUITING
Target N:	226

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Signed informed consent prior to participation in the study.
- * Male or female participants aged 18 years and older on the day of signing informed consent
- * Primary ITP diagnosed within 3 months before initiating first-line ITP therapy (corticosteroids, IVIG)
- * Platelet count below 30 G/L before starting any first-line ITP therapy (corticosteroids, IVIG)
- * Response (platelet count ≥ 50 G/L) to corticosteroids (+/- IVIG) at any time prior to randomization. Note: Platelet count measured within 7 days of platelet transfusion will not be considered as response.

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

Key Exclusion Criteria:

- * Evans syndrome or any other cytopenia (patients with low grade anemia related to bleeding or iron deficiency are eligible)
- * Current life-threatening bleeding
- * Previous ITP treatment, including splenectomy, except for corticosteroids and/or IVIG initiated as first-line therapy for up to 28 days before randomization and rescue corticosteroids and/or IVIG given prior to confirmed diagnosis of primary ITP .
- * Prior use of B-cell depleting therapy (e.g., rituximab).
- * Absolute neutrophil count below 1.0 G/L at randomization
- * Participants with concurrent coagulation disorders and/or receiving anti-platelet or anticoagulant medication with an exemption of low dose of acetylsalicylic acid

Other protocol-defined Inclusion/Exclusion may apply.

4.2 Exclusion Criteria

- * Evans syndrome or any other cytopenia (patients with low grade anemia related to bleeding or iron deficiency are eligible)
- * Current life-threatening bleeding
- * Previous ITP treatment, including splenectomy, except for corticosteroids and/or IVIG initiated as first-line therapy for up to 28 days before randomization and rescue corticosteroids and/or IVIG given prior to confirmed diagnosis of primary ITP .
- * Prior use of B-cell depleting therapy (e.g., rituximab).
- * Absolute neutrophil count below 1.0 G/L at randomization
- * Participants with concurrent coagulation disorders and/or receiving anti-platelet or anticoagulant medication with an exemption of low dose of acetylsalicylic acid

Other protocol-defined Inclusion/Exclusion may apply.

11. Study Identifiers & Governance

Primary ID:	13175185292206996
Registry Number:	NCT05653349
Sponsor:	Novartis
Study Title:	Study of Ianalumab Versus Placebo in Addition to First-line Corticosteroids in Primary Immune Thrombocytopenia (ITP)

15. Sign-off & Approval
