

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase III, Multicenter, Open-Label, Uncontrolled Study To Evaluate Pharmacokinetics, Efficacy, Safety, Tolerability, And Pharmacodynamics Of Satralizumab In Pediatric Patients With AQP4 Antibody Positive Neuromyelitis Optica Spectrum Disorder (NMOSD)
Short Title:	A Study To Evaluate Pharmacokinetics, Efficacy, Safety, Tolerability, And Pharmacodynamics Of Satralizumab In Pediatric Patients With Aquaporin-4 Antibody Positive Neuromyelitis Optica Spectrum Disorder (NMOSD)
Protocol Number:	195758279503809597
NCT Number:	NCT05199688
Sponsor Name:	Roche
Investigational Product:	satralizumab
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Summary of observed serum concentration [C _{through}] of satralizumab 2. Apparent clearance [CL/F] of satralizumab 3. Apparent volume of distribution [V/F] of satralizumab
Secondary Obj.:	1. Proportion of relapse-free patients by Week 48 2. Annualized relapse rate (ARR), defined as the average number of relapses for each year of the study 3. Time to first relapse (TFR) after randomization, defined as the time from randomization until the first occurrence of relapse, as determined by the investigator

2.2 Background & Rationale

This study will primarily evaluate the pharmacokinetics of satralizumab in pediatric patients aged 2-11 years with anti-aquaporin-4 (AQP4) antibody seropositive neuromyelitis optica spectrum disorder (NMOSD). Efficacy, safety, tolerability, and pharmacodynamics will be evaluated in a descriptive manner, given the small number of patients who will be enrolled in this study.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: RECRUITING
Target N:	8

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

* Age at screening 2-11 years, inclusive

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * Body weight at screening ≥ 10 kg
- * For female patients of childbearing potential (postmenarchal): agreement to either remain completely abstinent (refrain from heterosexual intercourse) or to use a reliable means of contraception
- * Diagnosed as having NMOSD with AQP4 antibody seropositive status as defined by the Wingerchuk 2015 criteria
Clinical evidence of at least one documented attack (including first attack) in the last year prior to screening
- * Neurological stability for ≥ 30 days prior to both screening and baseline
- * Expanded Disability Status Scale (EDSS) 0 to 6.5
- * For patients receiving a baseline immunosuppressant treatment and planning to continue on these therapies, treatment must be at stable dose for 4 weeks prior to baseline

4.2 Exclusion Criteria

- * Pregnancy or lactation
- * Evidence of other demyelinating disease mimicking NMOSD
- * Active or presence of recurrent bacterial, viral, fungal, mycobacterial infection, or other infection at baseline
- * Evidence of chronic active hepatitis B or C
- * Evidence of untreated latent or active tuberculosis (TB)
- * Receipt of a live or live-attenuated vaccine within 6 weeks prior to baseline
- * History of severe allergic reaction to a biologic agent

11. Study Identifiers & Governance

Primary ID: 195758279503809597

Registry Number: NCT05199688

Sponsor: Roche

Study Title: A Study To Evaluate Pharmacokinetics, Efficacy, Safety, Tolerability, And Pharmacodynamics Of Satralizumab In Pediatric Patients With Aquaporin-4 Antibody Positive Neuromyelitis Optica Spectrum Disorder (NMOSD)

15. Sign-off & Approval

Principal Investigator: _____ Date: _____

Clinical Operations Lead: _____ Date: _____
