

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 4 Study of Nivolumab in Combination With Ipilimumab in Patients With Previously Untreated Advanced Renal Cell Carcinoma and Intermediate-or Poor-risk Factors Conducted in India
Short Title:	A Study to Evaluate the Safety and Efficacy of Nivolumab With Ipilimumab in Participants With Untreated Advanced Kidney Cancer Conducted in India
Protocol Number:	448072428764214040
NCT Number:	NCT04513522
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	ipilimumab
Phase:	PHASE4
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective: 1. Total Number of Participants Experiencing High Grade Immune-Mediated Adverse Events (IMAE): IMAEs are a type of adverse event that occurs when the immune system reacts against the body's own tissues, including diarrhea/colitis, hepatitis, pneumonitis, nephritis and renal dysfunction, rash, and endocrine (adrenal insufficiency, hypophysitis, hypothyroidism/thyroiditis, hyperthyroidism, and diabetes mellitus). IMAE analyses includes events, regardless of causality, which occurred during the study and follow-up. Only participants who received immune-modulating medication for treatment of the event are reported, with the exception of endocrine events, which will be included regardless of treatment since these events are often managed without immunosuppression.

High grade (Grade 3 to 4 and Grade 5) IMAEs are reported. IMAEs are graded on a scale from 1 to 5, in which Grade 3 is severe or medically significant but not immediately life-threatening; Grade 4 events may require hospitalization; Grade 5 events are fatal.

Secondary Obj.: 1. Time to Onset of High Grade Immune-Mediated Adverse Event (IMAE) 2. Time to Resolution of High Grade Immune-Mediated Adverse Event (IMAE) 3. The Number of Participants Who Received Immune-Modulating Medication

2.2 Background & Rationale

The purpose of this study is to assess the safety and efficacy of nivolumab combined with ipilimumab in intermediate and poor-risk participants with previously untreated advanced renal cell carcinoma (RCC) or metastatic RCC (mRCC) in India.

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

3. Study Design & Methodology

Design Framework: Type: INTERVENTIONAL, Phase: PHASE4, Status: COMPLETED

Target N: 101

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Histological confirmation of renal cell carcinoma (RCC) with clear cell component including participants who may have sarcomatoid features
- * Qualifies as intermediate or poor risk by meeting at least one of the prognostic factors as per the International Metastatic RCC Database Consortium (IMDC) criteria
- * Indian participants with Indian ethnicity living in India
- * No prior systemic therapy for RCC
- * Measurable disease lesion by computed tomography (CT) or magnetic resonance imaging (MRI) per Response Evaluation Criteria in Solid Tumors (RECIST) 1.1 criteria

4.2 Exclusion Criteria

- * Participants with active, untreated, symptomatic central nervous system (CNS) metastases
- * Major surgery less than 28 days prior to the first dose of study treatment
- * Participants with an autoimmune disease, or any other condition, requiring systemic treatment with either corticosteroids or other immunosuppressive medications

Other protocol-defined inclusion/exclusion criteria apply

11. Study Identifiers & Governance

Primary ID: 448072428764214040

Registry Number: NCT04513522

Sponsor: Bristol Myers Squibb

Study Title: A Study to Evaluate the Safety and Efficacy of Nivolumab With Ipilimumab in Participants With Untreated Advanced Kidney Cancer Conducted in India

15. Sign-off & Approval

Principal Investigator: _____ Date: _____
