

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Single Arm, Open Label Study to Assess the Efficacy, Safety and Tolerability of Once-monthly Administration of Subcutaneous C.E.R.A. for the Treatment of Chronic Renal Anaemia in Pre-dialysis Patients Not Currently Treated With ESA.
Short Title:	A Study of Monthly Subcutaneous Mircera for the Treatment of Chronic Renal Anemia in Predialysis Patients Not Treated With ESA.
Protocol Number:	505575565193260733
NCT Number:	NCT00661388
Sponsor Name:	Roche
Investigational Product:	methoxy polyethylene glycol-epoetin beta
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Mean Change in Hb Concentration Between Baseline and the Efficacy Evaluation Period: Mean change in Hb concentration was calculated as the difference between the time adjusted average of Hb during the efficacy evaluation period (EEP \[Week 29 to Week 36\]), and the Hb at Baseline (Week 0). A positive change from baseline indicates improvement.
Secondary Obj.:	1. Mean Time to Achievement of Response During the EEP 2. The Percentage of Participants Whose Hb Concentrations Remained Within the Target Range of 10.0- 12.0 g/dL Throughout the EEP 3. Mean Time Spent by Participants in the Target Range of 10.0- 12.0 g/dL During the EEP

2.2 Background & Rationale

This single arm study will assess the efficacy and safety of subcutaneous methoxy polyethylene glycol-epoetin beta (Mircera) for the correction and maintenance of hemoglobin levels in predialysis patients with renal anemia who are not currently treated with erythropoietin stimulating agents (ESA). Eligible patients will receive monthly subcutaneous injections of Mircera at an initial recommended dose of 1.2 micrograms/kg. The anticipated time on study treatment is 3-12 months, and the target sample size is 100-500 individuals.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: COMPLETED
Target N:	75

4. Subject Selection (Eligibility Criteria)

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

4.1 Inclusion Criteria

- * adult patients, ≥ 18 years of age;
- * chronic renal anemia;
- * predialysis stage;
- * no ESA therapy during previous 3 months.

4.2 Exclusion Criteria

- * transfusion of red blood cells during previous 2 months;
- * poorly controlled hypertension requiring hospitalization in previous 6 months;
- * significant acute or chronic bleeding.

11. Study Identifiers & Governance

Primary ID:	505575565193260733
Registry Number:	NCT00661388
Sponsor:	Roche
Study Title:	A Study of Monthly Subcutaneous Mircera for the Treatment of Chronic Renal Anemia in Predialysis Patients Not Treated With ESA.

15. Sign-off & Approval

Principal Investigator: _____ Date: _____
Clinical Operations Lead: _____ Date: _____
