

# Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

## 1. Administrative & Study Identification

|                          |                                                                                                                                                                                                                                                                                           |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Full Study Title:        | A Phase III Multi-center, Randomized, Open-label Trial to Evaluate Efficacy and Safety of Ribociclib With Endocrine Therapy as an Adjuvant Treatment in Patients With Hormone Receptor-positive, HER2-negative Early Breast Cancer (New Adjuvant Trial With Ribociclib [LEE011]: NATALEE) |
| Short Title:             | A Trial to Evaluate Efficacy and Safety of Ribociclib With Endocrine Therapy as Adjuvant Treatment in Patients With HR+/HER2- Early Breast Cancer                                                                                                                                         |
| Protocol Number:         | 662779187042283955                                                                                                                                                                                                                                                                        |
| NCT Number:              | NCT03701334                                                                                                                                                                                                                                                                               |
| Sponsor Name:            | Novartis                                                                                                                                                                                                                                                                                  |
| Investigational Product: | ribociclib                                                                                                                                                                                                                                                                                |
| Phase:                   | PHASE3                                                                                                                                                                                                                                                                                    |
| Medical Monitor:         | [Not Provided in Posting]                                                                                                                                                                                                                                                                 |

## 2. Study Synopsis & Rationale

### 2.1 Study Objective

|                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Primary Objective: | 1. Invasive Disease-Free Survival (iDFS): iDFS using STEEP criteria (Standardized Definitions for Efficacy End Points in Adjuvant Breast Cancer Trials), as assessed by Investigator. iDFS is defined as time from the date of randomization to the date of the first event of local invasive breast recurrence, regional invasive recurrence, distant recurrence, death (any cause), contralateral invasive BC, or second primary non-breast invasive cancer (excluding basal and squamous cell carcinomas of the skin). |
| Secondary Obj.:    | 1. Recurrence-free survival (RFS) 2. Distant disease-free survival (DDFS) 3. Overall Survival (OS)                                                                                                                                                                                                                                                                                                                                                                                                                        |

### 2.2 Background & Rationale

A phase III multi-center, randomized, open-label trial to evaluate efficacy and safety of ribociclib with endocrine therapy as adjuvant treatment in patients with HR+/HER2- Early Breast Cancer (EBC)

## 3. Study Design & Methodology

|                   |                                                                    |
|-------------------|--------------------------------------------------------------------|
| Design Framework: | Type: INTERVENTIONAL, Phase: PHASE3, Status: ACTIVE_NOT_RECRUITING |
| Target N:         | 5101                                                               |

## 4. Subject Selection (Eligibility Criteria)

### 4.1 Inclusion Criteria

- \* Patient is ≥ 18 years-old at the time of PICF signature
- \* Patient is female with known menopausal status at the time of randomization or initiation of adjuvant ET (whichever

# Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

occurs earlier), or male.

- \* Patient with histologically confirmed unilateral primary invasive adenocarcinoma of the breast with a date of initial cytologic or histologic diagnosis within 18 months prior to randomization.
- \* Patient has breast cancer that is positive for ER and/or PgR
- \* Patient has HER2-negative breast cancer
- \* Patient has available archival tumor tissue from the surgical specimen
- \* Patient after surgical resection where tumor was removed completely, with the final surgical specimen microscopic margins free from tumor, and belongs to one of the following categories: anatomic stage group II or III
- \* If indicated, patient has completed adjuvant and/or neoadjuvant chemotherapy according to the institutional guidelines
- \* If indicated, patient has completed adjuvant radiotherapy according to the institutional guidelines
- \* Patient has an Eastern Cooperative Oncology Group (ECOG) Performance Status of 0 or 1.
- \* Patient has no contraindication for the adjuvant ET in the trial and is planned to be treated with ET for 5 years

## 4.2 Exclusion Criteria

- \* Patient has received any CDK4/6 inhibitor
- \* Patient has received prior treatment with tamoxifen, raloxifene or AIs for reduction in risk ("chemoprevention") of breast cancer and/or treatment for osteoporosis within the last 2 years prior to randomization. Patient is concurrently using hormone replacement therapy.
- \* Patient has received prior treatment with anthracyclines at cumulative doses of 450 mg/m<sup>2</sup> or more for doxorubicin, or 900 mg/m<sup>2</sup> or more for epirubicin.
- \* Patient with a known hypersensitivity to any of the excipients of ribociclib and/or ET
- \* Patient with distant metastases of breast cancer beyond regional lymph nodes (stage IV according to AJCC 8th edition) and/or evidence of recurrence after curative surgery.
- \* Patient is concurrently using other anti-neoplastic therapy with the exception of adjuvant ET
- \* Patient has had major surgery, chemotherapy or radiotherapy within 14 days prior to randomization
- \* Patient has not recovered from clinical and laboratory acute toxicities related to prior anti-cancer therapies
- \* Patient has a concurrent invasive malignancy or a prior invasive malignancy whose treatment was completed within 2 years before randomization
- \* Patient has known HIV infection, Hepatitis B or C infection
- \* Clinically significant, uncontrolled heart disease and/or cardiac repolarization abnormality
- \* Patient is currently receiving any of the following substances within 7 days before randomization - Concomitant medications, herbal supplements, and/or fruits that are known as strong inhibitors or inducers of CYP3A4/5 or Medications that have a narrow therapeutic window and are predominantly metabolized through CYP3A4/5
- \* is currently receiving or has received systemic corticosteroids ? 2 weeks prior to starting trial treatment
- \* Patient has impairment of GI function or GI disease that may significantly alter the absorption of the oral trial treatments
- \* Patient has any other concurrent severe and/or uncontrolled medical condition that would, in the Investigator's judgment, cause unacceptable safety risks, contraindicate patient participation in the clinical trial or compromise compliance with the protocol
- \* Participation in other studies involving investigational drug(s) within 30 days prior to randomization or within 5 half-lives of the investigational drug(s) (whichever is longer), or participation in any other type of medical research judged not to

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

be scientifically or medically compatible with this trial.

\* Pregnant or breast-feeding (lactating) women or women who plan to become pregnant or breast-feed during the trial

## 11. Study Identifiers & Governance

**Primary ID:** 662779187042283955

**Registry Number:** NCT03701334

**Sponsor:** Novartis

**Study Title:** A Trial to Evaluate Efficacy and Safety of Ribociclib With Endocrine Therapy as Adjuvant Treatment in Patients With HR+/HER2- Early Breast Cancer
