

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase I-III, Multicenter Study Evaluating the Efficacy and Safety of Multiple Therapies in Cohorts of Patients With Resectable Stage I-III Non-Small Cell Lung Cancer, Selected According to Biomarker Status
Short Title:	A Study to See How Well and How Safely Different Treatments Work in a Group of Participants With Non-Small Cell Lung Cancer (NSCLC)
Protocol Number:	686714250083806900
NCT Number:	NCT06624059
Sponsor Name:	Roche
Investigational Product:	cisplatin
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Cohort B1: Incidence, type, and severity of adverse events (AEs) with onset up to 28 days after the last dose of chemotherapy 2. Cohort B2: Investigator-assessed pathologic complete response (inv-pCR)
Secondary Obj.:	1. Cohort B1: Investigator-assessed disease-free survival (DFS) 2. Cohort B1: Overall survival (OS) 3. Cohort B1: Incidence, type, and severity of AEs with onset up to 28 days after the last dose of study treatment

2.2 Background & Rationale

The objective of this study is to evaluate the efficacy and/or safety of multiple therapies in patients with early-stage resectable NSCLC. Cohort B1 is a phase II cohort that will evaluate the safety, and efficacy of alectinib in combination with up to four cycles of platinum-based chemotherapy in the adjuvant setting post complete surgical resection. Cohort B2 is a phase II cohort that will evaluate the efficacy and safety of perioperative alectinib in combination with chemotherapy in the neoadjuvant setting.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: ACTIVE_NOT_RECRUITING
Target N:	11

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Not Provided

4.2 Exclusion Criteria
