

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Multicentre Randomized Double-Blind Placebo Controlled Phase 3 Study to Evaluate the Efficacy and Safety of Anifrolumab in Adult Patients With Active Proliferative Lupus Nephritis
Short Title:	Phase 3 Study of Anifrolumab in Adult Patients With Active Proliferative Lupus Nephritis
Protocol Number:	1134995191858373126
NCT Number:	NCT05138133
Sponsor Name:	AstraZeneca
Investigational Product:	anifrolumab
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Difference in proportion of participants with CRR (Complete Renal Response) in anifrolumab group compared with placebo group: CRR is defined as: * UPCR $\leq$ 0.5 mg/mg * eGFR $\geq$ 60 mL/min/1.73 m ² or no decrease from baseline of $\geq$ 20%
Secondary Obj.:	1. Difference in proportion of participants achieving sustained OCS reduction in anifrolumab group compared with placebo group. 2. Hazard Ratio (HR) of achieving sustained CRR in anifrolumab compared with placebo group 3. Difference in the mean standardized AUC for UPCR between anifrolumab and placebo participants

2.2 Background & Rationale

The purpose of this study is to evaluate the efficacy and safety of IV anifrolumab in adult patients with Active Proliferative Lupus Nephritis

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: RECRUITING
Target N:	360

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- Active proliferative LN Class III or IV either with or without the presence of Class V according to the 2003 ISN/RPS classification
- Renal biopsy obtained within 6 months prior to signing the ICF or during Screening Period.

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

3. Urine protein to creatinine ratio ≥ 1 mg/mg (113.17 mg/mmol)
4. eGFR ≥ 35 mL/min/1.73 m² (as calculated by the Chronic Kidney Disease Epidemiology Collaboration formula).
5. Fulfills updated 2019 EULAR/ACR SLE classification criteria.
6. No signs of symptoms of active TB prior to or during screening or no treatment for latent TB

4.2 Exclusion Criteria

1. A diagnosis of pure Class V LN based on the renal biopsy obtained within 6 months prior to signing the ICF or during Screening.
2. Known history of a primary immunodeficiency, splenectomy, or any underlying condition that predisposes the participant to infection, or a positive result for HIV confirmed by the central lab at Screening - an HIV test must be performed during Screening, and the result should be available prior to Week 0 (Day 1).
3. Evidence of hepatitis C or active hepatitis B.
4. Any history of cancer except successfully cured skin squamous or basal skin carcinoma and cervical cancer in situ.
5. Receipt of the following for the current LN flare (ie, since the qualifying renal biopsy): IV cyclophosphamide ≥ 2 pulses of high-dose (≥ 0.5 g/m²) or ≥ 4 doses of low dose (500 mg every 2 weeks) or Average MMF ≥ 2.5 g/day (or ≥ 1800 mg/day of enteric coated mycophenolate sodium) for more than 8 weeks or Tacrolimus ≥ 4 mg/day for more than 8 weeks; Cyclosporine for more than 8 weeks or during last 8 weeks prior to signing the ICF; Voclosporin for more than 8 weeks or during last 8 weeks prior to signing the ICF; Belimumab for more than 12 weeks or during last 12 weeks prior to signing the ICF.
6. Previous receipt of ≥ 2 investigation treatments (other than anifrolumab) for LN or SLE since time of diagnosis and through the ICF.
7. Known intolerance to ≥ 1.0 g/day of MMF.
8. Any history of severe COVID-19 infection.

11. Study Identifiers & Governance

Primary ID:	1134995191858373126
Registry Number:	NCT05138133
Sponsor:	AstraZeneca
Study Title:	Phase 3 Study of Anifrolumab in Adult Patients With Active Proliferative Lupus Nephritis

15. Sign-off & Approval
