2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Pathological Complete Response (pCR) rate, in all randomized participants: Arm B vs. Arm A 2. Event-Free Survival (EFS), in all randomized participants: Arm B vs. Arm A
Secondary Obj.:	1. Overall Survival (OS) in all randomized participants 2. Incidence of Adverse Events (AE) in participants who received at least one treatment dose 3. Incidence of Serious Adverse Events (SAE) in participants who received at least one treatment dose

2.2 Background & Rationale

The purpose of this study is to compare nivolumab plus neoadjuvant gemcitabine/cisplatin (GC) chemotherapy, followed by post-surgery continuation of immuno-oncology (IO) therapy, with neoadjuvant GC chemotherapy alone in adult participants with previously untreated muscle-invasive bladder cancer (MIBC).

3. Study Design & Methodology

Target N:	855

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

* Participant must be deemed eligible for Radical Cystectomy (RC) by his/her oncologist and/or urologist, and must agree to undergo Radical Cystectomy (RC) after completion of neoadjuvant therapy.
