

# Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

## 1. Administrative & Study Identification

|                          |                                                                                                                                                                                                                                                                                                                                                                             |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Full Study Title:        | A Prospective, Open-label, Multicenter, Randomized Study to Evaluate the Benefits and Risks of Conversion of Existing Adolescent Renal Allograft Recipients Aged 12 to Less Than 18 Years of Age to a Belatacept-based Immunosuppressive Regimen as Compared to Continuation of a Calcineurin Inhibitor-based Regimen, and Their Adherence to Immunosuppressive Medications |
| Short Title:             | A Study to Evaluate the Benefits and Risks of Conversion of Existing Adolescent Kidney Transplant Recipients Aged 12 to <18 Years to a Belatacept-based Immunosuppressive Regimen as Compared to Continuation of a Calcineurin Inhibitor-based Regimen, and Their Adherence to Immunosuppressive Medications                                                                |
| Protocol Number:         | 458611262807086306                                                                                                                                                                                                                                                                                                                                                          |
| NCT Number:              | NCT04877288                                                                                                                                                                                                                                                                                                                                                                 |
| Sponsor Name:            | Bristol Myers Squibb                                                                                                                                                                                                                                                                                                                                                        |
| Investigational Product: | phenol                                                                                                                                                                                                                                                                                                                                                                      |
| Phase:                   | PHASE3                                                                                                                                                                                                                                                                                                                                                                      |
| Medical Monitor:         | [Not Provided in Posting]                                                                                                                                                                                                                                                                                                                                                   |

## 2. Study Synopsis & Rationale

### 2.1 Study Objective

|                    |                                                                                                                                                                                                                                                                                     |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Primary Objective: | 1. Proportion of participants who survive with a functional graft with estimated glomerular filtration rate (eGFR) > 30 mL/min/1.73 m <sup>2</sup> (updated Schwartz formula) at 24 months post-randomization                                                                       |
| Secondary Obj.:    | 1. Participant and graft survival: Proportion of participants who survive with a functioning graft 2. Participant and graft survival: Proportion of participants who survive 3. Participant and graft survival: Proportion of participants who experience death-censored graft loss |

### 2.2 Background & Rationale

The purpose of this study is to evaluate the benefits and risks of conversion of existing adolescent kidney allograft recipients aged 12 to less than 18 years of age to a belatacept-based immunosuppressive regimen as compared to continuation of a calcineurin inhibitor-based regimen and their adherence to immunosuppressive medications.

## 3. Study Design & Methodology

|                   |                                                         |
|-------------------|---------------------------------------------------------|
| Design Framework: | Type: INTERVENTIONAL, Phase: PHASE3, Status: RECRUITING |
| Target N:         | 102                                                     |

## 4. Subject Selection (Eligibility Criteria)

# Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

## 4.1 Inclusion Criteria

- \* Male and female adolescents 12 to less than 18 years of age
- \* Recipients of a renal allograft from a living or deceased donor transplanted at least 6 calendar months prior to enrollment
- \* Receiving a stable regimen of a calcineurin inhibitor (CNI), with mycophenolate mofetil (MMF) or enteric-coated mycophenolate sodium/mycophenolate mofetil (EC-MPS/MPA), with or without daily corticosteroids for ? 30 days prior to randomization
- \* Clinically stable renal function during the 12-week period prior to screening, in the opinion of the investigator and based on protocol-defined criteria for proteinuria and estimated glomerular filtration rate (eGFR)
- \* Serologic evidence of past exposure to Epstein-Barr virus (EBV) and current absence of EBV DNA replication at or prior to renal transplantation and during the Screening period
- \* Completion of an initial course of SARS-CoV-2 vaccination per local standard of care, a minimum of 6 weeks prior to enrollment

## 4.2 Exclusion Criteria

- \* Recipients with EBV serostatus negative or unknown at screening or at transplant
- \* Treatment for biopsy-proven acute rejection (BPAR) of any degree of severity within 6 calendar months prior to enrollment
- \* Biopsy-confirmed antibody-mediated acute rejection at any time with the current allograft
- \* Banff 97 grade IIA or higher acute cellular rejection (or equivalent), or treatment with plasmapheresis or rituximab for any acute rejection at any time with the current allograft
- \* Current evidence or past history of active or inadequately treated latent tuberculosis (TB) infection
- \* Previously treated with belatacept or previously enrolled in a belatacept trial with their present allograft

Other inclusion/exclusion criteria apply

## 11. Study Identifiers & Governance

**Primary ID:** 458611262807086306

**Registry Number:** NCT04877288

**Sponsor:** Bristol Myers Squibb

**Study Title:** A Study to Evaluate the Benefits and Risks of Conversion of Existing Adolescent Kidney Transplant Recipients Aged 12 to <18 Years to a Belatacept-based Immunosuppressive Regimen as Compared to Continuation of a Calcineurin Inhibitor-based Regimen, and Their Adherence to Immunosuppressive Medications

## 15. Sign-off & Approval

Principal Investigator: \_\_\_\_\_ Date: \_\_\_\_\_
