

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 3b/4 Multi-center, Randomized, Open-label, Long-term Safety Study of Deucravacitinib in Comparison to Ustekinumab in Participants With Moderate-to-Severe Plaque Psoriasis
Short Title:	Long-Term Safety Study of Deucravacitinib Versus Ustekinumab in Participants With Psoriasis (PRAGMATYK)
Protocol Number:	536837331388002292
NCT Number:	NCT07116967
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	ustekinumab
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Composite cardiovascular adjudicated 3-point major adverse cardiovascular event (MACE) plus coronary revascularization: MACE defined as non-fatal myocardial infarction \[MI\], nonfatal stroke, and cardiovascular death
Secondary Obj.:	1. Number of participants with non-fatal MI 2. Number of participants with non-fatal stroke 3. Death due to cardiovascular events

2.2 Background & Rationale

A study to evaluate the long-term safety of Deucravacitinib versus Ustekinumab in participants with psoriasis

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: RECRUITING
Target N:	3040

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

* Participants with moderate-to-severe plaque psoriasis:

1. Deemed by the Investigator to be a candidate for phototherapy or systemic treatment for psoriasis, including ustekinumab;

2. Have at least 1 of the following cardiovascular risk factors:

* Current cigarette smoker

* Diagnosis of hypertension

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * Diagnosis of hyperlipidemia
- * Diabetes mellitus type 1 or 2
- * History of one or more of the following cardiovascular events: Coronary intervention (PCI) or coronary artery bypass grafting (CABG), myocardial infarction (heart attack), cardiac arrest, hospitalization for unstable angina, acute coronary syndrome, stroke, or transient ischemic attack
- * Obesity
- * Family history of premature coronary heart disease or sudden death in a first-degree male relative younger than 55 years of age or in a first-degree female relative younger than 65 years of age.

4.2 Exclusion Criteria

- * Participants must not have recent history of 1 of the following cardiovascular events: MI, stroke, or coronary revascularization, or VTE within 90 days prior to Day 1.
- * Participants must not have unstable CVD, defined as a recent clinical cardiovascular event (eg, unstable angina, rapid atrial fibrillation), or a cardiac hospitalization (eg, pacemaker implantation, HF) within 90 days prior to Day 1.
- * Participants must not have evidence of active cancer or history of cancer (solid organ or hematologic malignancy including myelodysplastic syndrome) or lymphoproliferative disease within the previous 5 years (other than resected cutaneous basal cell or squamous cell carcinoma, or carcinoma of cervix in situ that has been treated with no evidence of recurrence).
- * Other protocol define inclusion/exclusion criteria apply.

11. Study Identifiers & Governance

Primary ID: 536837331388002292

Registry Number: NCT07116967

Sponsor: Bristol Myers Squibb

Study Title: Long-Term Safety Study of Deucravacitinib Versus Ustekinumab in Participants With Psoriasis (PRAGMATYK)

15. Sign-off & Approval

Principal Investigator: _____ Date: _____

Clinical Operations Lead: _____ Date: _____
