

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 3, Randomized, Double-blind, Placebo-controlled Study to Evaluate the Efficacy and Safety of Deucravacitinib in Participants With Active Psoriatic Arthritis Who Are Naïve to Biologic Disease-modifying Anti-rheumatic Drugs
Short Title:	A Study to Determine the Efficacy and Safety of Deucravacitinib Compared With Placebo in Participants With Active Psoriatic Arthritis (PsA) Who Are Naïve to Biologic Disease-modifying Anti-rheumatic Drugs
Protocol Number:	608279908339159511
NCT Number:	NCT04908202
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	deucravacitinib
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Percentage of Participants With ACR 20 Response at Week 16: The ACR 20 definition of improvement is a 20% improvement over baseline in tender and swollen joint counts (#1 and #2) and a 20% improvement in 3 of the 5 remaining core data set measures (Participant global assessment of pain, participant global assessment of disease activity, physician global assessment of disease activity, participant assessment of physical function, and acute phase reactant value). Baseline value is the last assessment taken prior to first dose of single-blind study medication. The 95% CI is calculated using Clopper-Pearson exact method.
Secondary Obj.:	1. Change From Baseline in Disease Activity Score 28 C-reactive Protein (DAS28-CRP) at Week 16 2. Change From Baseline in Health Assessment Questionnaire - Disability Index (HAQ-DI) at Week 16 3. Percentage of Participants Meeting Psoriatic Area and Severity Index (PASI) 75 Response at Week 16, in Participants With at Least 3% Body Surface Area (BSA) Involvement and at Least Static Physician's Global Assessment (sPGA) 2 at Baseline

2.2 Background & Rationale

The purpose of this study is to evaluate the efficacy and safety of deucravacitinib versus placebo in participants with active psoriatic arthritis who are naïve to biologic disease-modifying anti-rheumatic drugs. The long term extension period will provide additional long-term efficacy and safety information.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: ACTIVE_NOT_RECRUITING
