

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 2b, Randomized, Double-Blind, Placebo-Controlled Study to Evaluate the Efficacy and Safety of Tulisokibart in Participants With Rheumatoid Arthritis
Short Title:	A Clinical Study of Tulisokibart (MK-7240) to Treat Rheumatoid Arthritis (RA) (MK-7240-014)
Protocol Number:	1111142057381689332
NCT Number:	NCT07176390
Sponsor Name:	Merck
Investigational Product:	methotrexate
Phase:	PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Proportion of Participants Achieving American College of Rheumatology 20% Response Criteria (ACR20) at Week 12: The ACR20 response is a composite measure to evaluate disease activity in RA. ACR20 response is defined as a ≥20% improvement in: a) swollen joint count (66 joints) and tender joint count (68 joints) (0= Absent; 1= Present) and b) ≥20% improvement in ≥3 of the following 5 assessments and questionnaires: i) Health Assessment Questionnaire Disability Index (HAQ-DI) (0=without any difficulty; 3= unable to do) a higher score=worse disability, ii) Physician Global Assessment of Disease Activity (PGA) (0= not active to 10= very active) a higher score= more active disease; iii) Patient's Global Assessment of Disease Activity (PtGA) (0= not active to 10= very active) a higher score= more active disease; iv) Patient assessment of Pain Severity (0= no pain to 10= most severe pain) a higher score = more pain; v) High-sensitivity C-reactive protein (hsCRP) serum values, a lower value indicates less inflammation. The proportion of participants with ACR20 response at Week 12 will be presented.
Secondary Obj.:	1. Proportion of Participants Achieving American College of Rheumatology 50% Response Criteria (ACR50) at Week 12 2. Proportion of Participants Achieving American College of Rheumatology 70% Response Criteria (ACR70) at Week 12 3. Proportion of Participants Achieving Low Disease Activity (LDA) based on Disease Activity Score 28 Using C-Reactive Protein (DAS28-CRP)

2.2 Background & Rationale

Researchers are looking for new ways to treat rheumatoid arthritis (RA). Methotrexate (MTX) is a standard (usual) treatment for RA. However, MTX and other current treatments may not work well to treat RA symptoms for many people.

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

3. Study Design & Methodology

Design Framework: Type: INTERVENTIONAL, Phase: PHASE2, Status: RECRUITING

Target N: 182

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

The main inclusion criteria include but are not limited to the following:

- * Has a clinical diagnosis of rheumatoid arthritis (RA) and fulfillment of 2010 American College of Rheumatology (ACR)/European League Against Rheumatism (EULAR) classification criteria
- * Has active disease defined as ≥ 6 tender joints (based on 68 joints) and ≥ 6 swollen joints (based on 66 joints)
- * Has current treatment with oral or parenteral methotrexate (MTX) therapy
- * Has history of one of the following: a) biologic disease-modifying antirheumatic drug (bDMARD) naïve, or b) bDMARD-Inadequate Response (IR)/intolerant up to a maximum of 2 classes of bDMARDS

4.2 Exclusion Criteria

The main exclusion criteria include but are not limited to the following:

- * Has any arthritis with onset before age 17 years or current diagnosis of inflammatory joint disease other than RA (such as, but not limited to, psoriatic arthritis, systemic lupus erythematosus, gout, systemic sclerosis, myositis, pseudogout, etc) or any other condition that may, in the judgment of the investigator, interfere with the assessment of RA
- * Has a history of cancer (except fully treated nonmelanoma skin cancers or cervical carcinoma in situ after complete surgical removal) and is disease free for ≥ 5 years before randomization
- * Has any active infection
- * Has known allergies, hypersensitivity, or intolerance to tixagevimab or its excipients

11. Study Identifiers & Governance

Primary ID: 1111142057381689332

Registry Number: NCT07176390

Sponsor: Merck

Study Title: A Clinical Study of Tixagevimab (MK-7240) to Treat Rheumatoid Arthritis (RA) (MK-7240-014)

15. Sign-off & Approval

Principal Investigator: _____ Date: _____

Clinical Operations Lead: _____ Date: _____
