

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase II, Randomized, Open-label, Parallel Group, Multicenter Study to Assess Bioequivalence of Two Subcutaneous Formulations of Ocrelizumab in Patients With Multiple Sclerosis
Short Title:	A Study to Assess Bioequivalence of Two Subcutaneous (SC) Formulations of Ocrelizumab in Participants With Multiple Sclerosis (MS)
Protocol Number:	1137933043976371606
NCT Number:	NCT07074886
Sponsor Name:	Roche
Investigational Product:	ocrelizumab
Phase:	PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Area Under the Serum Concentration-time Curve (AUC) of Ocrelizumab 2. Maximum Serum Concentration (Cmax) of Ocrelizumab
Secondary Obj.:	1. Number of Participants With Adverse Events (AEs)

2.2 Background & Rationale

The main purpose of this study is to assess the bioequivalence of ocrelizumab SC test formulation to the marketed ocrelizumab SC reference formulation in participants with either relapsing multiple sclerosis (RMS) or primary progressive multiple sclerosis (PPMS). The study consists of 2 phases: a controlled phase, where participants in each group will receive one dose of test or reference formulation and a continuation phase, where all participants in both groups will receive ocrelizumab SC test formulation.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE2, Status: NOT_YET_RECRUITING
Target N:	182

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Diagnosis of RMS or PPMS according to the revised McDonald 2017 criteria (Thompson et al. 2018) or the most current McDonald criteria at the time of study start
- * Expanded Disability Status Scale (EDSS) score, 0-6.5, inclusive, at screening

4.2 Exclusion Criteria

- * Participants who have previously received anti-cluster of differentiation (CD)20s (including ocrelizumab) less than 2

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

years before screening

- * Participants who have previously received anti-CD20s (including ocrelizumab) more than 2 years before screening if one of the following conditions is met: B-cell count is below lower limit of normal (LLN), or the discontinuation of the treatment was due to safety reasons
- * History of confirmed or suspected progressive multifocal leukoencephalopathy (PML)
- * History of cancer, including hematologic malignancy and solid tumors, within 10 years of screening
- * Immunocompromised state
- * Sensitivity or intolerance to any ingredient (including excipients) of ocrelizumab
- * History of severe allergic or anaphylactic reactions to humanized or murine monoclonal antibodies
- * Any concomitant disease that may require chronic treatment with systemic corticosteroids or immunosuppressants during the course of the study
- * Significant, uncontrolled disease, such as cardiovascular, pulmonary, renal, hepatic, endocrine or gastrointestinal, or any other significant disease that may preclude participation in the study
- * Lack of peripheral venous access
- * Previous treatment with cladribine, atacicept, and alemtuzumab
- * Any previous treatment with bone marrow transplantation and hematopoietic stem cell transplantation
- * Any previous history of transplantation or anti-rejection therapy
- * Positive screening tests for active, latent, or inadequately treated hepatitis B virus (HBV)

11. Study Identifiers & Governance

Primary ID: 1137933043976371606

Registry Number: NCT07074886

Sponsor: Roche

Study Title: A Study to Assess Bioequivalence of Two Subcutaneous (SC) Formulations of Ocrelizumab in Participants With Multiple Sclerosis (MS)
