

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 2, Open-label, Randomized Trial to Evaluate Two Dosing Regimens of Subcutaneous Formulation of Nivolumab in Combination With Intravenous Ipilimumab and Chemotherapy in Participants With Previously Untreated Metastatic or Recurrent NSCLC
Short Title:	A Study to Evaluate Two Dosing Regimens of Subcutaneous Nivolumab in Combination With Intravenous Ipilimumab and Chemotherapy in Participants With Previously Untreated Metastatic or Recurrent Non-Small Cell Lung Cancer (NSCLC)
Protocol Number:	380139453263520563
NCT Number:	NCT06946797
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	cisplatin
Phase:	PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Maximum observed serum concentration (Cmax) of subcutaneous Nivolumab in serum 2. Time to peak concentration (Tmax) of subcutaneous Nivolumab in serum 3. Area under the concentration-time curve within a dosing interval (AUC(TAU)) of subcutaneous Nivolumab in serum
Secondary Obj.:	1. Number of participants with adverse events (AEs) 2. Number of participants with serious adverse events (SAEs) 3. Number of participants with drug related AEs

2.2 Background & Rationale

The purpose of this study is to evaluate two dosing regimens of subcutaneous Nivolumab in combination with intravenous Ipilimumab and chemotherapy in participants with previously untreated metastatic or recurrent Non-Small Cell Lung Cancer (NSCLC)

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE2, Status: RECRUITING
Target N:	76

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Not Provided

4.2 Exclusion Criteria

Clinical Study Summary Report (CSSR)
