

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Randomized Phase II, Double-Blind, Multicenter Study Evaluating the Efficacy and Safety of Autogene Cevumeran Plus Nivolumab Versus Nivolumab as Adjuvant Therapy in Patients With High-Risk Muscle-Invasive Urothelial Carcinoma
Short Title:	A Study to Evaluate the Efficacy and Safety of Autogene Cevumeran With Nivolumab Versus Nivolumab Alone in Participants With High-Risk Muscle-Invasive Urothelial Carcinoma (MIUC)
Protocol Number:	475504151196251922
NCT Number:	NCT06534983
Sponsor Name:	Roche
Investigational Product:	sodium chloride
Phase:	PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Investigator Assessed Disease Free Survival (INV-DFS): Disease recurrence is defined as any of the following: * Local (pelvic) recurrence of urothelial carcinoma (UC) (including soft tissue and regional lymph nodes) * Urinary tract recurrence of UC (excluding low-grade non-muscle-invasive bladder cancer (NMIBC)) * Distant metastasis of UC
Secondary Obj.:	1. Overall Survival (OS) 2. INV Assessed DFS in Programmed Death Ligand-1 (PD-L1) Expression ? 1% Population 3. INV Assessed Distant Metastasis-Free Survival (DMFS)

2.2 Background & Rationale

The main purpose of the study is to evaluate the efficacy of adjuvant treatment with autogene cevumeran plus nivolumab compared with nivolumab in participants with high risk MIUC.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE2, Status: RECRUITING
Target N:	362

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * Participants must have the capacity to participate/enroll in the study and to provide informed consent
- * Histologically confirmed muscle-invasive UC (also termed TCC) of the bladder or upper urinary tract
- * TNM classification (UICC/AJCC 7th edition) at pathological examination of surgical resection specimen of (y)pT3-4 or (y)pN+ and M0
- * Surgical resection of MIUC of the bladder or upper tract
- * Participants who have not received prior neoadjuvant cisplatin chemotherapy (NAC) must be ineligible to receive adjuvant cisplatin therapy due to participant refusal, cisplatin ineligibility or investigator decision
- * Tumor tissue must be provided for biomarker analysis
- * Absence of residual disease and absence of metastasis, as confirmed by a negative baseline Computed Tomography (CT) or Magnetic Resonance Imaging (MRI) scan of the pelvis, abdomen, and chest no more than 28 days prior to randomization.
- * Full recovery from cystectomy or nephroureterectomy within 120 days following surgery
- * Eastern Cooperative Oncology Group (ECOG) performance status of 0 or 1
- * Negative HIV test at screening
- * Negative hepatitis B surface antigen (HbsAg) test at screening
- * Positive hepatitis B surface antibody (HBsAb), or a negative HBsAb at screening accompanied by either of the following: negative total hepatitis B core antibody (HBcAb) or positive total HBcAb test followed by quantitative hepatitis B virus (HBV) DNA < 500 international units/milliliter (IU/mL)
- * Negative hepatitis C virus (HCV) antibody test at screening, or a positive HCV antibody test followed by a negative HCV RNA test at screening

4.2 Exclusion Criteria

- * Partial cystectomy in the setting of bladder cancer primary tumor or partial nephroureterectomy in the setting of renal pelvis primary tumor
- * Any approved anti-cancer therapy, including chemotherapy, or hormonal therapy within 3 weeks prior to initiation of study treatment
- * Any prior neoadjuvant immunotherapy
- * Adjuvant chemotherapy or radiation therapy for UC following surgical resection
- * Malignancies other than UC within 5 years prior to randomization
- * Treatment with a live, attenuated vaccine within 4 weeks prior to initiation of study treatment

11. Study Identifiers & Governance

Primary ID:	475504151196251922
Registry Number:	NCT06534983
Sponsor:	Roche
Study Title:	A Study to Evaluate the Efficacy and Safety of Autogene Cevumeran With Nivolumab Versus Nivolumab Alone in Participants With High-Risk Muscle-Invasive Urothelial Carcinoma (MIUC)

15. Sign-off & Approval
