

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	Phase 2a Proof-of-Concept, Multicenter, Randomized, Open Label Study to Evaluate the Efficacy, Safety, and Pharmacokinetics of a Single Dose of the Combination M5717-pyronaridine as Chemoprevention in Asymptomatic Adults and Adolescents With Plasmodium Falciparum Malaria Infection (CAPTURE-2)
Short Title:	Efficacy, Safety, and PK of M5717 in Combination With Pyronaridine as Chemoprevention in Adults and Adolescents With Asymptomatic Plasmodium Falciparum Infection (CAPTURE-2)
Protocol Number:	604580946023048583
NCT Number:	NCT05974267
Sponsor Name:	Merck
Investigational Product:	proguanil
Phase:	PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Time to Parasitemia Since Negative Blood Smear after Treatment
Secondary Obj.:	1. Percentage of Participants with Parasitemia (positive blood smear). 2. Percentage of Participants with Polymerase Chain Reaction (PCR)-adjusted Parasitemia (Thick Smear/Microscopy, after Adjustment for Parasitemia due to new Infections as determined by Genotyping using PCR Techniques) 3. Percentage of Participants with PCR-adjusted Parasitemia (Thick Smear/Microscopy, after Adjustment for Parasitemia due to Recrudescence as determined by Genotyping using PCR Techniques)

2.2 Background & Rationale

This study will evaluate the efficacy and safety of a single dose of M5717 plus pyronaridine tetraphosphate in clearing current Plasmodium falciparum infection and protecting against recurrent infections in asymptomatic adults and adolescents. The study will also assess the duration of protection provided by different doses of M5717 plus pyronaridine and the additional contribution of M5717 to the duration of protection using external study data.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE2, Status: COMPLETED
Target N:	192

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * Participants with Asymptomatic Plasmodium falciparum Malaria with no Fever or other sign of Acute Uncomplicated Malaria and, with Microscopic confirmation using Giemsa-stained thick film, and a Parasitemia of ≥ 40 to $\leq 10,000$ Asexual Parasites/Microliter (μ L) of Blood.
- * Axillary Temperature < 37.0 degree Celcius ($^{\circ}$ C) or oral/Tympanic/rectal Temperature $< 37.5^{\circ}$ C; without history of fever during the previous 48 hours.
- * Have a body weight ≥ 45 kilogram (kg)
- * Participants capable of giving Signed Informed consent which includes Compliance with the requirements and restriction listed in the Informed consent form
- * Other Protocol defined Inclusion Criteria could apply

4.2 Exclusion Criteria

- * Participants with any disease requiring Chronic Treatment
- * Participants with any Preplanned surgery during the study
- * Participants with any previous Treatment with pyronaridine as part of a combination therapy during the last 3 months
- * Participants with any adequate Hematological, Hepatic, and renal function as defined in the Protocol
- * Other protocol defined Exclusion Criteria could apply

11. Study Identifiers & Governance

Primary ID: 604580946023048583

Registry Number: NCT05974267

Sponsor: Merck

Study Title: Efficacy, Safety, and PK of M5717 in Combination With Pyronaridine as Chemoprevention in Adults and Adolescents With Asymptomatic Plasmodium Falciparum Infection (CAPTURE-2)

15. Sign-off & Approval

Principal Investigator: _____ Date: _____

Clinical Operations Lead: _____ Date: _____
