

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Dual-cohort, Open-label, Phase 2 Study of Brentuximab Vedotin and CHP (A+CHP) in the Frontline Treatment of Subjects With Peripheral T-cell Lymphoma (PTCL) With Less Than 10% CD30 Expression
Short Title:	A Study of Brentuximab Vedotin and CHP in Frontline Treatment of PTCL With Less Than 10% CD30 Expression
Protocol Number:	929279054357569099
NCT Number:	NCT04569032
Sponsor Name:	Pfizer
Investigational Product:	cyclophosphamide
Phase:	PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Objective Response Rate (ORR) Per Blinded Independent Central Review (BICR) by Revised Response Criteria for Malignant Lymphoma Criteria (Cheson 2007) by Central CD30 Assessment: ORR was defined as the percentage of participants with complete response (CR) or partial response (PR) following the completion of study treatment (at end of treatment \[EOT\]). CR and PR per Cheson 2007: CR was defined as complete disappearance of all detectable clinical evidence of disease and disease-related symptoms if present before therapy and PR was defined as at least a 50% decrease in sum of the product of the diameters (SPD) of up to six of the largest dominant nodes or nodal masses.
Secondary Obj.:	1. Complete Response (CR) Rate Per BICR (Cheson 2007) by Central CD30 Assessment 2. Progression Free Survival (PFS) Per BICR (Cheson 2007) by Central CD30 Assessment 3. Overall Survival (OS) by Central CD30 Assessment

2.2 Background & Rationale

This clinical trial will study brentuximab vedotin with CHP to find out if the drugs work for people who have certain types of peripheral T-cell lymphoma (PTCL). It will also find out what side effects occur when brentuximab vedotin and CHP are used together. A side effect is anything the drugs do besides treating cancer. CHP is a type of chemotherapy that uses three drugs (cyclophosphamide, doxorubicin, and prednisone). CHP is approved by the FDA to treat certain types of PTCL.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE2, Status: ACTIVE_NOT_RECRUITING
Target N:	82

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Not Provided

4.2 Exclusion Criteria

Not Provided

11. Study Identifiers & Governance

Primary ID: 929279054357569099

Registry Number: NCT04569032

Sponsor: Pfizer

Study Title: A Study of Brentuximab Vedotin and CHP in Frontline Treatment of PTCL With Less Than 10% CD30 Expression

15. Sign-off & Approval

Principal Investigator: _____ Date: _____

Clinical Operations Lead: _____ Date: _____

Lead Statistician: _____ Date: _____
