

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase II, Randomized, Double-blind, Placebo-controlled, Multicenter Study Evaluating Efficacy, Safety, and Pharmacokinetics of Crovalimab in Patients With Antiphospholipid Syndrome (APS)
Short Title:	A Study to Evaluate Crovalimab in People With Antiphospholipid Syndrome (APS)
Protocol Number:	974576296684220866
NCT Number:	NCT07172022
Sponsor Name:	Roche
Investigational Product:	Crovalimab
Phase:	PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Time From Randomization to First Occurrence of Objectively Confirmed Arterial Thrombosis, Venous Thromboembolism or Cardiovascular Death
Secondary Obj.:	1. Time From Randomization to the First Occurrence of Objectively Confirmed Venous Thromboembolism 2. Time From Randomization to the First Occurrence of Objectively Confirmed Arterial Thrombosis 3. Percentage of Participants With Adverse Events (AEs) With Severity Determined According to the Common Terminology Criteria for Adverse Events Version 5.0 (CTCAE v5.0)

2.2 Background & Rationale

The main purpose of this study is to evaluate the efficacy of crovalimab compared with placebo as an add-on therapy to vitamin K antagonist (VKA) in participants with APS.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE2, Status: NOT_YET_RECRUITING
Target N:	300

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Age ≥18 years and ≤70 years, and body weight ≥40 kilograms (kg), at the time of signing Informed Consent Form
- * Vaccination against N. meningitidis, H. influenzae type B, and S. pneumoniae
- * Participants classified with APS who have experienced at least two prior arterial and/or venous thrombotic events, based on the 2023 American College of Rheumatology/European Alliance of Associations for Rheumatology (ACR/EULAR) criteria, positive for at least two of the following: lupus anticoagulant (LAC) test, anticardiolipin antibodies

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

(aCL), anti- β 2-glycoprotein 1 antibodies (a β 2GP1)

- * Participants receiving corticosteroids, antimalarial treatment, non-biologic disease-modifying rheumatic drugs, statins, and low dose aspirin must be on a stable dose prior to the first dose of study treatment
- * Willingness and ability to comply with a VKA regimen titrated to a therapeutic target internal normalized ratio (INR)
- * Agreement to adhere to the contraception requirements

4.2 Exclusion Criteria

- * Pregnant or breastfeeding, or intention of becoming pregnant during the study or within the time frame in which contraception is required
- * Treatment with investigational therapy, complement inhibitor, and/or other immune-suppressive biologic therapy within 5 half-lives of that agent prior to screening visit, or plans to participate in another investigational trial
- * Presence of another systemic autoimmune disease that is unstable and requires additional treatment, and constitutes the principal illness and may impact evaluation of the concurrent APS
- * Inadequate renal and hepatic function
- * Uncontrolled hyperlipidemia and/or hypertension, known diabetes mellitus, and/or serious infection requiring hospitalization or antibiotics prior to Week 1 Day 1
- * History or condition associated with increased bleeding risk

11. Study Identifiers & Governance

Primary ID: 974576296684220866
Registry Number: NCT07172022
Sponsor: Roche
Study Title: A Study to Evaluate Crovalimab in People With Antiphospholipid Syndrome (APS)

15. Sign-off & Approval

Principal Investigator: _____ Date: _____
