

1. Administrative & Study Identification

Full Study Title: An Open-Label, Multi-Center Extension Study to Characterize the Long-Term Safety and Efficacy of BMS-986165 in Subjects With Moderate-to-Severe Plaque Psoriasis **Short Title/ Acronym:** POETKYK PS0-LTE **Protocol Number:** IM011-075 **NCT Number:** NCT04036435 **Sponsor Name:** Bristol-Myers Squibb **Investigational Product:** Deucravacitinib (BMS-986165) **Phase of Development:** Phase 3 **Medical Monitor:** Bristol-Myers Squibb Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To evaluate the long-term safety and tolerability of the drug deucravacitinib (BMS-986165) in participants with moderate-to-severe plaque psoriasis who have been previously enrolled in an applicable Phase 3 parent study. **Secondary Objectives:** To evaluate the long-term efficacy, characterized by the maintenance of clinical responses including PASI 75, PASI 90, and sPGA 0/1. Additionally, to evaluate the safety and the humoral immune response to two non-live vaccines (Pneumovax 23 and Boostrix) in a specific vaccine cohort receiving deucravacitinib compared to those receiving a placebo.

2.2 Background & Rationale To characterize the long-term safety, tolerability, and durability of clinical response of deucravacitinib, an oral, selective TYK2 inhibitor, in patients with moderate-to-severe plaque psoriasis. While 52-week parent trials (POETKYK PS0-1 and PS0-2) established initial efficacy and safety, this long-term extension (LTE) generates multi-year real-world evidence confirming the manageable safety profile and sustained maintenance of skin clearance over an extended period of up to 5 years.

3. Study Design & Methodology

3.1 Design Framework Study Type: Interventional **Control Type:** Single-arm (Open-label extension) for the main cohort; Placebo-controlled for the vaccine sub-cohort **Blinding:** Open-label (Main LTE cohort) **Randomization:** N/A (All rollover participants from parent trials receive the investigational product)

3.2 Planned Enrollment & Duration Target **\$N\$:** 1,466 participants **Number of Sites:** Multi-center (Global, including sites in the US, Canada, Poland, Japan, etc.) **Estimated Study Start:** 12-Aug-2019 **Estimated Primary Completion:** 25-Jul-2026

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Completion of the protocol-required treatment period in an applicable parent study of BMS-986165 in moderate-to-severe psoriasis (e.g., POETYK PSO-1, PSO-2, or PSO-4). 2. Women of childbearing potential must not be pregnant, lactating, or breastfeeding. 3. *Vaccine Cohort specific:* Subject must have moderate-to-severe plaque psoriasis, be currently receiving deucravacitinib treatment in the main IM011-075 LTE cohort, and must have completed at least one year of deucravacitinib treatment.

4.2 Exclusion Criteria 1. Any disease or medical condition that the investigator feels would make the patient unsuitable for the study. 2. Active signs or symptoms of tuberculosis (TB) as judged by the investigator. 3. *Vaccine Cohort specific:* Subject received the Pneumovax 23 vaccine ≤ 5 years before Day 1, or the Boostrix vaccine ≤ 5 years before Day 1.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: Deucravacitinib 6 mg once daily. **Route of Administration:** Oral **Duration of Treatment:** Up to 244 weeks (approximately 5 years).

5.2 Concomitant & Prohibited Therapy Permitted: Standard allowed concomitant medications for co-morbidities from the parent trials; non-live vaccines (in the vaccine cohort). **Prohibited:** Concurrent use of other systemic immunosuppressive therapies, biologic therapies, or investigational drugs for psoriasis during the extension phase.

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures
1	Screening	Informed Consent for LTE, Rollover baseline assessments, PASI/SPGA scoring
2	Baseline	Day 1
3-24	Interim	Open-label treatment initiation (6 mg deucravacitinib once daily)
25-244	End of Study	Safety Labs, Efficacy Assessment (PASI, SPGA), AE/SAE monitoring
245	Exit	Up to Week 244 Final Vital Signs, Exit Interview, Efficacy Assessments, IP Accountability

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: Incidence of Adverse Events (AEs) and Serious Adverse Events (SAEs) assessed as Exposure-Adjusted Incidence Rates (EAIRs) up to 244 weeks. **Measurement Method:** Clinical safety tracking, physical examinations, and routine laboratory monitoring (lipids, chemistry, hematology).

7.2 Secondary & Exploratory Endpoints 1. Proportion of patients achieving or maintaining a $\geq 75\%$ reduction from baseline in the Psoriasis Area and Severity Index (PASI 75) and PASI 90. 2. Proportion of patients achieving a static Physician Global Assessment (sPGA) score of 0 (clear) or 1 (almost clear). 3. Impact of deucravacitinib on the humoral immune response to non-live vaccines (Pneumovax 23 and Boostrix).

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Continuous collection at study visits; tracked using Exposure-Adjusted Incidence Rates (EAIRs) per 100 person-years (focusing on AEs of interest like infections, COVID-19, and laboratory abnormalities). **Serious Adverse Events (SAEs):** Evaluated continuously up to 244 weeks. **Data Monitoring Committee (DMC):** Maintained by the sponsor (Bristol-Myers Squibb) to review long-term safety signals.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: As-treated safety population (patients who received at least one dose of deucravacitinib in the parent or LTE trial). **Sample Size Justification:** Approximately 1,466 participants rolling over from the parent POETYK Phase 3 clinical programs. **Handling of Missing Data:** As-observed analyses for long-term continuous efficacy tracking; multiple imputation or non-responder imputation (NRI) utilized for specific categorical efficacy endpoints where applicable.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Clinical Practice (GCP) and the Declaration of Helsinki. **Monitoring Plan:** Regular onsite and remote monitoring of safety profiles and continuous efficacy. **Audit Trail:** eCRF locking, tracking of laboratory safety parameters (e.g., CPK, ALT/AST, triglycerides), and data clarification forms.

11. Study Identifiers & Governance

Primary ID: IM011-075 **Registry Number:** NCT04036435 **Sponsor/Lead Organization:** Bristol-Myers Squibb **Study Title:** POETYK PSO-LTE **Official Regulatory Title:** An Open-Label, Multi-Center Extension Study to Characterize the Long-Term Safety and Efficacy of BMS-986165 in Subjects With Moderate-to-Severe Plaque Psoriasis

12. Clinical Framework (Psoriasis Specific)

Primary Condition: Moderate-to-Severe Plaque Psoriasis **Diagnosis Threshold:** Psoriasis criteria defined at baseline of parent trials (e.g., PASI ≥ 12 , sPGA ≥ 3 , BSA involvement $\geq 10\%$). **Medical Methodology:** Systemic Oral Therapy (Selective TYK2 Inhibitor) **Optimization Target:** Maintenance of PASI 75/90 and sPGA 0/1 responses through long-term continuous therapy.

13. Study Procedures & Methodology

Management Pathway: Open-label long-term extension continuous tracking. **Education Protocol (HCP):** AE monitoring standards associated with TYK2 inhibitors. **Education Protocol (Patient):** Daily oral medication adherence counseling and real-time AE reporting guidance. **Quality Audit Mechanism:** Periodic centralized review of laboratory variations (e.g., CPK, lipids) and overall EAIRs.

14. Observation & Follow-Up Schedule

Total Duration: Up to 244 weeks (approx. 5 years) **Onsite Visit Cadence:** Extended interval visits (e.g., Q12W to Q24W) per LTE maintenance schedule. **Remote Monitoring Frequency:** Regular interval check-ins between long-term clinical visits. **Checklist Review Interval:** Concomitant medications, AEs, and PASI/sPGA review at each clinical interval.
