

1. Administrative & Study Identification

Full Study Title: A Nationwide Post-Marketing Study on the Safety of Abatacept Treatment in Sweden Using the SRQ Register **Short Title/Acronym:** A Post-marketing Study to Assess the Safety of Abatacept in Sweden **Protocol Number:** IM101-816 **NCT Number:** NCT05413044 **Sponsor Name:** Bristol-Myers Squibb **Investigational Product:** Abatacept (Orencia) **Phase of Development:** Phase IV (Post-marketing / Observational) **Medical Monitor:** Bristol-Myers Squibb Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective **Primary Objective:** To collect real-world data in order to estimate the frequency of overall malignancies, melanoma, basal cell carcinoma, and squamous cell carcinoma in participants with rheumatoid arthritis (RA) or psoriatic arthritis (PsA) enrolled in the Swedish Rheumatology Quality (SRQ) Register in Sweden. **Secondary Objectives:** To compare the long-term real-world safety and malignancy risk profiles of abatacept versus non-targeted DMARDs and other targeted DMARDs in established RA and PsA populations.

2.2 Background & Rationale To assess the long-term, real-world safety profile of abatacept, specifically concerning cancer risks. Given that immunomodulatory drugs can alter immune surveillance, this nationwide post-marketing study utilizes robust national registry data to continuously evaluate the incidence of malignancies (particularly skin cancers) to inform ongoing safety and prescribing guidelines in routine clinical practice.

3. Study Design & Methodology

3.1 Design Framework **Study Type:** Observational (Registry-based Cohort Study) **Control Type:** Active Comparator (Patients receiving non-targeted DMARDs or other targeted DMARDs) **Blinding:** Open-label / N/A (Observational) **Randomization:** N/A (Real-world registry data)

3.2 Planned Enrollment & Duration **Target** \$N\$: 140,706 participants **Number of Sites:** Nationwide cohort (Sweden, utilizing the SRQ Register) **Estimated Study Start:** 01-Jul-2019 **Estimated Primary Completion:** 22-Aug-2025 **Study Completion:** 31-Oct-2025

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Diagnosis of Rheumatoid Arthritis (RA) or Psoriatic Arthritis (PsA). 2. Age ≥ 18 years at index treatment initiation. 3. Participants enrolled in the SRQ Register who started treatment with: abatacept, non-targeted DMARDs, or targeted DMARDs between January 2007 and January 2021.

4.2 Exclusion Criteria 1. Not applicable (No specific exclusion criteria defined; broad real-world population).

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: Routine clinical care dosing as prescribed by the treating rheumatologist. **Route of Administration:** Intravenous (IV) or Subcutaneous (SC) (Standard abatacept administration pathways). **Duration of Treatment:** Ongoing routine clinical exposure (Index period spanning 2007–2021 with longitudinal registry follow-up).

5.2 Concomitant & Prohibited Therapy Permitted: Standard concomitant medications and non-targeted DMARDs allowed in routine clinical practice for RA and PsA. **Prohibited:** N/A (Observational study; treatment is determined by the physician's therapeutic decision).

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures
1	Index Date	Day 0 Treatment initiation of abatacept or comparator DMARD
2	Observation	2007 to 2021 Continuous monitoring via Swedish Rheumatology Quality (SRQ) Register
3	Data Linkage	Annual Cross-referencing SRQ data with Swedish Cancer and Health Registries
4	End of Study	Oct 2025 Final dataset lock, statistical modeling, and safety evaluations

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: Frequency (Incidence Rate) of overall malignancies, including melanoma, basal cell carcinoma, and squamous cell carcinoma. **Measurement Method:** Linkage of SRQ Register data with the Swedish National Cancer Register.

7.2 Secondary & Exploratory Endpoints Comparative incidence rates and hazard ratios of malignancies between the abatacept cohort and the active comparator cohorts (targeted and non-targeted DMARDs).

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Standard clinical monitoring captured indirectly through diagnosis codes and disease activity metrics entered into the SRQ Register. **Serious Adverse Events (SAEs):** Specific tracking of severe outcomes (malignancies) through linkage with national health and mortality registries. **Data Monitoring Committee (DMC):** Managed jointly by SRQ administrators and Bristol-Myers Squibb observational research teams.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: All eligible registry patients ≥ 18 years with RA or PsA initiating the index therapies. **Sample Size Justification:** A large, population-based cohort ($N=140,706$) ensures sufficient statistical power to detect rare events like specific subtypes of skin cancer. **Handling of Missing Data:** Epidemiological methods for real-world data (e.g., multiple imputation, propensity score matching to adjust for baseline covariates).

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study is conducted in accordance with Good Pharmacoepidemiology Practices (GPP) and complies with European data protection regulations (GDPR) regarding patient registry data. **Monitoring Plan:** Automated data validation rules within the SRQ Register and periodic audits of registry linkages. **Audit Trail:** Secure encryption and anonymized unique patient identifiers are utilized for registry linkage to ensure data integrity and patient confidentiality.

11. Study Identifiers & Governance

Primary ID: IM101-816 **Registry Number:** NCT05413044 **Sponsor/Lead Organization:** Bristol-Myers Squibb **Study Title:** A Post-marketing Study to Assess the Safety of Abatacept in Sweden Using the Swedish Rheumatology Quality Register (SRQ) Register **Official Regulatory Title:** A Nationwide Post-Marketing Study on the Safety of Abatacept Treatment in Sweden Using the SRQ Register

12. Clinical Framework (Rheumatology Specific)

Primary Condition: Rheumatoid Arthritis (RA) and Psoriatic Arthritis (PsA) **Diagnosis Threshold:** Established clinical diagnosis entered into the SRQ **Medical Methodology:** Targeted and Non-Targeted Disease-Modifying Antirheumatic Drug (DMARD) Therapy

Optimization Target: Long-term disease suppression with minimized oncologic risk

13. Study Procedures & Methodology

Management Pathway: Standard routine rheumatology care in Sweden
Education Protocol (HCP): N/A (Real-world observational design)
Education Protocol (Patient): N/A (Standard clinical care)
Quality Audit Mechanism: Continuous data quality assurance conducted by the SRQ steering committee and national health boards.

14. Observation & Follow-Up Schedule

Total Duration: Retrospective and prospective evaluation of treatment from 2007 to 2021 (with evaluation running until 2025).
Onsite Visit Cadence: Dictated by standard clinical practice (typically every 3–6 months for RA/PsA patients). **Remote Monitoring Frequency:** Continuous registry data accrual. **Checklist Review Interval:** Annual database linkage and epidemiological review.

15. Sign-off & Approval
