

1. Administrative & Study Identification

Full Study Title: Ngenla Subcutaneous Injection Special Investigation
Short Title/Acronym: Ngenla Special Investigation
Protocol Number: C0311011
NCT Number: NCT05602766
Trial Status: ACTIVE_NOT_RECRUITING (Active but not currently recruiting)
Sponsor/Company Name: Pfizer
Investigational Product: NGENLA® (somatrogon) Subcutaneous Injection
Phase of Development: Not Applicable
Medical Monitor: Pfizer Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To evaluate the long-term safety and effects of Ngenla for long-term use in patients with Growth Hormone Deficiency (GHD) without epiphyseal closure under daily medical practice. Secondary Objectives: To observe growth parameters over time, treatment adherence, and real-world clinical experiences with Ngenla subcutaneous injection.

2.2 Background & Rationale To address the need for long-term real-world data regarding the use of Ngenla. Ngenla is approved for the treatment of GHD without epiphyseal closure under standard daily medical practice. This special investigation will gather longitudinal data from medical records to determine the safety, tolerability, and effects of Ngenla during prolonged treatment.

3. Study Design & Methodology

3.1 Design Framework Study Type: Observational (Multi-center Cohort Study) Study Status: ACTIVE_NOT_RECRUITING Control Type: Single-arm (No control, cohort tracking) Blinding: Open-label (Non-interventional) Randomization: N/A

3.2 Planned Enrollment & Duration Targeted Enrollment: 1 Number of Sites: Multi-center Estimated Study Start: 06-Feb-2023 Estimated Primary Completion: 06-Apr-2029 (with patient follow-up tracking through 30-Nov-2027)

4. Subject Selection (Eligibility Criteria)

4.1 Registration / Inclusion Criteria Patients who satisfy all of the registration criteria are subject to this study: 1. Patients with GHD without epiphyseal closure who receive this drug for the first time after the date of contract for this study. 2. Boys who are less than 15 years and girls who are less than 13 years of chronological age at the start of treatment with this drug.

4.2 Exclusion Criteria 1. Patients who have previously received Ngenla prior to study registration. 2. Patients with closed epiphyses. 3. Patients outside the specified age criteria at the start of treatment.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Drug Name/Trade Name: Ngenla (somatrogon) **ATC Code:** H01AC08 **Dosage/Frequency:** Prescribed in accordance with standard daily medical practice prescriptions. **Route of Administration:** Subcutaneous Injection **Duration of Treatment:** Long-term use; patients are followed from the date of their first Ngenla treatment until November 30, 2027.

5.2 Concomitant & Prohibited Therapy Permitted: Standard concomitant care and medications allowed under daily medical practice guidelines for GHD. **Prohibited:** Any therapies strictly contraindicating the use of somatrogon according to its approved local labeling.

6. Study Timeline & Visit Schedule

Note: Because this is an observational cohort study, patient visits align with routine clinical care. | Visit ID | Window (Days) | Key Activities/Procedures | | :--- | :--- | :--- | | **Baseline** | Day 0 | First Ngenla treatment, demographics, and baseline extraction | | **Routine Follow-Up** | Standard Care Intervals | Routine clinical assessments and safety tracking | | **End of Observation** | Up to Nov 30, 2027 | Final data extraction from medical records for the study duration |

7. Outcome Measures (Endpoints)

7.1 Primary Outcomes Evaluated via data extracted from the medical records created in daily medical practice to evaluate safety and effects. 1. The number of patients reporting Adverse Events (AEs) 2. Incidence of Glucose metabolism disorders per exposure period 3. Incidence of Neoplasm per exposure period

7.2 Secondary & Exploratory Endpoints Long-term patient experiences and adherence to the subcutaneous injection regimen under real-world clinical settings.

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Information on adverse events is extracted continuously from the medical records created during routine patient visits. **Serious Adverse Events (SAEs):** Handled and reported according to standard post-marketing pharmacovigilance regulations. **Data Monitoring Committee (DMC):** Managed via the sponsor's standard real-world evidence and pharmacovigilance teams.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: All enrolled patients who received at least one dose of Ngenla and have follow-up data. **Sample Size Justification:** As an observational study, the sample size is driven by real-world prescriptions. **Handling of Missing Data:** Dealt with using standard epidemiological methods for observational missing data.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study is conducted in accordance with Good Pharmacoepidemiology Practices (GPP) and local post-marketing surveillance regulations. **Monitoring Plan:** Investigators complete Case Report Forms (CRFs) based strictly on information extracted from medical records created in daily medical practice. **Audit Trail:** Standardized electronic data capture (EDC) systems will be utilized to ensure data integrity from site inputs to the central sponsor database.

11. Study Identifiers & Governance

Primary ID: C0311011 **Posting ID:** 1137148863420165983 **Registry Number:** NCT05602766 **Sponsor/Lead Organization:** Pfizer **Study Title:** Ngenla Subcutaneous Injection Special Investigation **Official Regulatory Title:** Ngenla® Subcutaneous Injection Special Investigation

12. Clinical Framework (Growth Hormone Deficiency Specific)

Disease Areas / Condition: Growth Hormone Deficiency Without Epiphyseal Closure **Preferred UMLS Name:** Growth Hormone Deficiency

Without Epiphyseal Closure **Medical Methodology:** Standard Daily Medical Practice **Optimization Target:** Normalization of growth velocity and long-term safety

13. Study Procedures & Methodology

Management Pathway: Standard routine clinical pathway for pediatric GHD. **Education Protocol (HCP):** N/A (Non-interventional observational study). **Education Protocol (Patient):** Standard patient instructions for Ngenla subcutaneous administration. **Quality Audit Mechanism:** Periodic review of CRFs against source medical records.

14. Observation & Follow-Up Schedule

Total Duration: Until November 30, 2027 **Onsite Visit Cadence:** Dictated by standard routine medical care. **Remote Monitoring Frequency:** N/A (Data extraction-based) **Checklist Review Interval:** Continuous extraction from updated medical records.
