

1. Administrative & Study Identification

Full Study Title: A Study to Continue the Administration of Deucravacitinib in Participants With Systemic Lupus Erythematosus (SLE) or Discoid and/or Subacute Cutaneous Lupus Erythematosus (DLE/SCLE) Who Have Completed Study IM011074 or Study IM011132
Short Title/Acronym: Deucravacitinib in SLE/CLE Extension (IM011-1263) **Protocol Number:** IM011-1263 **NCT Number:** NCT06875960
Sponsor Name: Bristol-Myers Squibb **Investigational Product:** Deucravacitinib (BMS-986165) **Phase of Development:** Phase 4
Medical Monitor: Bristol-Myers Squibb Medical Monitor

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To evaluate the long-term safety, tolerability, and continued efficacy of deucravacitinib in participants with SLE or DLE/SCLE who have completed previous studies. **Secondary Objectives:** To observe the maintenance of clinical benefit, disease control, and long-term health outcomes during continued therapy.

2.2 Background & Rationale This continuation protocol is designed to address the medical necessity of providing ongoing therapy to participants who successfully completed the protocol-required treatment period of Study IM011074 or Study IM011132. It ensures that patients who are deriving clinical benefit from deucravacitinib (a selective TYK2 inhibitor) do not experience a disruption in their treatment while long-term real-world safety and efficacy data are collected.

3. Study Design & Methodology

3.1 Design Framework Study Type: Interventional (Open-Label Extension/Rollover) **Control Type:** Single-arm **Blinding:** Open-label **Randomization:** Non-Randomized (Single Group Assignment)

3.2 Planned Enrollment & Duration Target \$N\$: All eligible participants completing parent studies (IM011074 or IM011132) **Number of Sites:** Global/Multicenter **Estimated Study Start:** March 2025 **Estimated Primary Completion:** 01-Dec-2026

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Participants must have completed Study IM011074 or Study IM011132 through the protocol-required

treatment period. 2. Participants must be, based on the physician's medical judgement, likely to receive benefit from receiving treatment with deucravacitinib. 3. Participants must have received Investigational Product (IP) within 60 days of enrollment. Exceptions may be granted based upon consultation with BMS.

4.2 Exclusion Criteria 1. Participants must not have any disease or medical condition that, in the opinion of the physician, would make the subject unsuitable for this protocol, would interfere with the interpretation of subject safety or considered unsuitable by the physician for any other reason. 2. Participants must not have any evidence of active Tuberculosis (TB). 3. Other protocol-defined Inclusion/Exclusion criteria apply.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: Deucravacitinib administered at the maintenance dose established in the parent studies. **Route of Administration:** Oral **Duration of Treatment:** 40 weeks

5.2 Concomitant & Prohibited Therapy Permitted: Standard concomitant medications for SLE/CLE and background standard-of-care permitted in parent studies. **Prohibited:** Concurrent administration of other biologics, investigational agents, or targeted immunosuppressive therapies outside of the protocol parameters.

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures
Screening/Rollover	Day -14 to 0	Informed Consent, Medical History review from parent study, Eligibility Check
Baseline	Day 0	Continued IP Dispensation, Vital Signs, First Extension Dose
Interim	Periodic	Safety Labs, Efficacy Assessments (SLE/CLE disease activity scoring), AE monitoring
End of Study	Week 40	Final Vital Signs, Exit Interview, IP Accountability, Transition to commercial drug (if applicable)

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: Long-term safety and tolerability defined by the incidence, severity, and relatedness of Adverse Events (AEs) and Serious Adverse Events (SAEs) over the extension treatment period. **Measurement Method:** Clinical evaluation, laboratory monitoring, and standard AE reporting criteria.

7.2 Secondary & Exploratory Endpoints * Maintenance of clinical response in SLE and DLE/SCLE (e.g., changes from parent study baseline). * Long-term durability of symptom control and prevention of disease flares.

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Continuous collection via HCP interview, patient reporting, and scheduled clinical assessments. **Serious Adverse Events (SAEs):** Reported to the sponsor and regulatory authorities within 24 hours of site awareness. **Data Monitoring Committee (DMC):** Internal safety monitoring mechanisms managed by Bristol-Myers Squibb.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Safety Set (all participants who receive at least one dose of IP in the extension study). **Sample Size Justification:** Not powered for formal statistical hypothesis testing; sample size is determined by the number of participants rolling over from the parent trials. **Handling of Missing Data:** Missing safety data will generally not be imputed; efficacy endpoints will utilize Last Observation Carried Forward (LOCF) or Mixed-Model Repeated-Measures (MMRM) where appropriate.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Clinical Practice (GCP) and the Declaration of Helsinki. **Monitoring Plan:** Periodic onsite and remote monitoring visits ensuring protocol adherence. **Audit Trail:** Validated eCRF entries with audit trails, data clarification forms, and continuous database cleaning.

11. Study Identifiers & Governance

Primary ID: IM011-1263 **Registry Number:** NCT06875960 **Sponsor/Lead Organization:** Bristol-Myers Squibb **Study Title:** Deucravacitinib SLE/CLE Extension Study **Official Regulatory Title:** A Study to Continue the Administration of Deucravacitinib in Participants With Systemic Lupus Erythematosus (SLE) or Discoid and/or Subacute Cutaneous Lupus Erythematosus (DLE/SCLE) Who Have Completed Study IM011074 or Study IM011132

12. Clinical Framework (SLE/CLE Specific)

Primary Condition: Systemic Lupus Erythematosus (SLE) and Cutaneous Lupus Erythematosus (DLE/SCLE) **Diagnosis Threshold:** Confirmed SLE/CLE and successful completion of IM011074 or IM011132 **Medical Methodology:** Selective TYK2 Inhibition **Optimization Target:** Maintenance of disease remission/low disease activity

13. Study Procedures & Methodology

Management Pathway: Open-label continuation and active monitoring **Education Protocol (HCP):** Investigator training on extension safety protocols **Education Protocol (Patient):** Counseling on long-term study expectations and safety reporting **Quality Audit Mechanism:** Safety signal tracking and adherence monitoring

14. Observation & Follow-Up Schedule

Total Duration: 40 weeks **Onsite Visit Cadence:** Scheduled per extension protocol intervals **Remote Monitoring Frequency:** Intermittent phone or telehealth follow-ups for safety **Checklist Review Interval:** Routine study visits
